Table 5 reports both the total project and cumulative community risk impacts at the sensitive receptors most affected by the project with sewer treatment (i.e., the MEI). Without mitigation, the total project's community risk from project construction would not exceed the single-source maximum increased cancer risk, $PM_{2.5}$ concentration, or HI thresholds. In addition, the combined unmitigated cancer risk, $PM_{2.5}$ concentration, and HI values would not exceed their respective cumulative thresholds.

Table 5. Cumulative Community Risk Impacts from Combined TAC Sources at MEI

Source	Cancer Risk (per million)	$PM_{2.5}$ concentration ($\mu g/m^3$)	Hazard Index
Total Project Impacts			
Off-site Sewer Construction Unmitigated	0.02 (infant)	<0.01	<0.01
Project Residential Site Construction	3.6 (infant)	0.02	<0.01
BAAQMD Single-Source Threshold	***10***	***0.3***	***1.0***
Exceed Threshold?	*No*	*No*	*No*
Cumulative Impacts			
Mission View Drive, ADT 14,020	1.5 (infant)	0.09	<0.01
Combined Sources Unmitigated	5.12 (infant)	<0.12	<0.03
BAAQMD Cumulative-Source Threshold	***100***	***0.8***	***10.0***
Exceed Threshold?	*No*	*No*	*No*

♦ ♦ ♦

This concludes the assessment for air quality and health risk impacts due to the construction of an off-site sanitary sewer line for The Crosswinds project. Please feel free to contact us with any questions on the analysis or if we can be of further assistance.

Sincerely,

Casey Divine
Consultant
Illingworth & Rodkin, Inc.

(I&R #20-161)

Supporting Documentation

Attachment 1 includes the CalEEMod output for project construction criteria air pollutant emissions. Also included are any modeling assumptions.

Attachment 2 includes the EMFAC2017 emissions modeling. The input files for these calculations are voluminous and are available upon request in digital format.

Attachment 3 includes the construction health risk assessment. AERMOD dispersion modeling files for this assessment, which are quite voluminous, are available upon request and would be provided in digital format.

Attachment 1: CalEEMod Modeling Inputs and Outputs

Off-Site Sewer Line, The Crosswinds, Morgan Hill, CA - Construction Impacts - Without Mitigation
Maximum DPM Cancer Risk and PM2.5 Calculations From Construction
Impacts at Off-Site MEI Location - 1.5 meter receptor height

Cancer Risk (per million) = CPF x Inhalation Dose x ASF x ED/AT x FAH x 1.0E6

Where: CPF = Cancer potency factor $(mg/kg\text{-}day)^{-1}$
ASF = Age sensitivity factor for specified age group
ED = Exposure duration (years)
AT = Averaging time for lifetime cancer risk (years)
FAH = Fraction of time spent at home (unitless)

Inhalation Dose = C_{air} x DBR x A x (EF/365) x 10^{-6}

Where: C_{air} = concentration in air ($\mu g/m^3$)
DBR = daily breathing rate (L/kg body weight-day)
A = Inhalation absorption factor
EF = Exposure frequency (days/year)
10^{-6} = Conversion factor

1.0 INTRODUCTION

The Crosswinds at Morgan Hill, LLC (owner) are planning a residential development on vacant land comprised of six parcels located along the northwest side of Half Road, between Mission View Drive and DePaul Drive, Morgan Hill (the APNs are 728-30-001, -002, -003, -004, -006, -009, and the project address is regarded as 1105 Half Road, Morgan Hill). To facilitate development, eight existing trees require removal, and I have been retained by the owner to prepare this *Arborist Report* as part of their planning submittal. Specific tasks assigned to execute are as follows:

- Review the following documents: [1] *Vesting Tentative Map* set, dated 6/8/20, prepared by RJA, and [2] a Tree Removal Permit application, not dated, prepared by the applicant.
- Visit the site on 2/3/21 to identify and photograph the 8 trees.
- Measure each tree's trunk diameter pursuant to the Morgan Hill Municipal Code. Diameters are rounded to the nearest inch, and trees listed with more than diameter one are formed by multiple trunks. Circumferences for Ordinance-size trees are provided on the table in Exhibit B (denoted as "C=" within the 10th column).
- Identify which trees are defined by the Morgan Hill Code as being of Ordinance-size,[1] as well as whether any are defined as being indigenous[2] to the Morgan Hill region.
- Estimate each tree's height and average canopy spread (rounded to the nearest fifth).
- Ascertain each tree's health, structural integrity and form, and assign an overall condition rating (e.g. good, fair, poor or dead).
- Document any health, structure and/or hardscape issues.
- Assign numbers to the trees, and plot each onto the *Conceptual Tree Removal Exhibit*, dated 1/10/20, prepared for the referenced Tree Removal Permit application.
- Nail round metal tags with corresponding, engraved numbers onto each tree (do not confuse with older tags found on 7 and 8).
- Prepare this report, and submit via email as a PDF document.

[1] Section 12.32.020(G) of the Morgan Hill Code defines an Ordinance-size tree as having a single trunk with a diameter of 12.73" (40" circumference) for nonindigenous species, and 5.73" (18" circumference) for indigenous species (see footnote 2 below) measured 54" above ground or immediately below the lowest branch, whichever is lower. Commercial tree farms and nonindigenous trees in residential zones and orchards (including fruit trees) are exempt.

[2] Section 12.32.020(I) of the Morgan Hill Municipal Code defines indigenous trees to the Morgan Hill region as oaks (all types), California bays, madrones, sycamores and alders.

2.0 TREE COUNT AND COMPOSITION

Eight (8) trees of six various species were inventoried for this report. They are sequentially numbered and tagged as 1 thru 8, and the table below identifies their common names, assigned numbers, counts and overall percentages.

NAME	TREE NUMBER(S)	COUNT	% OF TOTAL
California buckeye	1	1	13%
Monterey pine	2	1	13%
Pepper tree	3	1	13%
Carolina laurel cherry	4 & 5	2	25%
Chaste tree	6	1	13%
Ponderosa pine	7 & 8	2	25%
	Total	**8**	**100%**

Specific information regarding each tree is presented within the table in Exhibit A. The trees' numbers and approximate locations can be viewed on the site map in Exhibit B, and photographs are presented in Exhibit C.

Trees #1 thru 6 are situated within the property address of 1105 Half Road, Morgan Hill (APN 728-30-004). Trees #7 and 8 are located adjacent to Half Road, situated immediately northeast of the driveway leading to the 1105 property address. All are within direct conflict with the proposed development and require removal.

All are defined by the Morgan Hill Code as being nonindigenous (i.e. not native to the Morgan Hill region).

Four (4) are defined by the Morgan Hill Code as being of Ordinance-size; they include #2, 3, 7 and 8. Their trunk circumferences are as follows: 82 inches for #2, 138 inches for #3, 79 inches for #7, and 101 inches for #8.

3.0 TREE CONDITIONS

Each tree has been assigned an overall condition rating based on their health and structural condition. These ratings include good, fair, poor or dead, and descriptions and assigned trees are presented below. Regarding those of Ordinance-size, #2 and 3 are regarded as being fair condition, and #7 and 8 poor condition.

Good: Applies to none.

These trees appear relatively healthy and structurally stable; have no apparent, significant health issues or structural defects; present a good potential for contributing long-term to the site; and seemingly require only periodic or regular care and monitoring to maintain their longevity and structural integrity.

Fair: Applies to #2 and 3.

These trees appear in reasonably viable condition, although have health and/or structural issues which may or may not be reasonably addressed and properly mitigated, and frequent care is typically required for their remaining lifespan. They can potentially contribute to the site, but do require regular and more frequent care compared to those appearing in good condition.

Poor: Applies to #1, 6, 7 and 8.

These trees have significant health and/or structural issues expected to worsen regardless of tree care measures employed (i.e. beyond likely recovery). As a general guideline, they are not suitable for incorporating into the future landscape, regardless of future site improvements.

Dead: Applies to #4 and 5.

These two are small ornamental trees which have been dead for some time. They cannot recover and should be removed before the site becomes occupied.

4.0 ASSUMPTIONS AND LIMITING CONDITIONS

- All information presented herein covers only the inventoried trees, and reflects their size, condition, and areas viewed from the ground on 2/3/21.
- The documented condition and suitability ratings of dormant trees are subject to change once the trees can be observed following their seasonal regrowth of leaves.
- Observations were performed visually without probing, coring, dissecting or excavating.
- The assignment pertains solely to trees listed in Exhibit A. I hold no opinion towards other trees on or surrounding the project area.
- I cannot provide a guarantee or warranty, expressed or implied, that deficiencies or problems of any trees or property in question may not arise in the future.
- No assurance can be offered that if all my recommendations and precautionary measures (verbal or in writing) are accepted and followed the desired results may be achieved.
- I cannot guarantee or be responsible for the accuracy of information provided by others.
- I assume no responsibility for the means and methods used by any person or company implementing the recommendations provided in this report.
- Information provided herein represents my opinion. Accordingly, my fee is in no way contingent upon the reporting of a specified finding, conclusion or value.
- Numbers shown on the site map in Exhibit B are solely intended to represent a tree's approximate trunk location and should not be construed as surveyed points.
- This report is proprietary to me and may not be copied or reproduced in whole or part without prior written consent. It has been prepared for the sole and exclusive use of the parties to who submitted for the purpose of contracting services provided by David L. Babby.
- If any part of this report or copy thereof be lost or altered, the entire evaluation shall be invalid.

TREE INVENTORY TABLE

(two sheets)

TREE INVENTORY TABLE

TREE/ TAG NO.	TREE NAME	SIZE			CONDITION				Ordinance-size Tree	Indigenous Tree
		Trunk Diameter (in.)	Height (ft.)	Canopy Spread (ft.)	Health Condition (100%=Best, 0%=Worst)	Structural Integrity (100%=Best, 0%=Worst)	Form (100%=Best, 0%=Worst)	Overall Condition (Good/Fair/Poor/Dead)		
1	California buckeye (*Aesculus californica*)	8, 7, 6, 5, 4	20	30	60%	20%	30%	Poor		

Comments: Dormant. Multiple trunks represent stump sprouts and form weak attachments. Top has been reduced in past at varying heights between 6 to 9'. Grows SW away from existing structure. Asphalt surrounding base is raised and buckled.

2	Monterey pine (*Pinus radiata*)	26	45	50	40%	50%	70%	Fair	X (C=82")	

Comments: Tree is partly surrounded by a treehouse. Large girdling root along the trunk's east side. Minor infestation of red turpentine beetles and pitch moth larvae. Large deadwood throughout. Branch dieback is abundant most likely due to pine pitch canker. Branching begins at 4.5' high. A few older, large limbs/branches were cut from the lower trunk.

3	Pepper tree (*Schinus molle*)	44	40	45	60%	30%	40%	Fair	X (C=138")	

Comments: Structure is formed by three codominant leaders emerging at 10' high. Large deadwood throughout, and has a 17" tall by 6" wide by 2+' deep hollow along the trunk's east side at 4'. Has excessive limb weight and some dieback along canopy's top.

4	Carolina laurel cherry (*Prunus caroliniana*)	6	20	-	0%	0%	0%	Dead		

Comments: Dead.

5	Carolina laurel cherry (*Prunus caroliniana*)	7	20	-	0%	0%	0%	Dead		

Comments: Dead.

TREE INVENTORY TABLE

TREE/ TAG NO.	TREE NAME	SIZE			CONDITION				Ordinance-size Tree	Indigenous Tree
		Trunk Diameter (in.)	Height (ft.)	Canopy Spread (ft.)	Health Condition (100%=Best, 0%=Worst)	Structural Integrity (100%=Best, 0%=Worst)	Form (100%=Best, 0%=Worst)	Overall Condition (Good/Fair/Poor/Dead)		
6	Chaste tree (*Vitex agnus-castus*)	10, 10, 7	30	40	60%	30%	30%	Poor		

Comments: Dormant. Low crown, and the 7" trunk grows horizontal within a few feet above ground. Irregular, asymmetrical and broad form. Bark is missing along the lower sections of all three trunks, some with decay. Grows with a pronounced lean away from the existing home. Ivy grows within the canopy's NE portion.

7	Ponderosa pine (*Pinus ponderosa*)	25	50	30	40%	30%	40%	Poor	X (C=79")	

Comments: Asymmetrical, mostly one-sided canopy away from #8. History of limb failure. Has a very thin, sparse canopy with deadwood and dieback. There is a dead, decaying stump at base (of prior tree). Has an old tag #125.

8	Ponderosa pine (*Pinus ponderosa*)	32	60	35	50%	70%	40%	Poor	X (C=101")	

Comments: Asymmetrical, mostly one-sided canopy away from #7, and its dominant limb structure extends towards SE. Large deadwood and excessive branch weight. Has three competing, multiple tops. Has an old tag #124.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
The site is a rural setting within an orchard. The terrain is flat with the developed area containing a c. 1957 Ranch Style house, a barn, tanks, and sheds.
The single-story house is an eclectic variation of the California Ranch Style in an "L" form. The horizontal front façade has a band of windows above a concrete block wall, a slightly recessed covered front porch with the entry door, and side lights. The remainder of the front wall has high windows and is behind a screen. The roof extends beyond the building to cover a patio/carport. A second parking area is behind a concrete block wall at the end of the building. The rear facade is flat with metal sliding style windows.(bedrooms).

P.3 Description continued:
The side rear façade has a recessed porch with French doors. The roof extends with exposed eaves behind a facia board. The stucco surface is smooth texture with no details. The building is common economical type construction without artistic style.

Across a parking area from the front of the house is a utility barn. The single-story, rectangular form is constructed of vertical board and batt on wood frame. The structure hs a pitched roof and concrete foundation. The division of space indicates it was used as a packing shed and for equipment storage. The remains of a covered area at the end indicate the space was likely also used for sorting and packing fruit.

Contemporary and temporary tanks are behind the barn.

There is no formal landscape plan and no natural features beyond the flat terrain. The house and barn are vacant and in poor condition.

Photographs: the photographs were taken on June 1, 2019 using digital format.

Period of Significance 1957-2000 **Property Type** house **Applicable Criteria** NA
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The property is not significant to the history, heritage, or architecture of Morgan Hill and does not qualify for listing in the California Register of Historical Resources or under the Morgan Hill Historic Preservation Ordinance. The property is not associated with persons or events of significance and is not an artistic or important variation of the California Ranch style.

The history of Morgan Hill has been published in scholarly works; this brief summary is to show the context for the subject property in the history of Morgan Hill and Santa Clara County in the mid-century 1950-2000.

(This space reserved for official comments.)

At the turn of the century, 1900, agriculture was the primary industry in South Santa Clara County. Acres of orchards and farmland were tended and owned by Americans and immigrants who came from Europe, Asia, Canada, and Mexico. By the first decades of the 1900s, there were many ranchers and farmers with less than 200 planted acres who supplied the canneries and fruit dryers located along the length of the County. Canneries were established, and communities grew in relation as a result of the agricultural expansion. Box factories, can factories, shipping centers, paper mills, and label makers were all part of the strongest growth industry in Santa Clara County between the years 1900-1936 - with prunes at the top of the list for the export market. While there were economic and over-production cycles, nothing was as devastating to prune growers as the boycott of California Prunes and dried fruit by Germany and its allies in 1936. The European market was a large part of the industry, and the world glut of prunes that resulted from the boycott caused financial ruin for many ranchers. Those who could hold onto their land, replanted orchards to take advantage of improved shipping for fresh fruit and those fruits that canned well. Some turned to vineyards and some to row crop farming. Amid this economic turmoil, all growers and processors were helped by the advent of WWII and the federal government contracts to provide food supplies to the troops. At the end of WWII and the end of the lucrative federal contracts, the industry entered another challenge, frozen and prepared foods. Strawberries were the first locally frozen crops to come from South County. While the rest of Santa Clara County experienced a shift from an agricultural basis in the 1950s to subdivisions and high tech, South County remained primarily agricultural into the 1970s when the spread of population from the industrial centers of Silicon Valley extended to South County. As it had to the north, the demand for housing spurred the redevelopment of agricultural land to residential and commercial subdivisions. Initially, the subdivisions tended to be along the west side and Monterey Road. With the completion of Highway 101, development patterns moved to the eastern side, leaving the center of the valley in agriculture and the last to be subdivided for development.

1105 Half Road

The agricultural property was owned by William Pierce in 1912 when it was sold to Fernand Kraft. Kraft was from Germany, and his wife, Elin, was from Sweden; both became naturalized citizens. Kraft farmed the land and then planted fruit trees, likely prunes.[1] In the mid-1930s, his occupation listed in the county voter rolls and City Directories changed to farmer. This appears to be due to the boycott on dried fruit going to Germany and the Axis countries in 1936. He remained a farmer until the land was sold to Harry M. Sakai, Yukino Sakai, and Freddie Sakai.

[1] The Santa Clara County Voters rolls list Fernand Kraft as an orchardist until the late 1930s when he is listed as a farmer.

The sale was recorded on January 28, 1955. The Sakai family planted cherry trees on part of the acreage and built a house and barn in 1957. The house and barn were constructed for Harry Sakai who lived on the property with his wife, Margie, at RD 2 Box 489 until selling the land in the late 1970s and moving to 779 Via del Castille in Morgan Hill. The next owners were Charles L. and Patricia A. Hann. Charles operated CL Hann Industries, a machine shop on Chestnut Street in San Jose, before purchasing the land and moving to Morgan Hill. The Hanns continued the agricultural use and lived in the house surrounded by fruit trees. In 1996, the property was transferred to Patricia A. Hann, and then sold by her to Llagas LLC on April 6, 2000. For the last several years, the house has not been occupied by the owner; however, the orchard has been maintained.

Evaluation of Significance

The evaluation considers the criteria adopted by the City of Morgan Hill in the Zoning Code Chapter 18.60 Cultural Resources Preservation, Section 18.60.050 Cultural resource designation – Criteria. To comply with the California Environmental Quality Act – Guidelines, the evaluation considers the criteria of the California Register of Historical Resources and the National Register of Historic Places

Morgan Hill Cultural Resources Designation- Criteria

For purposes of this Chapter, an improvement may be designated a cultural resource by the planning commission, and any area within the city may be designated as a historic district by the commission pursuant to Section 2.36.040 if it meets one or more of the following criteria.

A. Historical, Cultural Importance.

1. *Has significant character, interest, or value, as a part of the development, heritage, or cultural characteristics of the city, county, state or nation; or is associated with the life of a person(s) significant in the past,*

   The owners of the property, Kraft and Sakai were part of the agricultural community. Research did not find unique historical importance associated with the owners. Both families were immigrants, and both were fruit ranchers in a community that had many immigrants and fruit ranchers.

2. *is the site of a historic event with a significant effect upon society*,

   The site is not associate with a significant historical event.

3. *Exemplifies the cultural, political, economic, social, or historical heritage of the community;*

   The orchard and operations/storage area of the parcel are typical of the rural orchard properties in South County. It is, or was, part of the broader economic heritage of Santa Clara County.

   The property is not associated with the lives of people significant in the past. No historic event was found to have occurred on the property. The site was of a broad pattern yet does not individually exemplify the cultural, political, economic, social, or historical heritage of the community.

B. *Architectural, engineering Importance:*

1. *Portrays the environments in an era of history characterized by a distinctive architectural style.*

   The ancillary buildings and structures are utilitarian, used for storage and as such are part of a broad pattern of agricultural use in the Morgan Hill area but do not exhibit significant character, interest, or value in communicating the cultural characteristics of the city, county, or region. The house, a variation of the Mid-century Ranch Style is not an artistic or well-designed Mid-century Ranch Style.

2. *Embodies those distinguishing characteristics of an architectural type or engineering specimen*.

   The house shows characteristics of Mid-century Ranch Style architecture; however, the combination of elements is not artistic or unique.

3. *Is the work of a designer or master builder whose individual work has significantly influenced the development of Morgan Hill.*

   The design of the house does not represent the work of a master builder.

4. *Contains elements of design, detail, materials, or craftsmanship which represent a significant innovation; or*

   As stated above, the house - the main building on the property - is an economical version of the Mid-century Ranch style, while the structures are primarily storage sheds c. 1960s-70s that lack distinctive architecture or engineering qualities.

C. *Geographic Importance:*

1. *By being part of or related to a square, park, or other distinctive area, it should be developed or preserved according to a plan based on a historic, cultural, or architectural motif.*

   The site is part of an agricultural area. Agriculture is and was an important economic industry in Morgan Hill. This parcel is not individually distinctive.

2. *Owing to its unique location or singular physical characteristics, it represents an established and familiar visual feature of a neighborhood, community, community, or city*.

   The subject property is not associated with a square, park, or other distinctive area. The orchard land was part of larger ranches that were divided, and do not relate to the previous ranches or owners. The orchards have been replanted, and none of the structures or buildings on the property are distinctive.

   The property is in an area of rural parcels redeveloping to residential uses and is not a unique location.

D. Archaeological Importance:

1. *Has yielded, or may be likely to yield information in pre-history. Ord. 1111 N.S, Section 50 (part), 1992; ord; N.S. Section 50 (part), 1992: Ord 980 N.S. Section 3 (part), 1990)*

   The site has been disturbed by agricultural use for over 100 years, in addition to the construction of buildings. It is unlikely to yield information important in the study of pre-history. Should areological materials be found during any phase of future construction, local, county, and state law must be observed.

California Register of Historical Resources - Eligibility Statement

The criteria for listing historical resources in the California Register are consistent with those developed by the National Park Service for listing resources in the National Register of Historic Places but have been modified for state use in order to include a range of historical resources which better reflect the history of California. A historical resource must be significant at the local, state, or national level under one or more of the following four criteria;

1. *It is associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United*

States.

2. *It is associated with the lives of persons important to local, California, or national history;*
3. *It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of a master or possesses high artistic values; or*
4. *It has yielded, or is likely to yield, information important to the prehistory or history of the local area, California, or the nation*.

In addition, the resource must retain enough of its historic character or appearance to be recognizable as a historic property and to convey the reason for its significance.

Research did not uncover information showing that the subject property was associated with individuals or events that have made a significant contribution to the broad patterns of local or regional history, or to the cultural heritage of Morgan Hill, Santa Clara County, California, or the United States. The Kraft family immigrated to Santa Clara County and began business in San Jose before moving to Morgan Hill and tending fruit trees. The Sakai family arrived from Japan in 1908, locating in Washington State where their children, Harry, Freddy, and Yukino, were born. After being interred in Wyoming, the family came to the Santa Clara Valley and purchased property to farm and raise cherries. They had a Mid-century Ranch house constructed along with vernacular agricultural structures on the property. None of the buildings or structures possess distinctive characteristics. When the property was evaluated as a rural unit, it was concluded that it did not meet the criteria because the utilitarian structures and buildings are not distinctive or artistic and do not show unique engineering. Thus, it was concluded that the property is not eligible for listing in the California Register.

National Register of Historic Places – Standards (Criteria)

The National Register of Historic Places has established standards for evaluating the significance of resources that are important in the heritage of the nation. Historic resources may be considered important at the local level, state level, or national level. To apply the standards, the resource must be considered within significant historical contexts. The standards, age, and integrity statements follow;

1. *A property must be fifty years old*
2. *The resource must retain architectural and historical integrity.*
3. *The resources must meet at least one of the following criteria*

a. *are associated with events that have made a significant contribution to the broad patterns of our history; or*
b. *are associated with the lives of persons significant in our past; or*
c. *embody the distinctive characteristics of a type, period, or method that possess high artistic values, or that represents a significant and distinguishable entity whose components may* lack individual distinction; or
d. have yielded, or may be likely to yield, information important in prehistory or history.

Research did not uncover information that the subject property was associated with individuals or events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States. The structure's lack of significant historical associations and common design are the factors in determining that the property is not eligible for listing in the National Register of Historic Places.

Property that is not eligible for listing in the California Register of Historical Resources is not considered to be significant under the criteria of the National Register of Historic Places and is not eligible for listing.

Based upon the lack of significant architecture, or significant historical associations), the subject property is not eligible for listing in the National Register of Historic Places, the California Register of Historical Resources, or consideration under the Morgan Hill Zoning Ordinance 18.60.050.

California Environmental Quality Act (CEQA)

CEQA defines a historical resource as a resource that meets one or more of the following criteria; (1) listed in, or determined eligible for listing in, the California Register of Historical Resources, (2) listed in a local register of historical resources as defined in PRC Section 5020.1 (k), (3) identified as significant in a historical resource survey meeting the requirements of PRC Section 5024.1(g), or (4) determined to be a historical resource by a project's lead agency (PRC Section 21084.1 and CEQA Guidelines Section 15064.5 (a). A historic resource consists of;

> "any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational social, political, military, or

cultural annals of California." Generally, a resource shall be considered "historically significant" if the resource meets the criteria for listing in the California Register of Historical Resources"[2]

A literature search showed that the subject property is not listed in the Historic Properties Directory for Santa Clara County (2011) or the Morgan Hill Historic Resources Inventory. This study and evaluation of the attributes of the property found the property does not meet the criteria of the California Register of Historical Resources or the City of Morgan Hill's Historic Preservation Zoning criteria. Thus, the property does not meet the criteria of any register as a "historical resource" under CEQA.

and rear are punctuated with the replacement windows. The siding is dropped horizontal board on the rear and west side, with a change to . vertical board and bat for the front addition. The building appears to have started with a c. 1900 rectangular form and added a large section to create a residential style with a low-pitched roof and side wing c. 1955. Later alterations include removing the original windows from both sections. The building does not have a defined style.
There is no landscaping, a shed and fencing are the other features close to the building on the property. The primary purpose of the site is for large trees in wood boxes- tree storage more than a tree farm.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The property is not significant to the history, heritage or architecture of Morgan Hill and does not qualify for listing in the California Register of Historic Resources or under the Morgan Hill Historic Preservation Ordinance. The property is not associated with persons or events of significance and is not an artistic or important variation of a defined style.

The history of Morgan Hill has been published in scholarly works, this brief summary is to show the context for evaluating the subject property within the twentieth century history of Morgan Hill and Santa Clara. This appears to be when the early part was constructed and newer section of the building was added and the building was transformed to residential use, . (Continued)

(Sketch Map with north arrow required.)

At the turn of the century, 1900, agriculture was the primary industry in South Santa Clara County. Acres of orchards and farmland were tended and owned by Americans and the immigrants who came from Europe, Asia, Canada, and Mexico. By the first decades of the 1900s, there were many ranchers and farmers with less than 200 planted acres who supplied the canneries and fruit dryers located along the length of the County. Canneries were established, and communities grew in relation as a result of the agricultural expansion. Box factories, can factories, shipping centers, paper mills, and label makers were all part of the strongest growth industry in Santa Clara County between the years 1900-1936 - with prunes at the top of the list for the export market. While there were economic and over-production cycles, nothing was as devastating to prune growers as the boycott of California Prunes and dried fruit by Germany and its allies in 1936. The European market was a large part of the industry, and the world glut of prunes that resulted from the boycott caused financial ruin for many ranchers. Those who could hold onto their land, replanted orchards to take advantage of improved shipping for fresh fruit and those fruits that canned well. Some turned to vineyards and some to row crop farming. Amid this economic turmoil, all growers and processors were helped by the advent of WWII and the federal government contracts to provide food supplies to the troops. At the end of WWII and the end of the lucrative federal contracts, the industry entered another challenge, frozen and prepared foods. Strawberries were the first locally frozen crops to come from South County. While the rest of Santa Clara County experienced a shift from an agricultural basis in the 1950s to subdivisions and high tech, South County remained primarily agricultural into the 1970s when the spread of population from the industrial centers of Silicon Valley extended to South County. As it had to the north, the demand for housing spurred the redevelopment of agricultural land to residential and commercial subdivisions. Initially, the subdivisions tended to be along the west side and Monterey Road. With the completion of Highway 101, development patterns moved to the eastern side, leaving the center of the valley in agriculture and the last to be subdivided for development.

Cochran Road West of De Paul Ave.

The agricultural property was owned by William Pierce in 1912 when it was sold to Fernand Kraft. Kraft was from Germany, and his wife, Elin, was from Sweden; both became naturalized citizens. Over a period of several years Kraft purchased several adjoiningr parcels. Kraft farmed the land and then planted fruit trees, likely prunes.[1] In the mid-1930s, his occupation listed in the county voter rolls and City Directories changed from orchards to farmer. This appears to be

[1] The Santa Clara County Voters rolls list Fernand Kraft as an orchardist until the late 1930s when he is listed as a farmer.

due to the boycott on dried fruit going to Germany and the Axis countries in 1936. He remained a farmer until the land was sold to Harry M. Sakai, Yukino Sakai, and Freddie Sakai. The sale was recorded on January 28, 1955. The Sakai family planted cherry trees. According to the aerial photographs from the USGS library, the property remained, planted in orchards when it was sold in 1963 to Lawrence and Helen Chew and Francis and Beatriz Mar. Both L:awrence and Helen worked at the Giant Thrift Pharmacy. The Lawrence & Helen Chew Trust sold the parcel in 2004 to Llagas LLC. During this time, the land was cleared of the fruit trees and then rented to Michael Bonfonte , Bonfonte Nursery, for tree storage. Mature trees with their roots systems in wood boxes trees were stored on the property in neat rows.[2] In January 2019, the land was sold to Morgan Hill Ventures LLC. . The tree storage continued and was the major use of the land in 2019..[3] The boxed trees appear to have been stored for future use in a golf course or other large project. Eventually tress filled most of the 14 acres and included several species.

Michael Bonfante and Bonfonte Nursery

John Bonfante began the Nob Hill Foods markets in 1934, named after a knoll in Morgan Hill the business grew to 9 markets before John died in 1977. Son Michael became the executive along with his sister. Under their leadership, the regional chain grew to 27 markets before it was sold in 1997 to Railey's foods, also a family owned business. While running the family business, Michael purchased a nursery in the early 1980s and began exhibiting his interested in the science and beauty of trees. It was the Scott's Valley, Circus Tress grown by Axel Erlandson that fascinated Bonfante. In 1983, he acquired the Circus Trees, moving them to Bonfante Nursery on Hecker Pass Road in Gilroy. The tree park initially opened as Nob Hill Family Park- for the company employees, then Hecker Pass Gardens- other corporate use, and after receiving the funds from the sale of Nob Hill Foods the park became Bonfante Gardens a fully developed horticultural themed amusement park. The concept was to entertain children while giving then lessons about the environment, and trees in particular. After a turn in the economy of parks, the property was sold to the City of Gilroy and became Gilroy Gardens.[4] [5]By this time Bonfante had acquired additional trees and storage became an issue. Trees from Bonfante Nursery in

Gilroy were moved to Morgan Hill and stored on the subject property in the 1990s.[6] Associated with the storage of the trees is a caretaker who lives on site.

Evaluation of Significance

The evaluation considers the criteria adopted by the City of Morgan Hill in the Zoning Code Chapter 18.60 Cultural Resources Preservation, Section 18.60.050 Cultural resource designation – Criteria. To comply with the California Environmental Quality Act – Guidelines, the evaluation considers the criteria of the California Register of Historical Resources and the National Register of Historic Places

Morgan Hill Cultural Resources Designation- Criteria

For purposes of this Chapter, an improvement may be designated a cultural resource by the planning commission, and any area within the city may be designated as a historic district by the commission pursuant to Section 2.36.040 if it meets one or more of the following criteria.

A. *Historical, Cultural Importance.*

1. *Has significant character, interest, or value, as a part of the development, heritage, or cultural characteristics of the city, county, state or nation; or is associated with the life of a person(s) significant in the past,*

   The owners of the property did not live on the property. They were part of the agricultural community, including the tree storage. Research did not find unique historical importance associating this property with the owners. Storing trees for Bonfonte Nursery is not a direct association to Michael Bonfante. The building on the property does not have significant character or interest associated with the owners or occupants.

2. *Is the site of a historic event with a significant effect upon society*,

   The site is not associate with a significant historical event.

3. *Exemplifies the cultural, political, economic, social, or historical heritage of the community;*

   There is no remains of the orchard or row crop use. The tree storage is an unusual agricultural use although it does not exemplify the heritage of the

[6] Telephone interview with Angle at Western Tree Nursery

community.. It is and was, part of the broader economic heritage of Santa Clara County.

The property is not associated with the lives of people significant in the past. No historic event was found to have occurred on the property. The site was part of a broad agricultural pattern yet does not individually exemplify the cultural, political, economic, social, or historical heritage of the community.

B. Architectural, engineering Importance:

1. *Portrays the environments in an era of history characterized by a distinctive architectural style.*

   The main building is a dramatically enlarged and remodeled building c. 1900 with the addition and alterations c. 1955-2000. The hodgepodge of building does not portray a distinctive architectural style

2. *Embodies those distinguishing characteristics of an architectural type or engineering specimen*.

   The building does not exhibit a defined style of architecture and the wood frame is not an important engineering specimen.

3. *Is the work of a designer or master builder whose individual work has significantly influenced the development of Morgan Hill.*

   The design of the building does not represent the work of a master designer or builder.

4. *Contains elements of design, detail, materials, or craftsmanship which represent a significant innovation; or*

   As stated above, the main building on the property - is a hodgepodge of construction elements and does not represent significant innovation.

C. Geographic Importance:

1. *By being part of or related to a square, park, or other distinctive area, it should be developed or preserved according to a plan based on a historic, cultural, or architectural motif.*

   The site is part of an agricultural area. Agriculture is and was an important economic industry in Morgan Hill. This parcel is not individually distinctive.

2. *Owing to its unique location or singular physical characteristics, it represents an established and familiar visual feature of a neighborhood, community, community, or city*.

   The subject property is not associated with a square, park, or other distinctive area. The tree storage land was part of larger ranches that were divided, and does not relate to the previous ranches or owners. None of the structures or buildings on the property are distinctive.

   The property is in an area of rural parcels where several of the agricultural parcels have been redeveloped to residential uses..

D. Archaeological Importance:

1. *Has yielded, or may be likely to yield information in pre-history. Ord. 1111 N.S, Section 50 (part), 1992; ord; N.S. Section 50 (part), 1992: Ord 980 N.S. Section 3 (part), 1990)*

   The site has been disturbed by agricultural use for over 100 years, in addition to the construction of buildings (no longer extant). It is unlikely to yield information important in the study of pre-history. Should areological materials be found during any phase of future construction, local, county, and state law must be observed.

California Register of Historical Resources - Eligibility Statement

The criteria for listing historical resources in the California Register are consistent with those developed by the National Park Service for listing resources in the National Register of Historic Places but have been modified for state use in order to include a range of historical resources which better reflect the history of California. A historical resource must be significant at the local, state, or national level under one or more of the following four criteria;

1. *It is associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States.*
2. *It is associated with the lives of persons important to local, California, or national history;*
3. *It embodies the distinctive characteristics of a type, period, region, or method of*

construction, or represents the work of a master or possesses high artistic values; or

4. *It has yielded, or is likely to yield, information important to the prehistory or history of the local area, California, or the nation*.

In addition, the resource must retain enough of its historic character or appearance to be recognizable as a historic property and to convey the reason for its significance.

Research did not uncover information showing that the subject property was directly associated with individuals or events that have made a significant contribution to the broad patterns of local or regional history, or to the cultural heritage of Morgan Hill, Santa Clara County, California, or the United States. The building on the property appears to have been moved to the current site and both enlarged and altered in ways that destroy to architectural integrity of a c. 1900 rectangular building. When the property was evaluated as a rural unit, it was concluded that it did not meet the criteria because the buildings and use are not distinctive. Thus, it was concluded that the property is not eligible for listing in the California Register.

National Register of Historic Places – Standards (Criteria)

The National Register of Historic Places has established standards for evaluating the significance of resources that are important in the heritage of the nation. Historic resources may be considered important at the local level, state level, or national level. To apply the standards, the resource must be considered within significant historical contexts. The standards, age, and integrity statements follow;

1. *A property must be fifty years old*
2. *The resource must retain architectural and historical integrity.*
3. *The resources must meet at least one of the following criteria*
   a. *are associated with events that have made a significant contribution to the broad patterns of our history; or*
   b. *are associated with the lives of persons significant in our past; or*
   c. *embody the distinctive characteristics of a type, period, or method that possess high artistic values, or that represents a significant and distinguishable entity whose components may* lack individual distinction; or
   d. have yielded, or may be likely to yield, information important in prehistory or history.

Research did not uncover information that the subject property was associated with individuals or events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States. The structure's lack of significant historical associations and common design are the factors in determining that the property is not eligible for listing in the National Register of Historic Places.

Property that is not eligible for listing in the California Register of Historical Resources is not considered to be significant under the criteria of the National Register of Historic Places and is not eligible for listing.

Based upon the lack of significant architecture, or significant historical associations), the subject property is not eligible for listing in the National Register of Historic Places, the California Register of Historical Resources, or consideration under the Morgan Hill Zoning Ordinance 18.60.050.

California Environmental Quality Act (CEQA)

CEQA defines a historical resource as a resource that meets one or more of the following criteria; (1) listed in, or determined eligible for listing in, the California Register of Historical Resources, (2) listed in a local register of historical resources as defined in PRC Section 5020.1 (k), (3) identified as significant in a historical resource survey meeting the requirements of PRC Section 5024.1(g), or (4) determined to be a historical resource by a project's lead agency (PRC Section 21084.1 and CEQA Guidelines Section 15064.5 (a). A historic resource consists of;

> "any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational social, political, military, or cultural annals of California." Generally, a resource shall be considered "historically significant" if the resource meets the criteria for listing in the California Register of Historical Resources"[7]

A literature search showed that the subject property is not listed in the Historic Properties Directory for Santa Clara County (2011) or the Morgan Hill Historic Resources Inventory. This

[7] CEQA Guidelines Section 15064.5(a)(3).

study and evaluation of the attributes of the property found the property does not meet the criteria of the California Register of Historical Resources or the City of Morgan Hill's Historic Preservation Zoning criteria. Thus, the property does not meet the criteria of any register as a "historical resource" under CEQA.

EXECUTIVE SUMMARY

Mission View Investors, LLC retained Apex Companies, LLC (formerly Bureau Veritas North America) to conduct a Phase I Environmental Site Assessment ("ESA" or "Assessment") of Fry Property located at 1105 Half Road in Morgan Hill, Santa Clara County, California (the "subject property"). The objective of the Assessment was to provide an independent, professional opinion regarding *recognized environmental conditions*, as defined by ASTM, associated with the subject property. This Assessment was requested in association with the potential purchase of the subject property. The planned use for the subject property is redevelopment with residential units.

This Assessment was performed under the conditions of, and in accordance with the Proposal Number 2019-06-21-27381, dated June 21, 2019, and ASTM International Practice E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. Any exceptions to, additions to, or deletions from the ASTM Practice are described in the report. Details of the work performed, sources of information, and findings are presented in the report. Limitations of the Assessment are described in Sections 1.2 and 1.3.

The subject property was assessed on foot. At the time of the walkthrough, the subject property was developed with one single-family residential building and a garage. Additionally, four storage trailers were observed in the northern portion of the subject property. All buildings were vacant during the site walk. The remainder of the property was either undeveloped (eastern portion) or developed with an overgrown cherry orchard (western portion). Access can be gained from Mission View Drive to the northeast and Half Road to the south.

The subject property has been developed as agricultural land by at least 1939. The existing residence and garage on the southern portion of the subject property was developed circa 1968.

The adjoining properties were developed as agricultural land by at least 1939. Residences were developed on the south and southwest adjoining properties circa 1968. By 1998, the residences on the southwest adjoining property were demolished and the north adjoining property was no longer in agricultural use. The existing residences on northern portion of the northeast adjoining property were developed by 2016. The remaining portions of the adjoining properties continue to be in agricultural uses.

Based on available information, it is Apex's opinion there are no *recognized environmental conditions*, as defined by ASTM, in connection with the subject property, except for the following:

- **Lead Impacted Soil –** Soil sampling activities conducted in 2018 found lead impacted soil to the north of the garage on the subject property. Lead was detected in the soil samples collected between 0.87 milligram per kilogram (mg/kg) and 350 mg/kg. Several of these samples exceeded the residential ESL of 80 mg/kg. Additionally, soil samples analyzed for Soluble Threshold Limit Concentration (STLC) lead analysis were detected above the hazardous waste criteria of 5.0 milligram per liter (mg/L). Since the impacted soil remains onsite, this is considered a *recognized environmental condition*.

The following environmental conditions that are not considered recognized environmental conditions were identified during this Assessment:

- **Agricultural Use -** The subject property has been in agricultural use from at least 1939. Soil samples were taken from the subject property during 2018 sampling activities and analyzed for organochlorine pesticides. Chlordane, a-chlordane, g-chlordane, p,p-dichlorodiphenyldichloroethane (p,p-DDD), p,p-dichlorodiphenyldichloroethylene (p,p-DDE), p,p-dichlorodiphenyltrichloroethane (p,p-DDT), and dieldrin were detected above their respective laboratory detection limits. However, the concentrations

detected were below their respective residential environmental screening level (ESL). No other organochlorine pesticides were detected above their laboratory detection limits. Based on the results, this is not considered a *recognized environmental condition*.

- **Water Well and Septic System –** A water well and septic system are currently located near the residence onsite. Further information regarding the well and septic system could not be found. This does not represent a *recognized environmental condition* to the subject property.

Apex recommends that the lead impacted soil be excavated from the subject property and properly disposed. Additionally, the water well and septic system should be properly abandoned before development of the subject property.

1.0 INTRODUCTION

Mission View Investors, LLC retained Apex Companies, LLC (formerly Bureau Veritas North America) to conduct a Phase I Environmental Site Assessment ("ESA" or "Assessment") of Fry Property located at 1105 Half Road in Morgan Hill, Santa Clara County, California (the "subject property"). The planned use for the subject property is redevelopment with residential units.

1.1 PURPOSE

The purpose the assessment is to follow ASTM International Practice E1527-13 (practice), which defines good commercial and customary practice in the United States of America for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and petroleum products. As such, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitation on CERCLA liability (the landowner liability protections or LLPs); that is, the practice that constitutes all appropriate inquiries into the previous ownership and uses of the property consistent with good commercial and customary practice as defined at 42 U.S.C. 9601(35)(B). The term *recognized environmental conditions* is defined as the presence or likely presence of any hazardous substances or petroleum products in, on, or at the property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. D*e minimis* conditions are not *recognized environmental conditions*.

1.2 METHODOLOGY

This Assessment was performed under the conditions of, and in accordance with the Proposal Number 2019-06-21-27381, dated June 21, 2019, and ASTM International Practice E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. The United States Environmental Protection Agency (USEPA) has determined that the ASTM E1527-13 standard is consistent with the requirements for conducting All Appropriate Inquiry (AAI) and may be used to comply with the AAI regulations (40 Code of Federal Regulations [CFR] Part 312). The methods and terms are as defined in the ASTM standard and AAI regulations.

The Assessment included the following components:

- Review information provided by the client. This includes that information required by the Standard with respect to "User Responsibilities" as well as other information provided (e.g., Environmental Liens, Activity and Use Limitations [AULs], Specialized Knowledge).
- Review selected information on general geology and topography of the subject property, local groundwater conditions, and proximity to ecologically sensitive receptors, such as streams, that might be impacted by *recognized environmental conditions*.
- Investigate historical use of the subject property through reasonably ascertainable ASTM Standard Historical Sources for evidence of prior land use that could have led to *recognized environmental conditions*. These Standard Historical Sources may include: aerial photography, United States Geological Survey (USGS) topographic maps, fire insurance maps, local street

directories, property tax files, building department records and zoning/land use records. Unless otherwise specified by the client/proposal this did not include a review of recorded land title records.

- Review of environmental records available from the client, property owner or site contact for evidence of *recognized environmental conditions* and AULs. This includes helpful documents such as regulatory agency reports, permits, registrations, previous assessments, etc.
- Review a commercial database summary of ASTM Standard Federal, State, and Tribal regulatory agency records pertinent to the subject property and offsite facilities located within ASTM-specified search distances from the subject property.
- Review of reasonably ascertainable Federal, State, Tribal and Local environmental agency case files for onsite facilities and adjoining properties identified in the database summary report and/or during the site reconnaissance that have the potential to adversely impact the subject property.
- Conduct an interview with at least one staff member of any one of the following: local fire department, local health department, local building department, or State/Local environmental agency. This individual was asked about their personal knowledge of the subject property, with the questioning directed to identifying *recognized environmental conditions*. For example, if the site includes a known leaking underground storage tank (LUST) incident, the State agency LUST Program Project Manager for the facility may be the person interviewed under this portion of the scope of services.
- Conduct interviews with the subject property owner (or their designated *Key Site Manager*) and occupants regarding current and previous uses of the subject property, particularly with respect to activities involving hazardous substances and petroleum products. Past owners, operators and occupants were also interviewed to the extent they were identified and their information was not likely to be duplicative. In cases of abandoned properties, where there is evidence of uncontrolled access, this included interviews with Owners/Occupants of one or more neighboring properties (subject to availability).
- Conduct an onsite reconnaissance of the subject property for visual evidence of *recognized environmental conditions*, including, but not limited to: existing or potential soil and water contamination, as evidenced by soil or pavement staining or discoloration, unnaturally stressed vegetation, or indications of waste dumping or burial; pits, ponds, or lagoons; containers of hazardous substances or petroleum products; electrical and hydraulic equipment that may contain polychlorinated biphenyls (PCBs), such as electrical transformers and hydraulic hoists; underground and aboveground storage tanks (USTs and ASTs, respectively); etc.
- A determination of the sources of water, power, and sewer service at the subject property.
- Perform a subject property line visual reconnaissance of adjacent properties for evidence of potential offsite environmental conditions that may affect the subject property.
- Evaluate information gathered during the Assessment to reach conclusions concerning *recognized environmental conditions* and prepare this report.

This Assessment did not include considerations of “Non-ASTM” issues (e.g., asbestos-containing building materials, radon, lead-based paint).

This Assessment did not include sampling or analysis of soil, groundwater or other materials.

An Apex representative, Ms. Jennifer Woods, Consultant from Apex's Los Angeles Regional Office, conducted the site walkthrough portion of the Assessment on July 8, 2019, unaccompanied. This Assessment was performed by (or under the responsible charge of) an *Environmental Professional* as defined in §312.10 of 40 CFR 312 (see Section 11.0).

Copies of selected relevant documents and supporting information are included in the applicable appendices. See the Table of Contents for a list of Appendices. Resumes for assessors and *Environmental Professionals* involved in this Assessment are included in the Appendices. Photographs taken at the time of the walkthrough are included behind the *Photographs* Tab.

1.3 EXCEPTIONS & LIMITING CONDITIONS OF ASSESSMENT

Information for the Assessment was obtained from the sources listed in the Appendices. This information, to the extent it was relied on to form our opinion, is assumed to be correct and complete. Apex is not responsible for the quality or content of information from these sources.

1.3.1 Unavailable Documentation

Requested documentation regarding the subject property was made available for review.

1.3.2 Lack of Access/Reconnaissance Limitations

Apex did not encounter significant access or reconnaissance limitations at the subject property.

1.3.3 Data Gaps

The ASTM Standard requires that the report identify the following: 1) *obvious* uses of the subject property since 1940 or first development, whichever is *earlier;* and 2) significant "data gaps" which affect the ability of the Environmental Professional to identify *recognized environmental conditions.* The report is also to include information on the sources consulted to address the data gaps.

Historical subject property ownership and/or use information was obtained for the time period 1939 to present. Based on this information, Apex has not established the history of *obvious* uses of the subject property since 1940 or first development, whichever is *earlier*. No significant data gaps (or other data gaps warranting discussion) were encountered during this Assessment, except for the following:

Data Gap:	Data Failure – pre 1939, a type of data gap as defined by ASTM
Does this data gap affect the EP's ability to identify RECs?	No
Rationale	Use of the subject property has been established since 1939. Prior use was likely the same (agricultural).
Information sources consulted	Apex obtained and reviewed the following reasonably ascertainable records/information: 1) ASTM Standard Historical Sources (except recorded land title records), 2) selected local environmental records sources, 3) interviewed local government agency personnel, 4) interviewed the current owner, and 5) ASTM Standard Environmental Records Sources (through a commercially available database). Contact information for the

previous owner was not provided and the scope of service did not include obtaining a chain-of-title.

1.4 RELIANCE

The information and opinions rendered in this report are exclusively for use by Mission View Investors LLC and The Crosswinds at Morgan Hill LLC. Apex will not distribute or publish this report without consent except as required by law or court order. The information and opinions expressed in this report are given in response to a limited assignment and should be considered and implemented only in light of that assignment. The services provided by Apex in completing this project were consistent with normal standards of the profession. No other warranty, expressed or implied, is made.

2.0 USER PROVIDED INFORMATION

ASTM E1527-13 defines "*User*" as the party seeking to use Practice E1527 to complete an environmental site assessment of the subject property. Apex understands that Mission View Investors LLC and The Crosswinds at Morgan Hill LLC are the *Users* as defined by ASTM E1527-13. ASTM E1527-13 specifies that certain tasks associated with identifying potential *recognized environmental conditions* at the subject property should be performed by the *User* and provided to the Environmental Professional (i.e., *User Responsibilities*). Accordingly, Apex provided the *User* a questionnaire, requesting specific information (see Appendices).

The User Questionnaire included requests for information on the following: environmental liens and AULs that are filed or recorded against the property; "specialized knowledge" of the *User*; relationship of the purchase price to the fair market value of the property if it were not contaminated; commonly known or reasonable ascertainable information; the degree of obviousness of the presence of likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation; the presence of *Proceedings Involving the Property* (e.g., litigation, regulatory agency rulings, violations); and the reason for performing the Phase I ESA, and other information/documents (e.g., site plan, ALTA survey).

Based on Apex's review of the *User* provided information, no readily apparent evidence of potential *recognized environmental conditions* at the subject property was noted.

Apex understands that the *User* intends to purchase the subject property.

3.0 SUBJECT PROPERTY DESCRIPTION

3.1 LOCATION

The subject property is located at 1105 Half Road, Morgan Hill, California (Figure 1, *Figures* Tab). The subject property is approximately 29 acres. The subject property can be accessed from Half Road to the south.

3.2 CURRENT USE OF SUBJECT PROPERTY

A description of the current uses and improvement(s) (if any) at the subject property is presented in the following table(s):

Parcel/Street Address (including known historic address[es])	1105 Half Road, Morgan Hill, California APN: 728-30-001, -002, -003, and -004
Owner:	Llagas LLC
Number and Size of Buildings:	One single-story residence and garage
Construction Date(s):	Circa 1968
Tenants:	None
Current Usage:	Vacant Residence and Orchards
Areas Inspected:	All areas of the subject property were inspected.

3.3 CURRENT USES OF ADJOINING/NEARBY PROPERTIES

The area surrounding the subject property consists of residential development. Adjoining and nearby properties were observed (from the subject property or from public access areas) for evidence of potential *recognized environmental conditions* and their potential to pose an environmental concern to the subject property (Figure 2, *Figures* Tab). The uses and features of adjoining properties are described below (by relative compass direction and across adjoining roadways):

Northeast		
Company/Facility Name	**Address**	**Type/Relevant Observations (if any)**
Agricultural & Single-Family Residences	1345 Half Road, 18201-18241 Tolusa Place	Agricultural & Residential/None noted

North		
Company/Facility Name	**Address**	**Type/Relevant Observations (if any)**
Undeveloped Land	Unaddressed Parcel	Undeveloped/None noted

South		
Company/Facility Name	**Address**	**Type/Relevant Observations (if any)**
Agricultural and Single-Family Residence	1400 Half Road	Agricultural & Residential/None noted

Southwest		
Company/Facility Name	**Address**	**Type/Relevant Observations (if any)**
Agricultural	1040-1045 Cochrane Road	Residential/None noted

Information regarding historical or other documented uses of nearby properties that may pose an environmental concern to the subject property is discussed in Sections 4.0 and 6.0, respectively.

3.4 PHYSICAL SETTING

The "physical setting" of the subject property was assessed through a review of the following: USGS Topographic Map, visual observations at the subject and nearby properties, and selected additional documentation (e.g., soil survey, geotechnical reports, previous Phase II assessment, interviews with local personnel, etc.). General information on the topography, surface water, soils, bedrock and groundwater in the vicinity of the subject property is as follows:

Soil Type	Arbuckle gravelly loam, which is well drained and has moderately low runoff potential (ERIS, 2019).
Bedrock (Type and Depth)	Quaternary alluvium and marine deposits (ERIS, 2019).
Nearby Surface Water/Drainage Features	Anderson Reservoir is located approximately 1.45 miles northeast of the subject property boundary (Google image).
Estimated Depth Shallow Groundwater:	Groundwater was measured to be between 19 and 46 feet below ground surface (bgs) in the vicinity of the subject property (www.geotracker.waterboards.ca.gov).
Estimated Shallow Groundwater Flow Direction	South-southeast (www.geotracker.waterboards.ca.gov).

The subsurface conditions under the subject property are interpreted from available data and may vary. Estimated groundwater flow direction is based on topography and nearby water features unless otherwise noted. Topography is not always a reliable basis for predicting groundwater flow direction. The local groundwater gradient under the subject property may be influenced naturally by zones of higher or lower permeability, or artificially by nearby pumping or recharge, and may deviate from the regional trend.

4.0 HISTORICAL REVIEW

The following Sections detail Apex's review of available historical and related information. This includes a review of ASTM Standard Historical Sources, Agency/Department records/personnel interviews and other documents. The historical summary also incorporates information obtained from interviews and other components of the Assessment process.

4.1 SUMMARY OF HISTORICAL REVIEW

The historical research presented in this Assessment has established the *obvious* uses of the subject property since 1939. In addition, information on historic uses of adjoining properties was also obtained. A chronological summary of the historic use of the subject and adjoining/nearby properties is presented below. Please refer to Section 1.3.3 for a summary of significant data gaps (if any).

The subject property has been developed as agricultural land by at least 1939. The existing residence and garage on the southern portion of the subject property was developed circa 1968.

The adjoining properties were developed as agricultural land by at least 1939. Residences were developed on the south and southwest adjoining properties circa 1968. By 1998, the residences on the southwest adjoining property were demolished and the north adjoining property was no longer in agricultural use. The existing residences on northern portion of the northeast adjoining property were developed by 2016. The remaining portions of the adjoining properties continue to be in agricultural uses.

4.2 AERIAL PHOTOGRAPHS

Aerial photographs, including the subject and adjoining properties, were obtained from ERIS for the years 1939, 1953, 1968, 1971, 1982, 1987, 1998, 2005, 2009, 2010, 2012, 2014, 2016, and 2018, which are included in the Appendices. Photographs reviewed are summarized as follows:

Date	Scale	Comments
1939 1953	1" = 500'	The subject and adjoining properties were developed as agricultural land.
1968 1971 1982 1987	1" = 500'	One residence was developed on the southern portion of the subject property. Several small residence-like buildings were developed on the southern portion of the southwest adjoining property. Two residence-like buildings were developed on the eastern portion of the south adjoining property. No further changes were noted.
1998 2005 2006 2009 2010 2012 2014	1" = 500'	The buildings on the southwest adjoining property were demolished. The north adjoining property was no longer in agricultural use. No further changes were noted.
2016 2018	1" = 500'	There were no significant changes from the 2014 photograph, except that residences were developed on the northern portion of the northeast adjoining property.

No readily apparent evidence of potential *recognized environmental conditions* at the subject or adjoining properties was noted on the aerial photographs reviewed, except for the following:

- The subject property has been developed as agricultural land since at least 1939.

4.3 USGS TOPOGRAPHIC MAPS

Topographic maps for the subject property and vicinity were obtained from ERIS for the years 1917, 1939, 1955, 1968, 1973, 1980, and 2015, which are included in the Appendices. Topographic maps reviewed are summarized as follows:

Date	Comments
1917	No structures or improvements were depicted on the subject and adjoining properties.
1939 1955 1968 1973 1980	The subject and adjoining properties were depicted as agricultural land.
2015	No structures or improvements were depicted on the subject and adjoining properties.

No readily apparent evidence of potential *recognized environmental conditions* at the subject or adjoining properties was noted on the topographic maps reviewed, except for the following:

- The subject property was depicted as agricultural land between 1939 and 1980.

4.4 FIRE INSURANCE MAPS

Sanborn fire insurance maps for the subject property and vicinity were requested and not available from ERIS for the subject and adjoining properties. A copy of the “No Coverage” letter is included in the Appendices.

4.5 CITY DIRECTORIES

City directories covering the subject property and adjoining properties were obtained from ERIS for the period between 1962 and 2018, which are included in the Appendices. A summary of the listings for the subject property and selected adjoining/nearby properties is shown below.

- The subject property was listed as various residential owners from 1971 to 1990.
- The northeast adjoining property was listed as various residential owners from 1971 to 2006 and as Tri-City Tile in 1990.
- The south adjoining property was listed as a residence in 2001.
- The remaining adjoining properties were not listed in the city directories reviewed.

No readily apparent evidence of potential *recognized environmental conditions* at the subject or adjoining properties was noted on the city directories reviewed.

4.6 RECORDED LAND TITLE RECORDS

As part of this assessment, Apex obtained reasonably ascertainable lien records that are filed under federal, state, tribal, or local law on behalf of Mission View Investors LLC. This work was subcontracted to ERIS and was limited to a review of these records for the presence of environmental liens and AULs.

According to the ERIS Environmental Lien Report, no records of environmental liens or AULs were identified.

According to the lien search, the subject property has been owned by LLagas LLC since 2000-2001.

No readily apparent evidence of potential *recognized environmental conditions* at the subject property was noted in lien search reviewed.

4.7 AGENCY CONTACTS

Apex contacted various government offices to request information on the subject property. Information was requested with respect to historic use and various environmental-related issues, such as: permits, use of or complaints/spills/violations involving hazardous substance and petroleum products, USTs, ASTs, etc. In addition, interviews were also conducted with available agency personnel. Interviews requested relevant *personal* knowledge regarding the past history of use of, and/or potential *recognized environmental conditions* associated with, the subject property. The government offices and local officials contacted are presented below, along with the relevant information (if any) they provided.

Agency: **BUILDING, PLANNING AND/OR ZONING DEPARTMENTS**

Permits/Comments: The Morgan Hill City Clerk was contacted on June 21, 2019 to obtain historical use information for the subject property. According to the Morgan Hill City Clerk on July 1, 2019, there are no records on file for the subject property.

Agency: **BAY AREA AIR QUALITY MANAGEMENT DISTRICT**

Permits/Comments: The Bay Area Air Quality Management District (BAAQMD) was contacted on June 21, 2019 to obtain information regarding environmental concerns or violations at the subject property. According to the BAAQMD on June 21, 2019, no records were on file for the subject property.

Agency: **SANTA CLARA COUNTY ENVIRONMENTAL HEALTH DEPARTMENT**

Permits/Comments: The Santa Clara County Environmental Health Department (SCCEHD) was contacted on June 21, 2019 to obtain information regarding environmental concerns or violations at the subject property. According to the SCCEHD on June 24, 2019, no records were on file for the subject property.

Agency: **REGIONAL WATER QUALITY CONTROL BOARD**

Permits/Comments: The Regional Water Quality Control Board (RWQCB) was contacted on June 21, 2019 to obtain information regarding environmental concerns or violations at the subject property. According to the RWQCB as of July 1, 2019, no records were on file for the subject property.

4.8 PREVIOUS ENVIRONMENTAL REPORTS OR OTHER DOCUMENTS

Apex made requests to the client and the current property owner/site contact regarding the presence of previous environmental reports or other relevant documents for the subject property (e.g., previous Phase I or Phase II ESA, geotechnical report, MSDS, etc.). The following reports were available for review:

***Phase I Environmental Site Assessment, 1040-1045 Cochrane Road and 1065-1105 Half Road, Morgan Hill, Santa Clara County, California,* dated June 6, 2018, prepared by AEI Consultants, prepared for Llagas, LLC.**

This Phase I ESA was prepared for a larger site comprised of approximately 87.6 acres that included the subject property. At the time of the walk through, the site was developed as a tree farm, cherry orchard (subject property), hay cultivation, and as construction staging for the Santa Clara Valley Water District. Small amounts of maintenance related materials and propane were observed in a shed on the northwest side of the property. No staining was observed in the vicinity of these materials. Additionally, three irrigation wells and two septic systems were located on the property. The septic systems were reportedly only for domestic use from the residences onsite. No further information regarding the wells or septic systems was provided.

No evidence of recognized environmental conditions were identified during the assessment. The following environmental conditions were noted:

- The property had been in agricultural use since approximately 1939 so there was a potential that pesticides, herbicides, and fertilizers used onsite have impacted the subject property. Soil sampling was recommended prior to redevelopment.
- It was recommended that asbestos and lead sampling be conducted for the buildings onsite prior to demolition.

***Limited Phase II Agricultural Investigation, 1040-1045 Cochrane Road, Morgan Hill, California*, dated September 20, 2018, prepared by AEI Consultants, prepared for Trumark Homes LLC.**

This Phase II was conducted in order to determine if shallow soils had been impacted by organochlorine pesticides, arsenic, and lead for the total 87.6 acre site. This involved the following soil sampling locations and analysis:

- Fifteen, four-point composite soil samples (SS-1 COMP through SS-15 COMP) were collected from the property in a grid pattern between zero and one foot bgs. These samples were analyzed for organchlorine pesticides using EPA Method 8081A. Additionally soil samples SS-1A through SS-15A were analyzed for arsenic and lead using EPA Method 6020.
- Eight discrete soil samples (SS-R-16A-D through SS-R-17A-D) were collected near the two residential buildings between zero and one foot bgs. These samples were analyzed for lead using EPA Method 6020.

The following results were found from the soil samples collected:

- Chlordane, a-chlordane, g-chlordane, p,p-dichlorodiphenyldichloroethane (p,p-DDD), p,p-dichlorodiphenyldichloroethylene (p,p-DDE), p,p-dichlorodiphenyltrichloroethane (p,p-DDT), and dieldrin were detected above their respective laboratory detection limits. However, the concentrations detected were below their respective residential environmental screening level (ESL). No other organochlorine pesticides were detected above their laboratory detection limits.

- Arsenic was detected in all samples analyzed between 0.91 milligram per kilogram (mg/kg) and 10 mg/kg. These concentrations exceed the direct contact residential ESL of 0.067 mg/kg; however, the concentrations are within the background levels of between 6.0-8.4 mg/kg.
- Lead was detected in all samples analyzed between 0.87 mg/kg and 200 mg/kg. Three of the samples (SS-R-16A, SS-R-16D, and SS-R-17B) exceeded the residential ESL of 80 mg/kg but were below the commercial ESL of 320 mg/kg.

It was recommended that further soil sampling be conducted around the residences to delineate any lead contamination found. If necessary, removal of impacted soil is also recommended.

***Additional Investigation of Lead in Soil, 1040-1045 Cochrane Road, Morgan Hill, California 95037*, dated October 30, 2018, prepared by AEI Consultants, prepared for Trumark Homes LLC.**

This investigation was conducted to further assess the lead contamination found around the residences. The investigation involved collecting 34 soil samples between 0 and 2.5 feet bgs in the areas previously found to contain lead. All of the soil samples were analyzed for lead using EPA Method 6020B and two soil samples were analyzed for Soluble Threshold Limit Concentration (STLC) lead analysis using EPA Method 6020B. Lead was detected between 5.1 mg/kg and 350 mg/kg. Out of the detections, 11 soil samples were detected above the residential ESL for lead. Additionally, the samples analyzed for STLC found soluble lead at 15 milligram per liter (mg/L) and 13 mg/L, which is above the hazardous waste criteria of 5.0 mg/L.

It was recommended that excavation of the lead-impacted soils be completed. On the subject property, this includes the area directly north of the residence onsite. Additionally, further soil profiling was recommended for any excavated lead impacted soil prior to offsite disposal since if may be classified as hazardous waste.

***CARB 435 Testing, Fry's Property, 1040-1045 Cohcrane Road and 1065-1105 Half Road, Morgan Hill, California*, dated November 12, 2018, prepared by Berlogar Stevens & Associates, prepared for Trumark Homes.**

This investigation involved excavating 20 test pits of serpentine fill material and collecting one sample per pit to determine the asbestos content of the serpentine rock. Based on a previous geotechnical investigation, the serpentine fill material was estimated to be approximately 65,000 to 70,000 cubic yards. Asbestos was detected between 0.25% and 1.75% chyrsotile in all of the samples collected. All of the test pits were backfilled with the excavated material. The serpentine fill material was not found on the subject property, it is only located in the northwest corner of the west adjoining property.

5.0 INTERVIEWS

Apex interviewed selected individuals associated with the subject property. The purpose of the interview(s) was to obtain additional information related to 1) the current and past operations at the subject and/or adjoining properties that may result in *recognized environmental conditions*, and 2) the presence of *Proceedings Involving the Property* (e.g., litigation, regulatory agency rulings, violations, etc.).

This included interviews with the current property Owner(s) and/or their "*Key Site Manager(s)*" and major Operators/Occupants. The "*Key Site Manager*" is that individual designated by the Property Owner that possesses good knowledge of the uses and physical characteristics of the property. Past owners, operators and occupants were also interviewed if 1) they were identified, 2) contact information was obtained, and 3) the information was not likely to be duplicative of that obtained from other sources. Information (if any) obtained from interviews with local Agency personnel is included in Section 4.7. In

addition, in the event the subject property currently appears “abandoned” with evidence of potentially unauthorized uses or uncontrolled access, one or more owners/occupants of adjoining properties were interviewed.

5.1 INTERVIEW WITH OWNER

See Section 2.0 for additional information provided by the site owner.

Mr. Rick Singer, the Manager with LLagas LLC, was interviewed via email on July 9, 2019. Mr. Singer has been associated with the subject property for approximately 20 years and was forthcoming with information of which he had knowledge. Mr. Singer was not aware of any hazardous materials or USTs currently located onsite. Mr. Singer was aware that a septic system was onsite; however, he was not aware of its exact location.

Mr. Singer was asked if he was aware of any of the following:

Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property.	Yes		No	**X**
Any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property.	Yes		No	**X**
Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.	Yes		No	**X**

Previous owners were not interviewed during this assessment, because sufficient information was obtained from other sources.

6.0 STANDARD ENVIRONMENTAL RECORD SOURCES: FEDERAL, STATE, AND TRIBAL

Available government database information prepared by ERIS was reviewed to evaluate both the subject property and listed sites within ASTM-recommended search distances (Appendix J). This included ASTM Standard Federal, State, and Tribal databases and may also include other types of records, subject to availability (e.g., local lists).

The regulatory database report also included an Unmappable Sites Section. Unmappable sites are sites that cannot be plotted with confidence, but can be located by zip code or city name. In general, a site cannot be geocoded due to inaccurate or missing information in the environmental database record provided by its applicable agency. Unmappable sites that were identified by Apex are included, as applicable, within the following paragraphs.

The subject property was not identified in the databases reviewed.

A total of 19 listed sites and one unmappable site were identified in the databases reviewed.

The following adjoining facilities and/or other nearby facilities of potential concern were noted.

Facility	Database	Orientation from Subject Property (miles)	Environmental Concern/Reason
St. Louise Hospital & Health Center/De Paul Medical Center 18500 St. Louise Drive	Delisted TNK, RCRA SQG, UST, CERS Tank, Santa Clara CUPA, RCRA NonGen	Approximately 304 feet north, upgradient	No, the site is listed only with no evidence of a release.
Mariani Orchards 1515 Half Road	RCRA NonGen	Approximately 902 feet northeast, crossgradient	No, the site is listed only with no evidence of a release.

The database information reviewed did indicate the presence of facilities within ASTM-recommended search distances of the subject property. It is Apex's opinion that most of the sites do not present an environmental concern to the subject property because they hold only an operating permit (which does not imply a release), require no further action, or based upon Apex's review, are too distant and/or topographically downgradient or crossgradient relative to the subject property to reasonably affect it.

7.0 TIER 1 VAPOR ENCROACHMENT SCREEN (VES)

Apex conducted a Tier 1 VES during the Phase I ESA. The VES was conducted in accordance with ASTM E2600-15, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*. A VES is often conducted in conjunction with a Phase I Assessment as much of the information utilized is common to both processes. The methods and terms are as defined in the ASTM standard.

The goal of a VES is to identify a *vapor encroachment condition* (VEC) at a subject property. A VEC is defined as the presence or likely presence of *chemicals of concern* (COC) vapors in the subsurface of a subject property caused by the release of vapors from contaminated soil or groundwater either on or near the subject property.

In accordance with the Standard, Apex requested that the *User* provide information on the subject property, with respect to the following: "specialized knowledge" of the *User*; and commonly known or reasonable ascertainable information.

Based on Apex's review of the *User* provided information, no readily apparent evidence of potential *vapor encroachment conditions* at the subject property was noted.

7.1 TIER 1 SCREENING INFORMATION

A Tier 1 VES includes obtaining and reviewing information on the subject property and adjoining properties. This includes information on the following: user provided information; physical setting information; existing/planned use of the subject property; types of structures/existing or planned on the subject property; surrounding area description; selected Federal, State, Local and Tribal environmental records sources; historical records related to the past use of the subject property and adjoining properties

within the *area of concern* (AOC), 1/3 to 1/10 mile; the likely chemicals of concern (COC); and the presence of significant natural or man-made conduits that can serve as preferential pathways, such as utility corridors, sewers, storm drains, etc. (Note: These "preferential pathways" may provide for a more direct route for vapors to encroach upon the subject property).

As stated previously, most of this information was obtained as part of the standard Phase I assessment process and has already been discussed in the applicable sections of this report. Additional information was also obtained with respect to the following: planned additional structures; and significant natural or man-made "preferential pathways" of potential vapor migration. This information is summarized below:

- The planned use of the subject property is development with new residential units.

7.2 TIER 1 SCREENING EVALUATION

An evaluation of that information includes two tests: 1) a search distance test to evaluate the proximity of the target property to known or suspected "*contaminated properties*", and 2) a chemicals of concern test to determine the likely presence of COCs at the subject or properties within the AOC. In evaluating the data, the distance and proximity to potentially contaminated offsite properties must be evaluated, including whether they are up-, cross-, or down-gradient relative to the subject property. A brief summary of relevant information considered for the Tier 1 screening follows:

Use of Property: Vacant Residence and Cherry Orchards

Soil Characteristics Arbuckle gravelly loam

Depth to groundwater: Between 19 and 46 feet bgs

Preferential Pathways: Utilities likely exist onsite

Location of Known or Suspect Contaminated Properties	**Type of COC**	**Orientation from Subject Property (Distance/Direction/Gradient)**	**Cleanup "Status" Or Comments**
St. Louise Hospital & Health Center/De Paul Medical Center 18500 St. Louise Drive	Petroleum Hyrocarbons	Approximately 304 feet north, upgradient	The site is listed only with no evidence of a release. VEC does not exist.

The *vapor encroachment screen* process has been completed in accordance with the Standard. Based on the previous uses of the subject property, a *vapor encroachment condition* does not exist.

8.0 SITE RECONNAISSANCE

8.1 GENERAL OBSERVATIONS

The subject property was assessed on foot. At the time of the walkthrough, the subject property was developed with one single-family residential building and a garage. Additionally, four storage trailers were observed in the northern portion of the subject property. All buildings were vacant during the site walk. The remainder of the property was either undeveloped (eastern portion) or developed with an overgrown

cherry orchard (western portion). Access can be gained from Mission View Drive to the northeast and Half Road to the south.

The following information was obtained regarding subject property utilities:

- Electricity: Pacific Gas & Electric Company
- Natural Gas: Pacific Gas & Electric Company
- Water: Santa Clara Valley Water District

8.2 CURRENT SITE CONDITIONS

Stained Soil/Surface	**Yes**		**No**	**XX**
Distressed Vegetation	**Yes**		**No**	**XX**
Odors	**Yes**		**No**	**XX**
Chemical/Hazardous Materials Storage	**Yes**		**No**	**XX**
Drums/Unidentified Substance Containers	**Yes**		**No**	**XX**
Wastewater/Stormwater	**Yes**	**XX**	**No**	

Comments (types, amount, location): Wastewater does not currently originate at the subject property. The storm water runoff from the subject property percolates naturally into the ground.

Sumps/Floor Drains	**Yes**		**No**	**XX**
Leachfields/Septic Tank	**Yes**	**XX**	**No**	

Comments (types, amount, location): According to the previous 2018 Phase I ESA conducted by AEI, one septic system is located near the residence. No evidence of the septic system was observed during the site walk.

Pits/Ponds/Lagoons/Pools of Liquids	**Yes**		**No**	**XX**

Source of Fuel for Heating: Natural Gas

Wells	**Yes**	**XX**	**No**	

Comments (types, amount, location): One water well with an associated 5,000-gallon water AST was observed to the northeast of the residence. No further information was provided regarding the well.

Waste Handling and Disposal:

Comments (types, amount, location): Waste is currently not generated onsite.

Potential PCB-Containing Equipment	**Yes**		**No**	**XX**
Aboveground Storage Tanks (ASTs)	**Yes**	**XX**	**No**	

Comments (types, amount, location): One 5,000-gallon plastic AST containing water was observed to the northeast of the residence. The AST is associated with the water well onsite. The AST appeared to be in good condition. No leaks or staining were observed.

Underground Storage Tanks (USTs)	**Yes**		**No**	**XX**

9.0 NON-ASTM ISSUES

The scope of services for this Assessment did not include an evaluation of “Non-ASTM” issues (e.g., asbestos-containing building materials, radon, lead-based paint, lead in drinking water, wetlands, etc.).

10.0 FINDINGS AND OPINIONS

This section presents a summary of available information on known or suspected *recognized environmental conditions, controlled recognized environmental conditions, historical recognized environmental condition, vapor encroachment conditions,* and *de minimis conditions* (if any) at the subject property. It also includes Apex’s opinion and rationale for concluding that a condition is, or is not, currently a *recognized environmental condition.* Based on a review of the information presented in this Assessment, Apex presents the following relevant findings and opinions:

- **Lead Impacted Soil –** Soil sampling activities conducted in 2018 found lead impacted soil to the north of the garage on the subject property. Lead was detected in the soil samples collected between 0.87 mg/kg and 350 mg/kg. Several of these samples exceeded the residential ESL of 80 mg/kg. Additionally, soil samples analyzed for STLC lead analysis were detected above the hazardous waste criteria of 5.0 mg/L. Since the impacted soil remains onsite, this is considered a *recognized environmental condition*.
- **Agricultural Use -** The subject property has been in agricultural use from at least 1939. Soil samples were taken from the subject property during 2018 sampling activities and analyzed for organochlorine pesticides. Chlordane, a-chlordane, g-chlordane, p,p-DDD, p,p- p,p-DDE, p,p- p,p-DDT, and dieldrin were detected above their respective laboratory detection limits. However, the concentrations detected were below their respective ESLs. No other organochlorine pesticides were detected above their laboratory detection limits. Based on the results, this is not considered a *recognized environmental condition*.
- **Water Well and Septic System –** A water well and septic system are currently located near the residence onsite. Further information regarding the well and septic system could not be found. This does not represent a *recognized environmental condition* to the subject property.
- **Tier 1 Vapor Encroachment Screen** – Apex has conducted a Tier 1 Vapor Encroachment Screen, in accordance with ASTM Standard E2600-15. Based on Apex's review of available information, a *vapor encroachment condition* at the subject property does not exist.

11.0 CONCLUSIONS AND RECOMMENDATIONS

Apex has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-0513 of the Fry Property located at 1105 Half Road, Morgan Hill, Santa Clara County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Sections 1.2 and 1.3 of this report.

Based on available information, it is Apex's opinion there are no *recognized environmental conditions*, as defined by ASTM, in connection with the subject property, except for the following:

- **Lead Impacted Soil**

The following environmental conditions that are not considered recognized environmental conditions were identified during this Assessment:

- **Agricultural Use**
- **Water Well**

Apex recommends that the lead impacted soil be excavated from the subject property and properly disposed. Additionally, the water well and septic system should be properly abandoned before development of the subject property.

12.0 SIGNATURES

This report was prepared, under the responsible charge of the Environmental Professional noted below, by:

APPENDIX A

RESUMES

Jennifer Woods

CONSULTANT III

Ms. Woods conducts Phase I Environmental Site Assessments (ESAs) for various financial, real estate, industrial, and commercial clients. Using American Society for Testing Materials (ASTM) standard practices as a guideline, Ms. Woods has conducted Phase I ESAs of industrials sites, commercial buildings, and undeveloped land throughout California, Arizona, Washington, Oregon, Nevada, Idaho, Montana, Colorado, Hawaii, and Texas. These have included performing historical research, interviewing owners, occupants, and local government officials, and generating reports. Ms. Woods also has participating in all phases of asbestos and lead projects. In addition, to assessing potential environmental conditions, Ms. Woods participates in Phase II investigative activities, including soil sampling, groundwater sampling, and soil vapor sampling.

Education

BS, Environmental Science, University of California, San Diego (2015)

Professional Registrations/Certification/Training

- Asbestos Hazard Emergency Response Act (AHERA) Building Inspector (6N10515)
- Asbestos Contractor/Supervisor (5N12392)
- Asbestos Certified Site Surveillance Technician (17-6101)

General Experience

2019 – Present **Consultant III • Apex Companies, LLC**

2015 – 2019 Consultant III • Bureau Veritas North America, Inc.

Project Experience

Phase I Environmental Site Assessment (ESAs)

Ms. Woods has conducted various Phase I ESAs throughout California, Arizona, Nevada, Oregon, Washington, Colorado, Hawaii, and Texas to satisfy due diligence investigations for real estate transactions, banks, real estate investment companies, developers, and property owners. Ms. Woods has conducted site inspections and investigated surrounding property usage; reviewed relevant regulatory files for investigations at the site or in the immediate area; and surveyed past site and surrounding property uses using aerial photographs, city directories, fire insurance maps, and government records.

Phase II Subsurface Investigations

Ms. Woods has conducted a variety of activities associated with Phase II Subsurface Investigations including field soil, groundwater, and soil vapor sample collection and lithology description, data quality control, and generating reports.

Asbestos and Lead Surveys

Ms. Woods has conducted a variety of asbestos and lead related services. Asbestos services include demolition to limited surveys of suspect asbestos-containing materials and air monitoring/oversight for asbestos abatement. Lead services include surveys for suspect lead paints by paint chip collection and XRF analyzer for direct readings of lead content.

National Environmental Policy Act (NEPA)

Ms. Woods has conducted environmental assessments in Southern California in compliance with the National Environmental Protection Act (NEPA) for national telecommunication clients. Ms. Woods' research includes consultation with several bureaus within the United States Department of Interior such as National Park Services (NPS), United States Fish & Wildlife Services and Bureau of Land Management (BLM). In addition, Ms. Woods contacts state and local agencies, federally and non-federally recognized Native American Tribes concerning religious areas, and the California Historic Preservation Office. Ms. Woods has investigated potential wildlife and wilderness preserves, wetlands, endangered or threatened species and habitats and Native American religious areas. Ms. Woods has knowledge of the Federal Communications Commission's (FCC) Nationwide Programmatic Agreement (NPA).

Shannon Gillespie

PROJECT MANAGER

Ms. Gillespie has over 20 years of technical experience in conducting environmental assessments. Ms. Gillespie supervises staff responsible for conducting Phase I Environmental Assessments and subsequent subsurface investigations and has final review of project deliverables. She interacts with clients and is responsible for assuring report timeliness and maintaining project budgets. She prepares Phase I and subsurface investigation proposals and conducts business development.

Ms. Gillespie has coordinated, managed, and conducted Phase I Environmental Assessments of commercial and industrial properties as part of real estate transactions for due diligence investigations. The Phase I assessments include site visits to inspect current site and vicinity usage, review of relevant regulatory files for investigations at the site or in the area, personnel interviews, reviews of hazardous material and waste handling practices, identifying potential sources of contamination and asbestos-containing materials, and surveys of past site and vicinity usage.

Ms. Gillespie also reviews environmental assessment reports for financial institutions to assess business risk and assists clients in the preparation of Hazardous Materials Business Plans. Additionally, she conducts Phase II and Phase III assessments to locate and determine the extent of soil and groundwater contamination. Her responsibilities include soil boring installation, developing site-specific work plans and health and safety plans, interpreting analytical results, estimating volumes of impacted soil and groundwater, estimating remediation costs and report preparation.

Project Experience

CERCLA Preliminary Assessment – State of California Real Estate Division

Ms. Gillespie prepared a CERCLA preliminary assessment for a 1,300-acre Department of Defense and California Army National Guard installation (Los Alamitos Armed Forces Reserve Center). The assessment included: a review of available files, personnel interviews, onsite and offsite reconnaissance, historical aerial photograph review and survey of potential sources of past and current contamination and contaminant sources. The preliminary assessment indicated that past and

present operations at the installation had involved in use, storage, treatment, spillage, leakage, and disposal of materials and/or wastes that are now considered hazardous. These materials and wastes were used in a variety of aircraft and vehicle maintenance, fuel storage, landfilling, aircraft-washing, and other facility activities and operations. Based on this information, potential areas of concern at the installation requiring site investigation activities were identified. The Preliminary Assessment was conducted using guidelines developed by the U.S. Environmental Protection Agency (EPA), Waste Management Division, Region IX and California Department of Toxic Substances (DTSC).

The SI included twelve potential areas of concern identified in the Preliminary Assessment. The areas included two landfills, a flight line area, revetments, fuel tank farms, former rifle ranges, clarifiers, munitions bunkers, agricultural areas and a wastewater treatment plant. Investigation included the collection of air, surface water, groundwater, soil and soil vapor samples to assess the presence of various contaminants that were identified in the previous assessments. Ms. Gillespie was an integral member of the team in the evaluation of data collected during the SI and generation of the remedial investigation work plan, health and safety plan, quality assurance project plan, and field sampling plan.

Phase I Environmental Site Assessment (ESAs) – Lending Institute

Ms. Gillespie supervised the completion of a 45-site portfolio for a major lending institute to satisfy due diligence. The sites were located in California, Texas, and Arizona and required the coordination of staff from three other offices. All field work and written reports had to be completed within a four week period of time and within a tight budget. Ms. Gillespie solely maintained client contact and reviewed all deliverables prior to submittal to client. Some of the projects required subsequent Phase II investigations based on findings during the Phase I.

Phase I Environmental Site Assessment (ESAs) – Auto Manufacturing Company

Ms. Gillespie conducting a Phase I ESA of a previously industrial buildings and adjacent agricultural field prior to the client purchasing properties. Based on the findings of the site inspection, a subsurface investigation was conducted simultaneous to the completion of the Phase I. The subsurface investigation had to be completed within five days and included 34 boreholes using direct push methods and over 160 samples. One report was submitted to the client that included both the Phase I and subsurface investigation.

Phase I Environmental Site Assessment (ESAs) – Cellular Communications Company

Ms. Gillespie managed the completion of over 700 assessments for a cellular communications company to satisfy due diligence. Completion of the project, which included Phase I ESAs and NEPA work, required the coordination of staff from five other offices. All fieldwork and written reports had to be completed within a quick turnaround and within a tight budget. Ms. Gillespie solely maintained client contact and reviewed all deliverables prior to submittal to client.

BVNA Proposal No. 2019-06-21-27381

RE: Phase I Environmental Site Assessment Proposal
Fry Property
1105 Half Road
Morgan Hill, California

Dear Mr. Vrotsas:

Bureau Veritas North America, Inc. (BVNA) is pleased to submit this proposal to conduct a Phase I Environmental Site Assessment (ESA) for the above-referenced property consisting of approximately 29 acres (the "site" or "subject property"). BVNA understands that the site is currently residentially and agriculturally developed. Furthermore, BVNA understands this ESA is being performed in association with a real estate transaction.

BVNA will use the ASTM International Standard Practice E 1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process,* as a guideline. The United States Environmental Protection Agency has determined that the ASTM E1527-13 standard is consistent with the requirements for conducting "all appropriate inquiry (AAI) into the previous ownership and uses of a property consistent with good commercial or customary practice" as defined in 42 U.S.C. §9601(35)(B). This practice also permits the user to satisfy **one** of the requirements to qualify for "landowner liability protections (LLPs)" under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

In addition to describing tasks to be performed by BVNA, Practice E 1527-13 describes tasks that are the responsibility of the *User*, defined as the party seeking to use E 1527-13 to complete an ESA. The tasks to be performed by BVNA and the tasks to be performed by the User are described in the following sections. Methods and terms are as defined in the ASTM Standard and AAI regulations.

BVNA'S SCOPE OF SERVICES

The Phase I ESA will be conducted to provide an independent, professional opinion regarding *recognized environmental conditions*, as defined by ASTM, associated with the site. The term *recognized environmental conditions* is defined as the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis*

Bureau Veritas North America, Inc.
Health, Safety and Environmental
1940 East Deere Street, Suite 210
Santa Ana, CA 92705
m : 714.431.4100
f : 714.825.0685
www.us.bureauveritas.com

conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not *recognized environmental conditions*.

Accordingly, BVNA proposes to perform the following:

- Review of information provided by the client. This includes that information required by the Standard with respect to "User Responsibilities" as well as other information provided. Please refer to the attached Questionnaire for a discussion of Recorded Land Title Records, including Environmental Liens or Activity and Use Limitations (AULs), and other User provided information (e.g., Specialized Knowledge). Examples of Helpful Documents are provided as an Attachment (see Attachment 1).
- Review selected information on general geology and topography of the site, local groundwater conditions, and proximity to ecologically sensitive receptors, such as streams, that might be impacted by *recognized environmental conditions*. Identify sources of water, power, and sewer service at the subject property.
- Investigate historical use of the site through reasonably ascertainable ASTM Standard Historical Sources for evidence of prior land use that could have led to *recognized environmental conditions*. These Standard Historical Sources may include: aerial photography, United States Geological Survey (USGS) topographic maps, fire insurance maps, local street directories, property tax files, building department records and zoning/land use records.
- Review of a commercial database summary of ASTM Standard Federal, State, and Tribal regulatory agency records pertinent to the site and offsite facilities located within ASTM-specified search distances from the site.
- Perform a Tier 1 Screening as per ASTM E 2600-15 (no sampling) to identify whether or not a potential exists for subsurface vapor encroachment onto the subject property.
- Review reasonably ascertainable Federal, State, Tribal and Local environmental agency case files for onsite and adjoining facilities identified in the database summary report (and/or during site reconnaissance) that have the potential to adversely impact the site. However, it should be noted that access and retrieval of any federal, state, or local documents related to the scope of work is limited to the availability of records upon request from governmental agencies or commercial sources within the time frame allocated for this effort. BVNA will make reasonable efforts to obtain such information. Furthermore, depending on the availability and number of records to be reviewed, additional charges may apply.
- A reasonable attempt will be made to interview at least one staff member of any <u>one</u> of the following: local fire department, local health department, local building department, or State/Local environmental agency. This individual will be asked about their personal knowledge of the subject property, with the questioning directed to identifying *recognized environmental conditions*. For example, if the site includes a known leaking underground storage tank (LUST) incident, the State Agency LUST Program Project Manager for the facility may be the person interviewed under this portion of the scope of services.
- Review environmental records available from the property owner or site contact including regulatory agency reports, permits, registrations, and consultant reports for evidence of

recognized environmental conditions and AULs. Examples of Helpful Documents are provided as an Attachment (see Attachment 1).

- Interview the site owner (or their designated *Key Site Manager*) and *Occupants* regarding current and previous uses of the property, particularly activities involving hazardous substances and petroleum products. Past owners, operators and occupants will also be interviewed to the extent they are identified and their information will not likely be duplicative. In cases of *abandoned properties*, where there is evidence of uncontrolled access, interviews with Owners/Occupants of one or more neighboring properties may be performed.
- Conduct an onsite reconnaissance of the site for visual evidence of r*ecognized environmental conditions*, including, but not limited to:
  - -- Existing or potential soil and water contamination, as evidenced by soil or pavement staining or discoloration, stressed vegetation, or indications of waste dumping or burial
  - -- Pits, ponds, or lagoons
  - -- Containers of hazardous substances or petroleum products
  - -- Electrical and hydraulic equipment that may contain polychlorinated biphenyls (PCBs), such as electrical transformers and hydraulic hoists
  - -- Underground and aboveground storage tanks (USTs and ASTs, respectively)

  During the site walkthrough, if BVNA‘s access to buildings is limited or safety concerns prohibit entry, or if direct observation of the site is restricted, such as by dense vegetation, BVNA will make an effort to contact you for further direction.
- Perform a site property line visual assessment of adjacent properties for evidence of potential offsite environmental conditions that may affect the site.

The scope of services does not include considerations of “Non-ASTM” issues (e.g., asbestos-containing building materials, radon, lead-based paint).

The scope of services for the Phase I ESA does not include any sampling and/or analysis of air, soil, groundwater or other materials.

Following completion of the above noted Phase I ESA activities, BVNA will evaluate the data and prepare the final report. This report will conclude with BVNA‘s opinion regarding the presence of *recognized environmental conditions* at the site. The report will include recommendations for additional assessment/investigation, as warranted, based on the findings of the report. Activities performed by BVNA under this scope of services will be conducted under the responsible charge of an *Environmental Professional,* as defined in ASTM Practice E 1527-13.

Depending on the findings of the Phase I, it may be warranted to perform Phase II-type testing or analyses to further evaluate *recognized environmental conditions*. The scope of services and attendant fees for this work will be presented in a separate proposal, as needed.

BVNA will provide these services described above using its commercially reasonable best efforts consistent with the level and skill ordinarily exercised by members of the profession currently practicing under similar conditions.

USER'S RESPONSIBILITIES

The ASTM Standard outlines increased obligations on the part of the property purchaser (i.e., the "User"). Section 6, *User's Responsibilities,* of ASTM Practice E 1527-13 describes specific tasks to be performed by the User of the Phase I ESA, which include the development of information to be provided to BVNA. We have summarized these requirements in the Questionnaire contained in Attachment 2.

In order to facilitate project completion, the Questionnaire should be completed and returned to BVNA at the same time this proposal is authorized. This Questionnaire will be included in the Phase I ESA report, and will assist in satisfying the "User Responsibilities" portion of the Standard. Incomplete or missing information could be considered a *significant data gap* and could result in a determination that AAI is not complete.

As an option and on your behalf, BVNA can obtain and review the required "Recorded Land Title Records for Environmental Liens or AULs" for an additional fee as specified in the Fees Section.

To effectively use available resources, BVNA also requests that the client provide the following:

1. Accurate information on the size and location of the site (ALTA Survey if available), number of parcels and corresponding ID numbers, and the name and contact information for the current owner of the site.
2. If you are aware of other addresses historically associated with the site, please provide them to BVNA within five days of commencement of this project. If other addresses are found during completion of the Phase I ESA that were not provided to BVNA, then a revision in the fee for this project may be necessary.
3. Timely access to the site, BVNA will coordinate the site visit with you and/or designated site contacts.
4. BVNA will review related documents (e.g., Helpful Documents in Attachment 1), provided you or your representatives make them available to us within five days of project commencement.
5. Any specialized knowledge or experience of the client that is material to identifying *recognized environmental conditions,* any information regarding the presence of environmental liens or activity or land use limitations, as well as any information regarding a significantly lower purchase price than comparable properties that may suggest an environmental concern.

SCHEDULE

BVNA will schedule the fieldwork for this project within one week following receipt of your written authorization to proceed and the name of the site owner/site contact. BVNA will provide an electronic copy of the draft report within three weeks following receipt of your written authorization. This schedule is subject to the presence of *significant data gaps* and/or delays in receipt of requested information from outside sources, and may be delayed if either of these occurs.

FEES

Based on the information you provided for this proposal, BVNA will complete the work for the Phase I ESA for a lump sum price of $3,500, which includes the Tier I Vapor Encroachment Screening. Payment can be made by credit card by completing the information requested on the

"Proposal Authorization Form" or by check made payable to BVNA and referencing our proposal number.

Optional AUL/Lien Search – BVNA can obtain and review the required Recorded Land Title Records for the presence of Environmental Liens or AULs for an additional fee of $250.00 for the first parcel number. This work will be subcontracted and does not include a title search, rather just a review to determine if there are environmental liens (and/or AULs). Note that additional fees for the above will be required in the event of multiple parcels and the specific cost will be dependent on the title history of the parcels. If this service is desired, please initial the appropriate location on the Proposal Acceptance Agreement. Please note that this is not a formal chain-of title report.BVNA can provide reliance to additional entities, as needed, at an additional cost.

TERMS & CONDITIONS

Attached to this proposal is a copy of our standard Terms and Conditions dated July 2017 (see Attachment 3).

Any unexpected conditions or concerns that become apparent during the project, such as deviation from the assumptions outlined herein, may require a revision in the project scope, schedule, and fees. This proposal assumes availability of files/documents within the noted time constraints of the project and that the amount of files to be reviewed does not exceed 500 pages. *Depending on the availability and number of provided records to be reviewed, additional charges may apply*. This proposal also assumes that the personnel to be interviewed are available and provide responses to requests for information within the noted time constraints of the project. If s*ignificant data gaps,* as defined by ASTM, are encountered during the performance of this Phase I, a revision in the fees may be required in order to further evaluate the data gap(s). BVNA will promptly notify you of necessary changes in project scope and fees, and obtain written confirmation of such changes. If BVNA's work is encumbered or stopped by your actions, such as failure to arrange site access, you will be charged additional fees according to our fee schedule. Should additional environmental work be performed, you will be billed on a time and materials basis according to our fee schedule.

This proposal will remain valid for 60 days. We will invoice upon completion of the field work with net payment expected in 30 days.

AUTHORIZATION

For your convenience, this proposal is presented in a form that can be accepted as an agreement. To accept this proposal, please sign both below and at the final page of the attached Terms and Conditions and return a copy to me via fax or email. Your signature represents your acceptance of this proposal and its terms.

BVNA appreciates the opportunity to submit this proposal and looks forward to working with you on this project. If you have questions or comments regarding the information in this proposal or if we can be of further assistance, please do not hesitate to contact Shannon Gillespie at 714-343-7559 or Shannon.gillespie@us.bureauveritas.com.

Sincerely,

PROPOSAL AUTHORIZATION/ACCEPTANCE AGREEMENT

In response to your request, Bureau Veritas North America, Inc. (BVNA) is pleased to present this proposal to conduct a Phase I Environmental Site Assessment (ESA) of the Fry Property located at 1105 Half Road in Morgan Hill, California as identified in our Proposal No. 2019-06-21-27381, dated June 21, 2019.

Description of Services: **Phase I ESA**

Project Location: Fry Property, 1105 Half Road, Morgan Hill, California

BVNA Proposal #: 2019-06-21-27381 **Fixed Fee:** **$3,500**

PROPOSAL ACCEPTED BY: Josh Vrotsos

TITLE: Land Acquisitions

DATE ACCEPTED: June 21, 2019

Optional AUL/Lien Search – BVNA can obtain and review the required Recorded Land Title Records for the presence of Environmental Liens or AULs for an additional fee of **$250.00** for the ***first*** parcel number. This work will be subcontracted and does not include a title search, rather just a review to determine if there are environmental liens (and/or AULs). Note that additional fees for the above will be required in the event of multiple parcels and the specific cost will be dependent on the title history of the parcels. If this service is desired, please initial the appropriate location on the Proposal Acceptance Agreement. Please note that this is not a formal chain-of title report.

OPTION ACCEPTED BY: Josh Vrotsos

TITLE: Land Acquisitions

DATE ACCEPTED: 6/21/19

By signing this document I am authorizing Bureau Veritas North America, Inc. (BVNA) to begin performing this project per the scope of services referenced above. My signature represents a commitment to reimburse BVNA for all charges incurred per the fee schedule on this project up to the time I request work to stop. The work stoppage date shall be issued in writing.

Please note that BVNA reserves the right to withhold all reports until such time as we receive a signed Proposal Acceptance Agreement or other written authorization referencing this AGREEMENT in its entirety.

This AGREEMENT together with BVNA's proposal, Unit Fee Schedule, and following Terms and Conditions constitute the entire agreement between the client and BVNA and supersedes all prior written or oral understandings:

HELPFUL DOCUMENTS

HELPFUL DOCUMENTS

It is your obligation to provide current or historical documents regarding environmental conditions at the site. Listed below are some examples of the types of documents that will help us complete the ESA:

- Recorded Environmental Liens (required)
- Recorded Activity and Use Limitations (required)
- Prior Phase I ESA reports
- Transaction Screen reports
- Phase II ESA reports, including subsurface investigations
- Phase III Cleanup or Remediation documentation
- Risk Assessment reports
- Geotechnical Investigation reports
- Environmental Compliance Audit reports
- Maps showing property boundary, assessors' parcel number, and major subject property features (including ALTA Survey or Plat of Survey)
- Legal description
- Aerial photographs and fire insurance maps
- Underground/Aboveground Storage Tank (UST/AST) registrations, installation dates, construction type, capacity, location, etc.
- Documentation for other underground equipment such as associated UST piping, sumps, cisterns, clarifiers, oil/water separators, catch basins, wells (including dry wells), and underground injection systems
- Agency inspection records and violation history
- Notices or other correspondence from local, state, and federal regulatory agencies relating to past or current violations of environmental laws
- Spill/Release reports
- SARA 313 (Form R) reports
- Hazardous waste generator notices
- Hazardous waste manifests
- Environmental permits and registrations, including:
  - Solid waste and/or hazardous waste disposal
  - Wastewater discharge permits with local sewer districts and/or NPDES
  - Hazardous waste treatment, including Permit-By-Rule, Conditional Authorization, or Conditional Exemption
  - Air emission permits, including boilers, paint booths, etc.
  - Underground injection systems
- Safety plans, preparedness and prevention plans, spill prevention, countermeasure and control plans, etc., including:
  - Risk Management Plan
  - Storm Water Pollution Prevention Plan
  - Hazardous Materials Management/Business Plan
  - Material Safety Data Sheets
  - Hazardous Communications Training Program
- Community right-to-know plans
- Other environmental documents (e.g., asbestos containing materials, polychlorinated biphenyls, lead-based paint, lead in drinking water, radon, indoor air quality, mold).

USER QUESTIONNAIRE

ASTM PRACTICE E 1527-13 USER/CLIENT QUESTIONNAIRE
To be returned to BVNA with the authorized proposal

This Questionnaire is required to be completed by **the User/Client.**

GENERAL INFORMATION

User/Client Name(s):	Mission View Investors LLC
Property Name and Address (Include known current and former address[es] and parcel no.):	Fry Property- Residential Portion
Property Acreage:	Approximately 29 Acres
Current Property Type (Designate property type and list current tenants [business name and type of operation]):	Residential: XX, Commercial: __ Industrial: __ Other: __
Type of Property Transaction with respect to User (Designate one):	Purchase: XX Lease: __ Other (provide further information): __
Reason Phase I is Required (Check all that apply):	*Landowner Liability Protections* (e.g. Innocent Landowner Defense): XX Evaluation of Business Risk: __ Other (list): XX Purchase & Financing of the property. (Note: If no reason is given it is assumed that this assessment is being performed to satisfy one of the requirements for *Landowner Liability Protections* to *CERCLA* liability.
Site Owner/ Contact(s) (Name and phone number):	Rick Singer 408-390-0323 Manager- LLagas, LLC -- Seller's rep ricksinger36@gmail.com

Please provide the above information as well as a site plan (ALTA Survey, if available) which clearly designates the boundaries of the subject property for purposes of this Phase I ESA. A list of other Helpful Documents is included with the proposal.

Providing the following information (if available) to the *environmental professional* (BVNA) is one of the requirements to qualify for one of the *Landowner Liability Protections (LLPs)* offered under CERCLA. Missing or incomplete information could result in a determination that "*all appropriate inquiry*" is not complete. If further information is desired regarding these issues, BVNA recommends you consult with an Environmental Attorney.

REQUIRED INFORMATION

The citation at the end of each item (e.g., 40 CFR 312.XX) is the section of EPA's November 1, 2005 AAI Final Rule which discusses that item. The ASTM Standard requires that reasonably ascertainable recorded land title records that are filed under federal, tribal, state and local law should be reviewed to determine the presence of Environmental Liens and Activity and Use Limitations (AULs) that are currently recorded against the property. This should also include a review of Environmental Liens and AULs that are imposed by judicial authorities and recorded/filed in judicial records. The Standard recommends that the User retain a title company or title professional to undertake a review of recorded land title records. Furthermore, the User is to provide any actual knowledge on Environmental Liens and AULs, as well as other selected information regarding *recognized environmental conditions,* to the *environmental professional.*

1. Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25). Given the above requirement, are you aware of any environmental cleanup liens against the *property* that are filed or recorded under federal, tribal, state or local law? (Check One)
No: XX Yes (If "Yes" provide further information): __
(Note: If you desire that BVNA retain a title company/title professional on your behalf to review reasonably ascertainable recorded land title records for the presence of environmental cleanup liens and AULs currently recorded against the property please designate such on the Proposal Acceptance Agreement)

2. Activity and land use limitations (AULs) that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26). Given the above requirement, are you aware of any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law? (Check One)
No: XX Yes (If "Yes" provide further information): __

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).
As the *user* of this *ESA* do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an adjoining *property* so that you would have specialized knowledge of the chemicals and processes used by this type of business? (Check One)

No: XX

Yes (If "Yes" provide further information): __

4. Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).
Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?

Yes: XX

No (If "No" provide further information): __

Not Applicable (e.g., transaction is a lease): __

5. Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30).
Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases?

No: xx. We've no knowledge other than what's provided in the reports given to us.

Yes (If "Yes" provide further information): __

For example, as *user*,
(a.) Do you know the past uses of the *property*?

No: xx. We've no knowledge other than what's provided in the reports given to us..

Yes (If "Yes" provide further information): __

(b.) Do you know of specific chemicals that are present or once were present at the *property*?

No: xx. We've no knowledge other than what's provided in the reports given to us.

Yes (If "Yes" provide further information): __

(c.) Do you know of spills or other chemical releases that have taken place at the *property*?

No: xx.

Yes (If "Yes" provide further information): __

(d.) Do you know of any environmental cleanups that have taken place at the *property*?

No: xx. We've no knowledge other than what's provided in the reports given to us.

Yes (If "Yes" provide further information): __

6. The degree of obviousness of the presence or likely presence of contamination at the *property* and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).
As the *user* of this *ESA*, based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property*?

No: xx. We've no knowledge other than what's provided in the reports given to us.

Yes (If "Yes" provide further information): __

7. Proceedings involving the *property* (ASTM E 1527-13 § 10.9).
Are you aware of any of the following:

(a.) Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?

No: XX

Yes (If "Yes" provide further information): __

(b.) Any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property?

No: XX

Yes (If "Yes" provide further information): __

(c.) Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?

No: XX

Yes (If "Yes" provide further information): __

SIGNATURE

It is understood that the information presented in this form is an integral part of the Phase I ESA process and that BVNA will evaluate and rely on this information in the development of the final Phase I ESA report.

TERMS AND CONDITIONS

BUREAU VERITAS NORTH AMERICA, INC.'S CONSULTING AGREEMENT

This Agreement is made and entered into by and between Dividend Homes Inc. ("Client") and Bureau Veritas North America, Inc., hereinafter ("BVNA"). These Terms and Conditions govern the work to be performed by Bureau Veritas North America, Inc. ("BVNA"), as specified in the proposal prepared by BVNA of which these Terms and Conditions are a part thereof. The term of this Agreement shall be for one year from the effective date of this Agreement, and shall renew for successive one year periods unless terminated by written notice to the other party at least thirty (30) days prior to the annual renewal date. Fees may be adjusted annually.

RECITALS

WHEREAS, BVNA is trained, experienced and competent to perform the services which will be required by this Agreement;

WHEREAS, BVNA is willing to render the professional services described herein on the following terms and conditions;

WHEREAS, All services will be conducted in accordance with the proposal and these attached terms and conditions.

NOW, THEREFORE, the parties agree as follows:

AGREEMENT

1. **Scope of Services:** BVNA shall provide its services at the time, place, and in the manner specified in the proposal. BVNA's employees shall not be retained as expert witnesses except by separate written agreement. Client agrees to pay BVNA's legal expenses, administrative costs and fees pursuant to BVNA's then current fee schedule for BVNA to respond to any subpoena**.**

2. **Time of Performance:** The services of BVNA are to commence upon execution of this Agreement and shall continue until all authorized work is completed. BVNA shall use commercially reasonable best efforts in performing services under these Terms and Conditions, and the Companion Documents ("Agreement"). Companion Documents shall mean any documents accompanying BVNA's Proposal, including but not limited to the Scope of Work, Fee Schedules or any other Exhibits specific to the project. BVNA shall not be responsible for failure to perform its services if i) there is a failure or delay by Client or its contractors in providing BVNA with the necessary access to properties, documentation, information, or materials; ii) Client or its contractors fail to approve or disapprove BVNA's work; or iii) if Client causes delays in any way whatsoever. In any of these events, BVNA's time for completion of its service shall be extended accordingly. BVNA shall not be responsible for failure to perform if such failure is due to any act of God, labor trouble, fire, inclement weather, act of governmental authority, failure of transportation, accident, power failure or interruption, or any other cause reasonably beyond BVNA's control. In any of these events, BVNA's time for completion of its services shall be extended accordingly.

3. **Safety Responsibilities:** If BVNA provides a safety and health officer at the Site where the work is to be done, BVNA will advise Client regarding deficiencies with respect to specifications and applicable regulations. BVNA is not responsible for the failure of Client or its agents to follow the recommendations of BVNA's personnel. Where BVNA provides a safety and health officer it shall be authorized to take measures on behalf of Client that, in BVNA's opinion, will maintain generally accepted health and safety standards for personnel at the Site.

4. **Site Conditions:** It is understood and agreed that (i) BVNA is not, and has no responsibility as an owner, handler, generator, operator, treater, storer, arranger, transporter or disposer of hazardous or toxic substances found or identified at the Site; and (ii) Client shall undertake to arrange for the handling, removal, treatment, storage, transportation, and disposal of hazardous substances or constituents found or identified at the Site. Client understands and acknowledges that (i) Client may be requesting BVNA to undertake services or work for the benefit of Client involving the presence or potential presence of hazardous substances; and (ii) BVNA may be exposed to claims arising out of, or involving actual, alleged, or threatened discharge, disposal or release or escape of hazardous or potentially hazardous pollutants including, but not limited to, solid, liquid, gaseous or thermal irritants or contaminants including smoke, water, vapor, soot, fumes, acids, alkalies, chemicals, wastes, and waste materials, and Client understands and agrees that BVNA shall only be responsible for losses which directly result from BVNA's negligence. Client will grant to, or obtain for, BVNA unimpeded access to the Project site for all equipment and personnel necessary for the performance of the Services, and (if requested by BVNA) necessary for BVNA's personnel to photograph the Project site. As required to effectuate such access, Client will notify all owners, lessees, contractors, subcontractors, and other possessors of the Project site that BVNA must be allowed free access to the site. While BVNA agrees to take reasonable precautions to minimize damage to the site, Client understands that, in the normal course of performing the Services, some damage may occur, and further understands that BVNA is not responsible for the correction of any such damage unless so specified in the Proposal. Client is responsible for the accuracy of locations for all subterranean structures and utilities. BVNA will take reasonable precautions to avoid known subterranean structures and utilities, and Client waives any claim against BVNA, and agrees to defend, indemnify, and hold BVNA harmless from any claim or liability for injury or loss of any party, including costs of defense, arising from damage done to subterranean structures and utilities not identified or accurately located. In addition, Client agrees to compensate BVNA for any time spent or expenses incurred by BVNA in defense of any such claim with compensation to be based upon BVNA's prevailing fee schedule and expense reimbursement policy.

5. **Contamination:** Client acknowledges that it is impossible for BVNA to know the exact composition of a site's subsurface, even after conducting a comprehensive exploratory program. As a result, there is a risk that drilling and sampling may result in contamination of certain subsurface areas. Although BVNA will take reasonable precautions to avoid such an occurrence, Client waives any claim against, and agrees to defend, indemnify and save BVNA harmless from any claim or liability for injury or loss which may arise as a result of subsurface contamination caused by drilling, sampling, or monitoring well installation. Client also agrees to adequately compensate BVNA for any time spent and expenses incurred in defense of any such claim.

6. **Compensation:** Compensation to be paid to BVNA shall be in accordance with the Schedule of Fees set forth in the BVNA proposal associated with the specific assignment.

7. **Method of Payment:** Dependent on the duration of the project, BVNA reserves the right to submit monthly billings to Client describing the work performed during the preceding month. Client shall pay BVNA no later than thirty (30) days after receipt of the monthly invoice by Client's staff. Client may be liable to BVNA for a late charge accruing from the date of such invoice to the date of payment at the lower of eighteen (18) percent per annum or the maximum rate allowed by law. Further, if the invoice is not paid within such period, BVNA may, at any time, and without waiving any other rights or claims against Client and without thereby incurring any liability to Client, elect to terminate performance of services immediately following written notice from BVNA to Client. Notwithstanding any such termination of services, Client shall pay BVNA for all services rendered by BVNA up to the date of termination of services plus all interest, termination costs and expenses incurred by BVNA. Client shall

reimburse BVNA for all costs and expenses of collection, including reasonable attorney's fees.

8. **Ownership of Documents:** All plans, studies, documents and other writings prepared by BVNA, its officers, employees and agents and subcontractors in the course of implementing this Agreement shall remain the property of BVNA, until full payment of services is received. The Client acknowledges that all intellectual property rights related to the performance of the Agreement, including but not limited to the names, service marks, trademarks, inventions, logos and copyrights of BVNA and its affiliates, (collectively, the "**Rights**") are and shall remain the sole property of BVNA or its affiliates and shall not be used by the Client, except solely to the extent that the Client obtains the prior written approval of BVNA and then only in the manner prescribed by BVNA. If BVNA terminates the Agreement in accordance with the provisions of Article 32 below, any such license granted by BVNA to the Client, prior to termination and payment of fees, shall continue.

BVNA may, however, retain one archival copy of all reports delivered to Client and of all working papers necessary to support BVNAs analysis, conclusions, or recommendations.

9. **Use of Data or Services:** BVNA shall not be responsible for any loss, liability, damage, expense or cost arising from any use of BVNA's analyses, reports, certifications, advice or reliance upon BVNA's services, which is contrary to, or inconsistent with, or beyond the provisions and purposes set forth therein or included in these Terms and Conditions, or in the Companion Documents. Client understands and agrees that BVNA's analyses, reports, certifications and services shall be used solely by the Client, and only Client is allowed to rely on such work product.

10. **Independent Contractor:** It is understood that BVNA, in the performance of the work and services agreed to be performed, shall act as and be an independent contractor and shall not act as an agent or employee of the Client. BVNA shall obtain no rights to retirement benefits or other benefits which accrue to Client's employees, and BVNA hereby expressly waives any claim it may have to any such rights.

11. **Standard of Care: BVNA REPRESENTS THAT THE SERVICES, FINDINGS, RECOMMENDATIONS AND/OR ADVICE PROVIDED TO CLIENT WILL BE PREPARED, PERFORMED, AND RENDERED IN ACCORDANCE WITH PROCEDURES, PROTOCOLS AND PRACTICES ORDINARILY EXERCISED BY PROFESSIONALS IN BVNA'S PROFESSION FOR USE IN SIMILAR ASSIGNMENTS, AND PREPARED UNDER SIMILAR CONDITIONS AT THE SAME TIME AND LOCALITY. CLIENT ACKNOWLEDGES AND AGREES THAT BVNA HAS MADE NO OTHER IMPLIED OR EXPRESSED REPRESENTATION, WARRANTY OR CONDITION WITH RESPECT TO THE SERVICES, FINDINGS, RECOMMENDATIONS OR ADVICE TO BE PROVIDED BY BVNA PURSUANT TO THIS AGREEMENT.**

12. **Indemnity:** Subject to the Limitation of Liability included in this Agreement, BVNA shall indemnify and hold harmless Client from and against losses, liabilities, and reasonable costs and expenses (for property damage and bodily injury, including reasonable attorney's fees), to the extent directly and proximately arising from BVNA's negligent performance of services or material breach under this Agreement. BVNA shall not be obligated to defend the Client until there is an actual finding of negligence or if the parties agree otherwise. Client shall defend, indemnify and hold harmless BVNA, its employees, directors, officers, and agents, from and against claims, losses, liabilities, and reasonable costs and expenses (including reasonable attorney's fees) that are: i) related to, or caused by the negligence or willful misconduct of Client, its employees, or agents; ii) related to this Agreement or the work to be performed by BVNA for which BVNA is not expressly responsible; or iii) the expressed responsibility of the Client under this Agreement.

13. **Limitation of Liability:** To the fullest extent permitted by law and notwithstanding anything else in this Agreement to the contrary, the total aggregate liability of BVNA, its affiliates, employees, officers, directors and agents (Collectively referred to in this paragraph as "BVNA") for all claims for negligent professional acts, errors or omissions arising out of this Agreement is limited to five times the fees paid within the previous 12 months.

In the event liability is shared by the parties to this Agreement, each Party shall contribute in the amount of its proportionate share for all actions, claims, liability, damages, losses, expenses or judgments. BVNA's indemnification obligation including any defense obligation shall not arise until an actual finding of negligence or if the parties agree prior to an actual finding of negligence.

14. **Insurance:** BVNA, at BVNA's own cost and expense, shall procure and maintain, for the duration of the contract, the following insurance policies with insurers possessing a Best's rating of no less than A:VII:

a. **Workers' Compensation Coverage:** BVNA shall maintain Workers' Compensation and Employer's Liability Insurance for its employees in accordance with the laws of the state where the services are being performed. Any notice of cancellation or non-renewal of all Workers' Compensation policies will be sent to the Client in accordance with the policy provisions.

b. **General Liability Coverage:** BVNA shall maintain Commercial General Liability insurance in an amount not less than one million dollars ($1,000,000) per occurrence for bodily injury, personal injury and property damage.

c. **Automobile Liability Coverage:** BVNA shall maintain Automobile Liability insurance covering bodily injury and property damage for activities of BVNA employee arising out of or in connection with the work to be performed under this Agreement, including coverage for owned, hired and non-owned vehicles, in an amount not less than one million dollars ($1,000,000) combined single limit for each occurrence.

d. **Professional Liability Coverage:** BVNA shall maintain Professional Errors and Omissions Liability for protection against claims alleging negligent acts, errors or omissions which may arise from BVNA's services under this Agreement. The amount of this insurance shall not be less than one million dollars ($1,000,000) on a claims-made annual aggregate basis.

BVNA shall name Client as additional insured and other parties that it deems appropriate to be additionally insured under BVNA's Commercial General Liability policy and Automobile Liability policy, if requested to do so by Client. The Client, on its own behalf and on the behalf of any others that are named as additionally insured at Client's request, agrees that providing such insurance or the additional insured endorsement shall in no way be construed as an assumption by BVNA of any liability for the negligence or willful misconduct or any wrongful behavior on the part of Client or others that are named additionally insured. In the event of insurance cancellation, notice will be delivered in accordance with the policy provisions.

15. **Consequential and Punitive Damages:** Neither BVNA nor Client shall be liable under any circumstances for loss of profits, loss of product, consequential damages of any kind, indirect damages of any kind or special damages of any kind to the other party, or to any third party. No punitive or exemplary

damages of any kind shall be recoverable against either party under any circumstances.

16. **Cause of Action:** If Client makes a claim against BVNA, for any alleged error, omission, or other act arising out of the performance of its professional services and to the extent the Client fails to prove such claim, then the Client shall pay all costs including attorney's fees incurred by BVNA in defending the claim. Any cause of action brought against BVNA shall be brought within one (1) year of the work or services performed under this Agreement.

17. **Compliance with Laws:** BVNA shall use the standard of care in its profession to comply with all applicable federal, state and local laws, codes, ordinance and regulations in effect as of the date services are provided.

18. **Resolution of Disputes:** All claims, disputes, controversies or matters in question arising out of, or relating to, this Agreement or any breach thereof, including but not limited to disputes arising out of alleged design defects, breaches of contract, errors, omissions, or acts of professional negligence, except those disputes which arise out of or are related to collection matters or fees alone under this Agreement, (collectively "Disputes") shall be submitted to mediation before and as a condition precedent to pursuing any other remedy. Upon written request by either party to this Agreement for mediation of any dispute, Client and BVNA shall select a neutral mediator by mutual agreement. Such selection shall be made within ten (10) calendar days of the date of receipt by the other party of the written request for mediation. In the event of failure to reach such agreement or in any instance when the selected mediator is unable or unwilling to serve and a replacement mediator cannot be agreed upon by Client and BVNA within ten (10) calendar days, a mediator shall be chosen as specified in the Mediation Rules of the American Arbitration Association then in effect, or any other appropriate rules upon which the parties may agree.

Should either party to this Agreement commence any legal action against the other party arising out of this Agreement, the prevailing party shall be entitled to recover its reasonable litigation expenses, including court costs, expert witness fees, discovery expenses, and attorney's fees.

19. **Governing Law:** This Agreement shall be governed by and construed in accordance with the laws of the state where the BVNA office originating the work or proposal is located.

20. **Releases:** All lien releases will be limited to payment issues; no additional terms and conditions may be added to a release of lien.

21. **Waiver of Jury Trial:** Each party waives its right to a jury trial in any court action arising between the parties, whether under this Agreement or otherwise related to the work being performed under this Agreement.

22. **Third Party Beneficiary:** It is expressly understood and agreed that the enforcement of these terms and conditions shall be reserved to the Client and BVNA. Nothing contained in the Agreement shall give or allow any claim or right of action whatsoever by any third person. It is the express intent of the Client and BVNA that any such person or entity, other than Client or BVNA, receiving services or benefits under this Agreement shall be deemed an incidental beneficiary.

Third Party Rights: Client agrees that all work product shall be used solely by it and only Client is allowed to rely on such work product. If a third party relies on the work product without BVNA's written permission, then Client agrees to indemnify and hold BVNA harmless for any claims or actions brought as a result of such reliance.

23. **Written Notification:** Any notice, demand, request, consent, approval or communication that either party desires or is required to give to the other party shall be in writing and either served personally or sent prepaid, first class mail. Any such notice, demand, etc., shall be addressed to the other party at the address set forth in the proposal. Either party may change its address by notifying the other party of the change of address. Notice shall be deemed communicated within 48 hours from the time of mailing if mailed as provided in this section.

To Client:	Dividend Homes Inc. 385 Woodview Avenue, Suite 100 Morgan Hill, California 95037
To BVNA:	Robert Lieckfield, Jr. Vice President, HSE Division 22345 Roethel Novi, MI 48375
With cc to:	Bureau Veritas North America, Inc. Attention: Legal Department 1601 Sawgrass Corporate Parkway, Suite 400 Fort Lauderdale, FL 33323

24. **Confidential Information:** Neither party shall disclose information identified as confidential to anyone except those individuals who need such information to perform the Services; nor should either party use such confidential information, except in connection with the Work, the performance of the Services or as authorized by the other party in writing. Regardless of the term of this Agreement, each party shall be bound by this obligation until such time as the confidential information shall become part of the public domain. Confidential information shall not include information which is either: (i) known to the public; (ii) was known to the receiving party prior to its disclosure; or (iii) received in good faith from a third party. If either party is required to produce information by valid subpoena or Court order, parties agree to first provide prompt notice to other party in order to allow the party to seek a protective order or other appropriate remedy. This shall not prevent either party from disclosing information to the extent reasonably necessary to substantiate a claim or defense in any adjudicatory proceeding. Client agrees that BVNA shall be permitted to use Client's name and logos in BVNA's marketing materials unless advised or prohibited against it by the Client in writing. The technical and pricing information contained in any proposal or other documents submitted to Client by BVNA is to be considered confidential and proprietary and shall not be released or disclosed to a third party without BVNA's written consent.

25. **Assignment:** Neither party may assign this Agreement or any right or obligation hereunder without the prior written consent of the other party, which shall not be unreasonably withheld or delayed; provided, however, that no consent shall be necessary in the event of an assignment to a successor entity resulting from a merger, acquisition or consolidation by either party or an assignment to an Affiliate of either party if such successor or Affiliate assumes all obligations under this Agreement. Any attempted assignment, which requires consent hereunder, shall be void and shall constitute a material breach of this Agreement if such consent is not obtained.

Disputes: In all disputes arising under this Agreement, the parties agree that the prevailing party shall be entitled to recover its reasonable attorney's fees (including, if applicable, charges for in-house counsel), court costs and other legal expenses from the other party.

26. **Non-Solicitation / Hiring of Employees:**

To promote an optimum working relationship, the Parties agree in good faith not to directly or indirectly employ or otherwise engage any employee or any person employed by the other Party within the prior six month period without the prior written consent of the Party. This restriction shall apply during the term of and for a period of one (1) year after the termination of this Agreement. The Parties further agree that loss of any such employee would involve considerable financial loss of an amount that could not be readily established. Therefore, in the event that a Party should breach this provision and without limiting any other remedy that may be available the breaching Party shall pay a sum equal to the employee's current annual salary plus 12 additional months of the employee's current annual salary for training of a new employee as liquidated damages. . For the avoidance of doubt, newspaper, periodical or Internet-based listings of employment opportunities by a party shall not be considered solicitation of an employee of the other party.

27. **Prevailing Wage:** This Agreement and any proposals hereunder specifically exclude compliance with any project labor agreement or other union or apprenticeship requirements. In addition, unless explicitly agreed to in the body of the proposal, this Agreement and any proposals hereunder specifically exclude compliance with any State or Federal prevailing wage law or associated requirements, including the Davis Bacon Act. Due to the professional nature of its services BVNA is generally exempt from the Davis Bacon Act and other prevailing wage schemes. It is agreed that no applicable prevailing wage classification or wage rate has been provided to BVNA, and that all wages and cost estimates contained herein are based solely upon standard, no-prevailing wage rates. Should it later be determined by the Client or any applicable agency that in fact prevailing wage applies, then it is agreed that the contract value of this agreement shall be equitably adjusted to account for such changed circumstance. These exclusions shall survive the completion of the project and shall be merged into any subsequently executed documents between the parties, regardless of the terms of such agreement. Client will reimburse, defend, indemnify and hold harmless BVNA from any liability resulting from a subsequent determination that prevailing wage regulations cover the Projects, including all costs, fines and reasonable attorney's fees.

28. **Waiver:** No failure on the part of either party to exercise any right or remedy hereunder shall operate as a waiver of any other right or remedy that party may have hereunder.

29. **Amendments:** This Agreement may be modified or amended only by a written document executed by both BVNA and Client.

30. **Entire Agreement:** This Agreement constitutes the complete and exclusive statement of Agreement between the Client and BVNA. All prior written and oral communications, including correspondence, drafts, memoranda, and representations, are superseded in total by this Agreement.

31. **Document Precedence:** Any pre-printed forms including, but not limited to: purchase orders, shipping instructions, or sales acknowledgment forms of either Party containing terms or conditions at variance with or in addition to those set forth herein shall not in any event be deemed to modify or vary the terms of this Agreement.

32. **Termination:** This Agreement may be terminated immediately for cause or by either party without cause upon fifteen (15) days written notice of termination. Upon termination, BVNA shall be entitled to compensation for services performed up to the effective date of termination.

33. **Interpretation of Agreement:** This Agreement shall be interpreted as though prepared by all parties and shall not be construed unfavorably against either party.

34. **Severability of Agreement:** If any provision or provisions of this Agreement shall be held to be invalid, illegal, unenforceable or in conflict with the laws of any jurisdiction, the validity, legality and enforceability of the remaining provisions shall not in any way be effected and shall remain in full force and effect.

Owner Representative/Property Manager Questionnaire

*Please explain all 'yes' answers and mark N/A if you do not know the answer or it doesn't apply

Name	Rick Singer
Title	Manager
Company	Llagas, LLC.
How long have you been associated with the site?	20 years
What is the address of the site?	Multiple... Cochrane Rd, Hatfield, Dewitt, Morgan Hill
Who is the owner of the property?	Llagas, LLC.
When were the buildings onsite (if any) constructed?	?
Do you know the previous use of the site?	Some farming
What companies supply utilities to the subject property? Gas Electricity Water Sewer	1) PG&E for gas + electricity. 2) Santa Clara Valley Water Dist. for water
What company picks up trash and how often?	N/A
Do you know if any environmental work has been done at the property? If so, please describe.	N/A
Do you know if any hazardous materials are currently or previously stored onsite or if hazardous waste was generated onsite? If so, please provide details.	Fertilizer only, maybe for the trees. Not onsite currently, maybe in the past
Do you know of any underground storage tanks previously associated with this site? If so, please provide details in next column:	How many? Capacity? Contents? N/A Construction Material? When were they installed? If removed, when were they removed and by what company?

	Were soil samples collected? Was an agency there to witness?
Do you know of any aboveground storage tanks associated with this site, past or present? If so, please provide details in next column:	How many? 2 Location? Near barn Capacity? ? 5,000 gal. Contents? Water Construction Material? ? When were they installed? No idea When were they removed? Haven't
Do you know of any sumps, clarifiers, or grease interceptors associated with this site, past or present? If so, please provide details in next column:	Time frame located onsite (when installed/removed)? Location? What used for? Capacity? Who serviced and how often? N/A What company removed? Were soil samples collected? Was there regulatory agency oversight of removal?
Do you know of any septic systems currently or formerly located onsite? If so, please provide details in next column:	Time frame located onsite? Could be Location? → near the house Removal procedures if any? None
Do you know of any in-ground hydraulic equipment associated with this site, past or present? If so, please provide details in next column:	How many? Location? Time frame located onsite (when installed/removed)? N/A What company removed them? Were samples collected from soil? Was there local agency oversight of removal?
Are you aware of any wells ever onsite (for example: Irrigation, groundwater,	When installed? ~~4~~ ? How many? 1

groundwater monitoring, soil vapor extraction)? If so, please provide details in next column:	Where located? Near the house Currently operating? No Abandoned? If so, when? And was it in accordance with agency? Which one? ?

Are you aware of any of the following?

Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property. No

Any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property. No

Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products. No

If you answered yes to any of the above three questions, will you please provide an explanation:

RE: CITY DIRECTORY RESEARCH
Fry Property
1105 Half Road Morgan Hill, CA

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

ENVIRONMENTAL LIEN REPORT

Order No: *20190624041-1*

The ERIS Environmental Lien Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied property information to:

- Search for parcel information and / or legal description
- Search for ownership information
- Research official land title documents recorded at jurisdictional agencies such as recorder's' office, registries of deeds, county clerks' offices, etc.
- Access a copy of the deed
- Search for environmental encumbrance(s) associate with the deed
- Provide a copy of any environmental encumbrance(s) based upon a review of keywords in the instrument(s) (title, parties involved and description)
- Provide a copy of the deed or cite documents reviewed

Thank You for Your Business
Please contact ERIS at **416-510-5204** or **info@erisinfo.com**
with any questions or comments

LIMITATION

This report is neither a guarantee of title, a commitment to insure, or a policy of title insurance. ERIS – Environmental Risk Information Services does not guarantee nor include any warranty of any kind whether expressed or implied, about the validity of all information included in this report since this information is retrieved as it is recorded from various agencies that make it available. The total liability is limited to the fee paid for this report.

ENVIRONMENTAL LIEN REPORT

Order No: *20190624041-1*

The ERIS Environmental Lien Search Report is intended to assist in the search for environmental liens filed in land title records.

LEGAL DESCRIPTION EXHIBIT

All that certain Real Property in the City of Morgan Hill, County of Santa Clara, State of California, described as follows:

PARCEL ONE

All of Parcel 1, as shown upon that certain Parcel Map of a portion of the Rancho Laguna Seca, which Map was filed for record in the Office of the Recorder of the County of Santa Clara, State of California, on August 15, 1969, in Book 258 of Maps, at Page 3.

PARCEL TWO

A non-exclusive easement for the installation and maintenance of water pipe lines, along the Northeasterly 15.00 feet of the following described Parcel of Land:

Beginning at the most Southerly corner of that certain 32.824 Acre Parcel of Land shown on that certain record of survey recorded in Book 70 of Maps, at Page 52 in the Office of the Recorder of Santa Clara County; thence from said Point of Beginning North 36 deg 22' 20" West, 354.96 feet to the True Point of Beginning of this description; thence from said True Point of Beginning along the following course and distances; North 36 deg 22' 20" West, 270.81 feet; South 50 deg 54' 33" West, 386.11 feet; South 36 deg 21' 30" East, 270.81 feet, North 50 deg 54' 34" East, 386.17 feet; to the True Point of Beginning of this description.

PARCEL THREE

All of Parcel 2, as shown upon that certain Parcel Map of a portion of the Rancho Laguna Seca, which Map was filed for record in the Office of the Recorder of the County of Santa Clara, State of California, on August 15, 1969 in Book 258 of Maps, at Page 3.

PARCEL FOUR

A non-exclusive easement for Ingress and Egress and for the installation and maintenance of public utilities appurtenant to the above-described Parcel One over a strip of land 40.00 feet in width, the Northeasterly line of which is described as follows:

Beginning at an iron pipe set at the Southernmost corner of that certain 32.83 Acre Tract of Land described in the Deed from Thomas Nom, et ux, to Der Sang, dated July 26, 1945, recorded October 18, 1945, in Book 1298 Official Records, Page 253, Santa Clara County Records, in the Northwesterly line of Half Road, as said Road is shown upon that certain Map entitled, "Record of Survey Part of Rancho Laguna Seca", which Map was filed for record inthe Office of the Recorder of the County of Santa Clara, State of California, on July 2, 1956 in Book 70 of Maps, at Page 52; thence from said Point of Beginning, North 45 deg 23' East along said Northwesterly line of Half Road for a distance of 40.42 feet to the True Point of Beginning of the easement to be described; thence from said True Point of Beginning North 36 deg 21' 30" West and parallel with the Southwesterly line of said 32.83 Acre Tract for a distance of 663.36 feet more or less to the terminus of said easement.

PARCEL FIVE

LEGAL DESCRIPTION EXHIBIT

A non-exclusive easement for the installation and maintenance of water pipe lines appurtenant to the above-described Parcel One, over a strip of land 15.00 feet in width, the center line of which is described as follows:

Beginning at the most Northeasterly corner of that certain 16.275 Acre Parcel of Land conveyed to Anthony and Prudy Alberti from C. P. Alberti and shown on that certain Record of Survey recorded in Book 70 of Maps, at Page 52 in the Office of the Recorder of Santa Clara County; thence from said Point of Beginning South 50 deg 41' West 7.50 feet to the True Point of Beginning of this description; thence from said True Point of Beginning along the following courses and distances; South 36 deg 22' 20" East 1298.30 feet; South 50 deg 54' 34" West 378.67 feet to the terminus point of easement.

Job No. 3985.102

Mr. Robin Miller
Trumark Homes
3001 Bishop Drive, Suite 100
San Ramon, California 94584

Subject: *DRAFT*
CARB 435 Testing
Fry's Property
1040-1045 Cochrane Road and 1065-1105 Half Road
Morgan Hill, California

Dear Mr. Miller:

This presents the results of our CARB 435 testing at Fry's Property in Morgan Hill, California.

Our scope of services consisted of the following:

1. Excavating 20 test pits of the serpentine derived fill (October 22 & 23, 2018).
2. Visually classifying and logging the material encountered in the test pits.
3. Collecting one representative sample of the serpentine derived fill from each test pit (20 total samples).
4. The test pits were backfilled using the excavated material and wheel rolled.
5. Performed CARB Test Method 435 – Determination of Asbestos Content of Serpentine Rock on each of the samples.

SAMPLING PROCESS

The sampling process consisted of the following:

1. Excavated through the serpentine derived fill to expose the native soils.
2. Using the excavator, a single uniform scoop was collected along the exposed face of the serpentine derived fill.
3. The serpentine derived fill collected in the bucket was mixed in the excavator bucket and placed into a sample bag.
4. The sample was transported to our laboratory where it was run through a sample splitter.
5. After being run through the sample splitter, approximately 300 grams of serpentine derived fill was placed in bags and submitted for testing.

QUANTITY –SERPENTINE DERIVED FILL

Adjacent to Highway 101 on the northwestern portion of the site there is serpentine derived fill. We previously drilled two borings in this area and encountered 9 feet and 5 feet of serpentine derived fill. The 20 test pits we excavated for CARB 435 testing encountered between 2 to 7 feet

of serpentine derived fill with an average of approximately 5 feet. Based on our test pits and borings, we estimate the volume of serpentine derived fill to be approximately 65,000 to 70,000 cubic yards.

The attached Site Plan (Plate) presents the locations of our borings and test pits, depth of fill encountered in the borings and test pits and delineates the areas of existing fills.

CARB TEST METHOD 435 RESULTS

Each of the 20 samples tested positive for containing chrysotile asbestos fibers. The percent detected ranged from 0.25 percent to 1.75 percent with an average of approximately 1.0 percent. The test results are as follows:

Sample ID	Depth Interval (ft.)	Asbestos Detected (%)
TP 1	0 -2	0.75 CH
TP 2	0 -2.5	1.25 CH
TP 3	0 -3	1.25 CH
TP 4	0 -5	0.50 CH
TP 5	0 - 4	1.25 CH
TP 6	0 - 6	0.75 CH
TP 7	0 - 3.5	1.50 CH
TP 8	0 - 4	1.50 CH
TP 9	0 - 6	1.25 CH
TP 10	0 - 5.5	0.75 CH
TP 11	0 - 6	1.25 CH
TP 12	0 - 4	1.25 CH
TP 13	0 - 3.75	1.25 CH
TP 14	0 - 6	0.75 CH
TP 15	0 - 4.5	0.50 CH
TP 16	0 - 5.5	0.75 CH
TP 17	0 - 5	0.75 CH
TP 18	0 - 7	1.00 CH
TP 19	0 - 5	0.25 CH
TP 20	0 - 4.5	1.75 CH

CH= Chrysotile Asbestos Fibers

The Laboratory Report for the CARB 435 testing is presented in Appendix B.

An environmental consultant with specialized expertise in naturally occurring asbestos (NOA) should be consulted as there are likely differences in the requirements for controlling long-term exposure risks on residential, commercial and industrial sites.

We trust that this letter provides the necessary information. If you have any questions regarding the contents of this report, please contact our office at (925) 484-0220.

Respectfully submitted,

Test Pit Logs

Test Pit Logs

October 22, 2018 – October 23, 2018

TP-1

0.0' – 1.0' Sandy Clay, mottled light gray-brown and light green-gray, dry, very stiff, fine to coarse grained sand, trace gravel (Fill)

1.0' – 2.0' Silty Clay, medium to dark gray-brown, dry, very stiff, some fine to coarse grained sand, trace gravel (Fill)

2.0' – 3.0' Sandy Silt, medium brown, dry to moist, stiff, fine grained sand (Native)

No groundwater encountered.

TP-2

0.0' – 0.5' Silty Clay, dark gray-brown, moist, stiff, trace fine to coarse grained sand (Fill) (CL)

0.5' – 2.5' Clayey Sand, light gray-green, moist, medium dense (Fill)

2.5' – 3.0' Silty Clay, dark gray-brown, moist, stiff (Native)

3.0' – 4.0' Sandy Silt, medium brown, moist, medium stiff, fine grained sand (Native)

No groundwater encountered.

TP-3

0.0' – 2.0' Clayey Sand, light gray-green, dry to moist, medium dense, fine to coarse grained sand, trace fine to coarse gravel and cobbles (Fill)

2.0' – 3.0' Silty Clay, dark gray-brown, moist, stiff, trace fine to coarse grained sand, and angular rock fragments up to 3" in diameter, light gray green mottling (Fill)

3.0' – 4.0' Clayey Silt, red-brown, moist, medium stiff, trace fine to medium grained sand (Native)

No groundwater encountered.

TP-4

0.0' – 4.0' Clayey Sand, light gray-green, dry to moist, medium dense, fine to coarse grained sand, some fine to coarse gravel, trace cobbles and boulders (Fill)

4.0' – 5.0' Sandy Clay, dark gray-brown, moist, stiff, minor gray-green mottling (Fill)

5.0' – 6.0' Sandy Silt, medium to dark red-brown, dry to moist, medium stiff, fine to coarse grained sand, trace fine to coarse gravel (Native)

No groundwater encountered.

TP-5

0.0' – 3.0' Silty Sand, light gray-green, dry, medium dense, fine to coarse grained sand, some fine to coarse gravel and trace cobbles (Fill)

3.0' – 4.0' Sandy Clay, dark gray-brown, dry to moist, stiff to very stiff, light gray-brown and light gray-green mottling (Fill)

4.0' – 5.0' Clayey Silt, red-brown, dry, medium stiff, trace fine to medium grained sand (Native)

No groundwater encountered.

TP-6

0.0' – 5.0' Silty Sand with Clay, light green-gray, dry to moist, medium dense, fine to coarse grained sand, some fine to coarse gravel, trace cobbles and occasional boulders (Fill)

5.0' – 6.0' Silty Clay, gray-brown, dry to moist, medium stiff, some fine to coarse grained sand, trace fine to coarse gravel, minor gray-green mottling (Fill)

6.0' – 7.0' Sandy Silt, medium to dark red-brown, dry to moist, medium dense, fine to medium grained sand (Native)

No groundwater encountered.

TP-7

0.0' – 2.5'	Clayey Sand, light gray-green, dry to moist, medium dense, fine to coarse grained sand, some fine to coarse gravel, trace cobbles (Fill)
2.5' – 3.5'	Sandy Clay, dark gray-brown, dry to moist, stiff, fine to coarse grained sand, trace fine to coarse gravel, minor light gray-green mottling (Fill?)
3.5' – 4.0'	Sandy Silt, red-brown, dry, medium stiff, fine to coarse grained sand (Native)

No groundwater encountered.

TP-8

0.0' – 3.0'	Clayey Sand, light green-gray, dry, dense, fine to coarse grained sand, some fine to coarse gravel, trace cobbles (Fill)
3.0' – 4.0'	Silty Clay, mottled dark gray-brown and light gray-brown and light green-gray (Fill)
4.0' – 5.0'	Sandy Silt, red-brown, dry to moist, medium stiff, fine to medium grained sand (Native)

No groundwater encountered.

TP-9

0.0' – 6.0'	Clayey Sand, light gray-green, dry to moist, medium dense, fine to coarse grained sand, some fine to coarse gravel, trace cobbles, occasional boulders up to 24" in diameter (Fill)
6.0' – 7.0'	Sandy Silt, light to medium red-brown, moist to wet, medium stiff, fine to medium grained sand (Native)

TP-10

0.0' – 1.0' Mixed Sandy Clay and Clayey Sand, mottled dark gray-brown and light green-gray and light gray-brown, dry to moist, stiff/medium dense, fine to coarse grained sand, some fine to coarse gravel, trace cobbles and occasional boulders (Fill)

1.0' – 5.5' Clayey Sand, mottled light green-gray and light to medium brown-green, dry to moist, medium dense, fine to coarse grained sand, some fine to coarse gravel, trace boulders (Fill)

5.5' – 6.0' Silty Clay, dark gray-brown, moist, stiff, trace fine to medium grained sand (Native)

6.0' – 7.0' Clayey Silt, light to medium red-brown, moist, stiff, trace fine to medium grained sand (Native)

No groundwater encountered.

TP-11

0.0' – 6.0' Clayey Sand, light gray-green, dry to moist, medium dense, fine to coarse grained sand, some fine to coarse gravel, occasional cobbles, top 3' limonite stains (Fill)

6.0' – 7.0' Silty Clay, light to medium red-brown, moist, stiff, trace fine grained sand (Native)

No groundwater encountered.

TP-12

0.0' – 4.0' Clayey Sand, light gray-green, dry to moist, medium dense, fine to coarse grained sand, some fine to coarse gravel, occasional cobbles, sporadic limonite stains (Fill)

4.0' – 5.0' Sandy Silt, red-brown, moist, medium stiff, fine grained sand (Native)

No groundwater encountered.

TP-13

0.0' – 3.75' Clayey Sand, light gray-green, dry to moist, medium dense, fine to coarse grained sand, some fine to coarse gravel, occasional cobbles (Fill)

3.75' – 5.0' Sandy Silt, red-brown, dry to moist, medium stiff, fine to medium grained sand (Native)

No groundwater encountered.

TP-14

0.0' – 1.5' Clayey Sand, light gray-brown, dry to moist, medium dense, fine to coarse grained sand, trace fine to coarse gravel (Fill)

1.5' – 2.5' Clayey Sand, mottled gray-brown and light to medium red-brown and light gray-green, dry to moist, medium dense, fine to coarse grained sand, wood and metal debris (Fill)

2.5' – 6.0' Clayey Sand, light to medium green-brown, dry to moist, medium dense, fine to coarse grained sand, trace fine to medium gravel (Fill)

6.0' – 7.0' Silty Clay, light to medium brown, moist, medium stiff, trace fine grained sand (Native)

No groundwater encountered.

TP-15

0.0' – 3.0' Silty Sand, light green-gray, dry, medium dense, fine to coarse grained sand, trace fine to coarse gravel and cobbles (Fill)

3.0' – 4.5' Clayey Sand, light green-brown, dry, medium dense, fine to coarse grained sand, trace fine to coarse gravel, occasional cobbles and boulders (Fill)

4.5' – 6.0' Sandy Silt, red-brown, moist, medium stiff, fine to medium grained sand (Native)

No groundwater encountered.

TP-16

0.0' – 2.0' Sandy Clay, light to medium gray-brown, dry to moist, medium stiff, fine to coarse grained sand, trace fine to coarse gravel, minor AC-debris (Fill)

2.0' – 5.5' Clayey Sand, light gray-green, dry to moist, medium dense, fine to coarse grained sand, trace fine to coarse gravel, occasional cobbles and boulders (Fill)

5.5' – 6.5' Silty Clay, light to medium red-brown, moist, stiff, trace fine to medium grained sand (Native)

No groundwater encountered.

TP-17

0.0' – 2.0' Sandy Clay, gray-brown, dry, stiff, fine to coarse grained sand, trace fine to coarse gravel (Fill)

2.0' – 3.5' Clayey Sand, light gray-green, dry to moist, medium dense, fine to coarse grained sand, trace fine to coarse gravel, occasional cobbles and boulders (Fill)

3.5' – 5.0' Silty Sand, light gray-brown, moist, medium dense, trace clay, fine to coarse grained sand, trace fine to coarse gravel, minor AC-debris (Fill)

No groundwater encountered.

TP-18

0.0' – 3.0' Sandy Clay/Clayey Sand, light green-brown, dry to moist, dense/very stiff, fine to coarse grained sand, some fine to coarse gravel, occasional cobbles and boulders (Fill)

3.0' – 6.0' Clayey Sand, light gray-green, dry to moist, medium dense, fine to coarse grained sand, trace fine to coarse gravel and cobbles (Fill)

6.0' – 7.0' Sandy Clay, dark gray-brown, dry to moist, very stiff, fine to coarse grained sand, trace fine gravel, light gray-green mottling (Fill)

7.0' – 7.5' Clayey Silt, light red-brown, moist, medium stiff, trace fine to medium grained sand (Native)

No groundwater encountered.

TP-19

0.0' – 5.0' Clayey Sand, light green-gray, dry to moist, dense, fine to coarse grained sand, some fine to coarse gravel, trace cobbles, occasional boulders (Fill)

5.0' – 10.0' Gravelly Sand, gray-brown, dry to moist, dense, fine to coarse grained sand, fine to coarse gravel, trace silt (Native)

No groundwater encountered.

TP-20

0.0' – 4.5' Clayey Sand, light gray-green, dry to moist, medium dense, fine to coarse grained sand, trace fine to coarse gravel, occasional cobbles (Fill)

4.5' – 5.5' Sandy Silt, red-brown, moist to dry, medium stiff, fine to medium grained sand (Native)

No groundwater encountered.

DISCLAIMER NOTES

· "ND" indicates no asbestos was detected; the method detection limit is 0.25%.
· "Trace" or "<" indicates asbestos was identified in the sample, but the concentration is less than the method quantitation limit. PLM coefficients of variance range from approximately 1.8 at the quantitation limit of 0.25% to 0.32 at high fiber concentrations.
· Samples are archived for three months following analysis and are then properly discarded.
· These results are submitted pursuant to RJ Lee Group's current terms and conditions of sale, including the company's standard warranty and limitation of liability provisions. No responsibility or liability is assumed for the manner in which these results are used or interpreted.
· This test report relates to the items tested.
· This report is not valid unless it bears the name of a NVLAP Lab Code 101208-0 approved signatory.
· Any reproduction of this document must be in full in order for the report to be valid.
· This report may not be used to claim product endorsement by NVLAP Lab Code 101208-0, any agency of the U.S. Government or any other laboratory accrediting agency.
· Polarized-light microscopy is not consistently reliable in detecting asbestos in floor coverings and similar nonfriable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as "non-asbestos-containing."
· Sample(s) for this project were analyzed at our: Monroeville, PA (AIHA #100364, NY ELAP #10884) facility.
· If RJ Lee Group, Inc. did not collect the samples analyzed, the verifiability of the laboratorys results are limited to the reported values.
· ((100-A)/B)*C = Asbestos Detected (%), where A=weight loss, B=total # of points counted, and C=total # of asbestos fibers counted.

Subject: Additional Investigation of Lead in Soil
1040-1045 Cochrane Road
Morgan Hill, California 95037
AEI Project No. 393757

Dear Ms. Miller:

AEI Consultants (AEI) is pleased to provide this report which describes the activities and results of the Additional Investigation of Lead in Soil performed at 1040-1045 Cochrane Road (the "Site") in Morgan Hill, California (Figures 1 and 2). This investigation was completed in general accordance with the scope of services outlined in AEI's proposal number 60545.

1.0 SITE DESCRIPTION

The Site is located southwest of Highway 101 and between Cochrane Road and Half Road in Morgan Hill, California. The Site is comprised of approximately 87.6-acres of land, which is currently and historically used for agricultural purposes. The Site is identified by three Santa Clara County's County Assessor's Parcel Numbers: 728-31-14, 728-30-1, 728-30-4, 728-30-6, and 728-30-9.

According to information obtained from the United States Geological Survey (USGS) mapping database, the Site is underlain by alluvial gravel, and valley sand and clay deposits. Based on AEI's review of groundwater monitoring data obtained from the State of California Geotracker database for a nearby site indicates that the depth to groundwater in the area is estimated at 156 below ground surface (bgs). Regional topographic conditions suggest that the direction of groundwater is to the southwest.

2.0 BACKGROUND

A Draft Phase I Environmental Site Assessment (ESA) was performed by AEI as detailed in a report dated June 6, 2018. Based on a review of the ESA, the Site was identified to have been used for agricultural purposes from as early as 1939 to present. There is a potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, used onsite have in impacted the Site. Based on this, there is a potential that organochlorine pesticides (OCPs) or arsenic have been used on-site that could have impacted shallow surface soils.

A Phase II Limited Agricultural Investigation (Phase II) was performed by AEI as detailed in a report dated September 20, 2018. The Phase II consisted of near-surface soil samples were collected at sixty-eight (68) locations throughout the Site, designated as SS-1A-D through SS-15A-D, SS-R-16A-D and SS-R-17A-D. Samples SS-1A-D through SS-15A-D were composited by the laboratory into fifteen (15) four-point composite samples (S1-S15 COMP), for the analysis of OCPs. One sample from each composite (SS-1A through SS-15A) was set aside for discrete analysis of arsenic and lead. Samples SS-R-16A-D and SS-R-17A-D were analyzed for arsenic and lead.

No OCPs analyzed exceeded their corresponding ESLs for residential or commercial direct contact scenarios. In addition, arsenic was detected at concentrations ranging from 0.91 mg/kg to 10 mg/kg, which is consistent with typical background concentrations (6.0 – 8.4 mg/kg) for the Morgan Hill area. Lead was found in concentrations above its corresponding residential ESL in three samples SS-R-16A, SS-R-16D, and SS-R-17B. Each of the sample locations with lead concentrations above the residential ESL were collected in the vicinity of the former residence, which is typically associated with the use of lead paint.

AEI understands that the Site is slated for residential redevelopment. Consequently, AEI recommended to collect soil samples in the vicinity SS-R-16A, SS-R-16D, and SS-R-17B to further characterize the nature and extent of elevated lead concentrations in soil.

3.0 INVESTIGATION EFFORTS

AEI performed an additional investigation on October 15, 2018, including the collection of soil samples, to evaluate if the elevated lead concentrations had adversely impacted the property. The completed activities are summarized below, and sample locations are presented on Figure 3:

- Collection of thirty-four (34) soil samples in the vicinity of SS-R-16A, SS-R-16D, and SS-R-17B at a depth between 0 and 2.5 feet below ground surface (bgs) to evaluate shallow soil conditions near the two buildings on the Site to further characterize the nature and extent of elevated lead concentrations from current residential structures.

3.1 Health and Safety Plan

A site-specific health and safety plan was prepared, reviewed by onsite personnel, and kept onsite for the duration of the fieldwork.

3.2 Soil Sampling

A shallow soil sampling program was completed which was consistent with the protocol outlined in the State of California Department of Toxic Substances Control (DTSC) *Interim Guidance for Sampling Agricultural Properties (Third Revision)* dated August 7, 2008.

At the time of the soil sampling, AEI observed the Site as agricultural land. Near-surface soil samples were collected by AEI at seventeen (17) locations throughout the Site, designated as SS-R-16A, SS-R-16A-S1, SS-R-16A-S2, SS-R-16A-W1, SS-R-16A-W2, SS-R-16D, SS-R-16D-E1, SS-R-16D-E2, SS-R-16D-N1, SS-R-16D-N2, SS-R-17B, SS-R-17B-E1, SS-R-17B-E2, SS-R-17B-N1, SS-R-17B-N2, SS-R-17B-W1, and SS-R-17B-W2. At each sampling location two samples were taken at

0.5 feet bgs and 2.5 feet bgs, with the exception of SS-R-17B-E1, SS-R-17B-E2, SS-R-17B-W1, and SS-R-17B-W2. Sample locations SS-R-17B-E1, SS-R-17B-E2, SS-R-17B-W1, and SS-R-17B-W2 could not be advanced to 2.5 feet bgs due to dense soil conditions. Only 0.5-foot bgs samples were collected from each, with the exception of locations SS-R-17B-E2 and SS-R-17B-W2, samples were collected at 1.0 feet bgs. The step out sample locations were 1 foot and 4 feet from the original boring location sampled from AEI's Phase II investigation. The approximate sample locations are shown on Figure 3.

Prior to sampling, loose vegetation and soil was cleared from the ground surface at each sample location and a small hole was dug to a depth of approximately 0.5 foot with a shovel. A hand shovel was then used to scrape soil from the sides of the hole at a depth of between three and six inches and transfer the soil to a clean, laboratory-supplied, 4-ounce glass jars. A hand auger was used to reach a maximum depth of 2.5 feet and transferred the soil to a clean, laboratory-supplied, 4-ounce glass jars.

Upon collection, each sample was labeled with the project name, project number, and the sampling date and time. After labeling, each sample was placed into an insulated, chilled ice chest containing ice for transport to the analytical laboratory. Chain-of-custody documentation was completed and accompanied the soil samples to State of California-certified laboratory.

Upon completion of sample collection, the shallow holes were backfilled with excavated and surrounding surficial soils.

3.3 Equipment Decontamination and Investigation-Derived Waste

The hand sampling equipment and hand auger was decontaminated prior to and/or after collecting each soil sample. The equipment was cleaned using a triple-rinse method, which consisted of an initial wash containing an Alconox detergent and water solution, followed by two (2) potable water rinses.

No investigation derived waste was produced.

4.0 LABORATORY ANALYSES

The soil samples were transferred under appropriate chain-of-custody documentation to a State of California-certified analytical laboratory, McCampbell Analytical, Inc, of Pittsburg, California. All soil samples were analyzed for lead using US EPA Testing Method 6020B. Two of the soil samples were analyzed for Soluble Threshold Limit Concentration (STLC) lead analysis using US EPA Testing Method 6020B (SS-R-16A-S1-0.5 and SS-R-16A-S2-0.5) for waste disposal characterization.

Laboratory analytical documentation is provided in Appendix A.

5.0 ANALYTICAL RESULTS

For the purpose of providing context to the data obtained during this investigation, analytical results are compared to available regulatory screening levels. The San Francisco Bay Regional

Water Quality Control Boards (RWQCB) Environmental Screening Levels (ESLs) for Direct Contact were used for comparison values under a residential land use scenario for this investigation. The ESLs are considered to be conservative. Under most circumstances, and within the limitations described in the ESLs, the presence of a chemical in soil at concentrations below the corresponding ESL and soil criteria may be assumed to not pose a significant threat to human health and the environment.

Table 1 presents a summary of the soil sample analytical results, and laboratory analytical documentation is provided in Appendix A. The results can be summarized as follows:

- Lead concentrations range from 5.1 mg/kg to 350 mg/kg. Lead concentrations from SS-R-16A-0.5 (260 mg/kg), SS-R-16A-S1-0.5 (350 mg/kg), and SS-R-16A-S1-2.5 (110 mg/kg), SS-R-16A-S2-0.5 (350 mg/kg), SS-R-W1-0.5 (300 mg/kg), SS-R-16D-0.5 (120 mg/kg), SS-R-16D-E1-0.5 (180 mg/kg), SS-R-17B-0.5 (150 mg/kg), SS-R-17B-E1-0.5 (120 mg/kg), SS-R-17B-E2-0.5 (240 mg/kg), and SS-R-17B-W2-0.5 (96 mg/kg) exceeded their applicable residential ESL of 80 mg/kg. Additionally, lead concentrations from SS-R-16A-S1-0.5 (350 mg/kg), and SS-R-16A-S2-0.5 (350 mg/kg) exceeded their commercial ESL of 320 mg/kg.

- Two samples were additionally analyzed (SS-R-16A-S1-0.5 and SS-R-16A-S2-0.5) by STLC for lead. Soluble lead was detected above laboratory reporting limits in each of the samples analyzed, at concentrations of 15 and 13 mg/L which is above the hazardous waste criteria for lead of 5.0 mg/L.

6.0 SUMMARY AND CONCLUSIONS

AEI has completed an Additional Investigation of Lead in Soil at the Site to evaluate if the elevated lead concentrations had adversely impacted the property. Near-surface soil samples were collected by AEI at seventeen (17) locations throughout the Site. At each location two samples were taken at 0.5 feet bgs and 2.5 feet bgs, with the exception of SS-R-17B-E1, SS-R-17B-E2, SS-R-17B-W1, and SS-R-17B-W2 due to dense soil conditions.

Lead was found in concentrations above its corresponding residential ESL in ten samples (nine in 0.5 feet bgs and one in 2.5 feet bgs). Each of the sample locations with lead concentrations above the residential ESL were collected in the vicinity of the former residence, which is typically associated with the use of lead paint.

The horizontal and vertical extent of lead in soil exceeding its residential ESL in the vicinity of SS-R-16A, SS-R-16D, and SS-R-17B is defined on Figures 4 and 5 along with the recommended limited remediation area of the source material in the vicinity of the former residences.

Soluble lead was detected above laboratory reporting limits in each of the samples analyzed, at concentrations of 15 and 13 mg/L. This is above the hazardous waste criteria for lead of 5.0 mg/L, should the soil be excavated and disposed off-site. Additional soil profiling is recommended for any excavated lead containing soil prior to off-haul and disposal as it may be classified as hazardous waste. Additional analysis of STLC and Toxicity Characteristic Leaching Procedure

(TCLP) of stockpiled soil is recommended to determine waste disposal requirements prior to disposal of excavated soil.

Naturally Occurring Asbestos (NOA) containing Serpentine fill was identified during a Geotechnical Investigation of the site conducted by Berlogar Stevens & Associates. The limits of the Serpentine fill are delineated on the Site Plan included in the Naturally Occurring Asbestos Serpentine Import Fill report (Appendix B). According to Berlogar Stevens & Associates the estimated quantity of serpentine fill could be as much as 65,000 to 70,000 cubic yards. The NOA content of 12 samples ranged from Non-Detect to 3.5 percent. It is recommended the NOA containing serpentine fill be buried on site and be overlain with a cap of non-NOA soil not less than 3 feet in thickness. A non-NOA soil cap of 7 to 10 feet in thickness is recommended in areas where the excavation for pipelines and foundations (including depressed loading docks) could exceed 3 feet to avoid exposure of the serpentine fill due to utility installation or repairs.

8.0 REPORT LIMITATIONS AND RELIANCE

This report presents a summary of work completed by AEI Consultants. The completed work includes observations and descriptions of site conditions encountered. Where appropriate, it includes analytical results for samples taken during the course of the work. The number and location of samples are chosen to provide the requested information, subject to scope of work for which AEI was retained and limitations inherent in this type of work, but it cannot be assumed that they are representative of areas not sampled. This report should not be regarded as a guarantee that no further contamination beyond that which could have been detected within the scope of this investigation is present beneath the subject property. Undocumented, unauthorized releases of hazardous material, the remains of which are not readily identifiable by visual inspection and are of different chemical constituents, are difficult and often impossible to detect within the scope of a chemical specific investigation.

Any conclusions and/or recommendations are based on these analyses and observations, and the governing regulations. Conclusions beyond those stated and reported herein should not be inferred from this document. These services were performed in accordance with generally

accepted practices, in the environmental engineering and construction field, which existed at the time and location of the work. No other warranty, either expressed or implied, has been made.

This investigation was prepared for the sole use and benefit of Trumark Homes LLC. All reports, both verbal and written, whether in draft or final, are for the benefit of Trumark Homes LLC. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns. Reliance is provided in accordance with AEI's Proposal and Standard Terms & Conditions executed by Trumark Homes LLC. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

If there are any questions regarding our investigation, please do not hesitate to contact AEI at 925-746-6000.

Sincerely,
AEI Consultants

SS-R-17B-W2-1.0	10/15/2018	1.0	12	-
Comparison Values:				
STLC (mg/L)			NA	**5.0**
ESL - Residential Shallow Soil			**80**	NE

Notes:

mg/L	milligrams per liter
mg/kg	milligrams per kilogram
<RL	less than the laboratory reporting limit
bgs	below ground surface
Bold	Result exceeds a regulatory screening
NE	No established comparison value
-	Not analyzed
NA	Not applicable

Comparison Values:

ESL Tier 1: Tier 1 Environmental Screening Levels (ESLs) from February 2016 (Rev. 3) ESL Summary Control Board

STLC: Soluable Threshold Limit Concentraton

ESL Direct Contact: Direct Exposure Human Health for Residential Shallow Soil Exposure; Environmental Screening Levels (ESLs) from February 2016 (Rev. 3) ESL Summary Tables, prepared by the San Francisco Bay Regional Water Quality Control Board

APPENDIX A

LABORATORY ANALYTICAL DATA

McCampbell Analytical, Inc.
"When Quality Counts"

Analytical Report

WorkOrder: 1810832

Report Created for: AEI Consultants

2500 Camino Diablo, Ste.#200
Walnut Creek, CA 94597

Project Contact: Shalom Marquardt
Project P.O.: 175550
Project: 393757; 1040-1045 Cochrane Road

Project Received: 10/16/2018

Analytical Report reviewed & approved for release on 10/18/2018 by:

Yen Cao
Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: AEI Consultants
Project: 393757; 1040-1045 Cochrane Road
WorkOrder: 1810832

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate $250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.

* If metals are requested for water samples and the water type (Matrix) is not specified on the chain of custody, MAI will default to metals by E200.8.

Please provide an adequate volume of sample. If the volume is not sufficient for a MS/MSD a LCS/LCSD will be prepared in its place and noted in the report.

Subject: Limited Agricultural Investigation
1040-1045 Cochrane Road
Morgan Hill, California 95037
AEI Project No. 393757

Dear Mr. McCoy:

AEI Consultants (AEI) is pleased to provide this report which describes the activities and results of the Limited Agricultural Investigation performed at 1040-1045 Cochrane Road (the "Site") in Morgan Hill, California (Figures 1 and 2). This investigation was completed in general accordance with the scope of services outlined in AEI's proposal number 59709.

1.0 SITE DESCRIPTION

The Site is located southwest of Highway 101 and between Cochrane Road and Half Road in Morgan Hill, California. The Site is comprised of approximately 87.6-acres of land, which is currently and historically used for agricultural purposes. The Site is identified by three Santa Clara County's County Assessor's Parcel Numbers: 728-31-14, 728-30-1, 728-30-4, 728-30-6, and 728-30-9.

According to information obtained from the United States Geological Survey (USGS) mapping database, the Site is underlain by alluvial gravel, and valley sand and clay deposits. Based on AEI's review of groundwater monitoring data obtained from the State of California Geotracker database for a nearby site indicates that the depth to groundwater in the area is estimated at 156 below ground surface (bgs). Regional topographic conditions suggest that the direction of groundwater is to the southwest.

2.0 BACKGROUND

A Draft Phase I Environmental Site Assessment (ESA) was performed by AEI as detailed in a report dated June 6, 2018. Based on a review of the ESA, the Site was identified to have been used for agricultural purposes from as early as 1939 to present. There is a potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, used onsite have in impacted the Site.

Based on this, there is a potential that organochlorine pesticides (OCPs) or arsenic have been used on-site that could have impacted shallow surface soils. AEI understands that the Site is

slated for residential redevelopment. Consequently, AEI recommended on-site sampling to evaluate if the Site has been significantly impacted in connection with the historical agricultural use for the protection of the construction workers and future occupants of the Site.

3.0 INVESTIGATION EFFORTS

AEI was requested to perform an investigation, including the collection of shallow soil samples, to evaluate if the above identified REC had adversely impacted the property. The completed activities are summarized below, and sample locations are presented on Figure 3 and Figure 4:

- Collection of near-surface soil samples SS-1 through SS-15 (gridded into 60 separate sampling locations, A through D, and composited by the laboratory into four (4) four-point composite samples) at a depth between zero and one (1) foot below ground surface (bgs) to evaluate shallow soil conditions beneath the Site for potential pesticide impacts from former and current agricultural operations.
- Collection of fifteen (15) discrete near-surface soil samples (SS-1A through SS-15A) at a depth between zero and one (1) foot bgs to evaluate for potential arsenic and lead impacts to the Site from the former and current agricultural operations.
- Collection of eight (8) additional discrete soil samples SS-R-16A-D and SS-R-17A-D at a depth between zero and one (1) foot below ground surface (bgs) to evaluate shallow soil conditions near the two buildings on the Site for potential lead impacts from current residential structures.

3.1 Health and Safety Plan

A site-specific health and safety plan was prepared, reviewed by onsite personnel, and kept onsite for the duration of the fieldwork.

3.2 Soil Sampling

A shallow soil sampling program was completed which was consistent with the protocol outlined in the State of California Department of Toxic Substances Control (DTSC) *Interim Guidance for Sampling Agricultural Properties (Third Revision)* dated August 7, 2008. For the shallow sampling program, the Site was grid into fifteen (15) separate sampling areas (SS-1 through SS-15) and analyzed for OCPs, arsenic, and lead.

At the time of the soil sampling, AEI observed the Site as agricultural land. Near-surface soil samples were collected by AEI at sixty-eight (68) locations throughout the Site, designated as SS-1A to -1D through SS-15A to -15D, and SS-R-16A to -16D through SS-R-17A to -17D. Samples SS-1A to -1D through SS-15A to -15D, were composited by the laboratory into four (4) four-point composite samples (SS-1 COMP through SS-15 COMP) for the analysis of OCPs. Samples SS-R-16A to -16D through SS-R-17A to -17D were collected for the discrete analysis of lead and arsenic. Soil samples SS-1A through SS-15A were also collected for the discrete analysis of arsenic and lead. The approximate sample locations are shown on Figure 3.

Prior to sampling, loose vegetation and soil was cleared from the ground surface at each sample location and a small hole was dug to a depth of approximately 1 foot with a shovel. A hand shovel was then used to scrape soil from the sides of the hole at a depth of between three and six inches

and transfer the soil to a clean, laboratory-supplied, 4-ounce glass jars. Upon collection, each sample was labeled with the project name, project number, and the sampling date and time. After labeling, each sample was placed into an insulated, chilled ice chest containing ice for transport to the analytical laboratory. Chain-of-custody documentation was completed and accompanied the soil samples to State of California-certified laboratory.

Upon completion of sample collection, the shallow holes were backfilled with excavated and surrounding surficial soils.

3.3 Equipment Decontamination and Investigation-Derived Waste

The hand sampling equipment was decontaminated prior to and/or after collecting each soil sample. The equipment was cleaned using a triple-rinse method, which consisted of an initial wash containing an Alconox detergent and water solution, followed by two (2) potable water rinses.

4.0 LABORATORY ANALYSES

The soil samples were transferred under appropriate chain-of-custody documentation to a State of California-certified analytical laboratory, McCampbell Analytical, Inc, of Pittsburg, California. A summary of the requested laboratory analyses is shown in the table below:

Table A – Laboratory Analysis Summary

Sample ID	Compositing Schedule	Analysis
SS-1A to -1D through SS-15A to -15D	4 to 1	OCPs by EPA Method 8081A
SS-R-16A to -16D through SS-R-17A to -17D	Discrete	Arsenic and Lead by EPA Method 6020
SS-1A through SS-15A	Discrete	Arsenic and Lead by EPA Method 6020

Laboratory analytical documentation is provided in Appendix A.

5.0 ANALYTICAL RESULTS

For the purpose of providing context to the data obtained during this investigation, analytical results are compared to available regulatory screening levels. The San Francisco Bay Regional Water Quality Control Boards (RWQCB) Environmental Screening Levels (ESLs) for Direct Contact were used for comparison values under a residential land use scenario for this investigation. The ESLs are considered to be conservative. Under most circumstances, and within the limitations described in the ESLs, the presence of a chemical in soil at concentrations below the corresponding ESL and soil criteria may be assumed to not pose a significant threat to human health and the environment.

The Arsenic comparison concentrations should be taken from Geochemical and Mineralogical Maps for the Conterminous United States by United States Geological Survey (USGS). It indicates background levels of arsenic in this particular location's soil to have a background upper limit of

8.4 milligrams per kilogram (mg/kg). Additional evaluation may be necessary at sites where a chemical is present at concentrations above the corresponding ESL and soil gas criteria.

Table 1 and 2 presents a summary of the soil sample analytical results, and laboratory analytical documentation is provided in Appendix B. The results can be summarized as follows:

- Chlordane (Technical), a-Chlordane, and g-Chlordane were detected in sample SS-2 COMP at concentrations of 0.16 mg/kg, 0.018 mg/kg, and 0.015 mg/kg respectively. The detected concentrations were below the residential and commercial ESLs of 0.48 mg/kg and 2.2 mg/kg, respectively.
- p,p-dichlorodiphenyldichloroethane (p,p-DDD) was detected in sample SS-14 COMP, at a concentration of 0.012 mg/kg. The detected concentration is below the residential and commercial ESL of 2.7 mg/kg and 12 mg/kg, respectively.
- p,p-dichlorodiphenyldichloroethylene (p,p-DDE) was detected in 13 of the 15 samples collected and analyzed, with the exception of SS-1 COMP and SS-7 COMP. p,p-DDE concentrations ranged from 0.0020 mg/kg to 0.075 mg/kg. The detected concentrations are below the residential and commercial ESL of 1.9 mg/kg and 8.1 mg/kg, respectively.
- p,p-dichlorodiphenyltrichloroethane (p,p-DDT) was detected in 12 of the 15 samples collected and analyzed, with the exception of SS-1 COMP, SS-4 COMP, and SS-7 COMP. p,p-DDT concentrations ranged from 0.0017 mg/kg to 0.019 mg/kg. The detected concentrations are below the residential and commercial ESL of 1.9 mg/kg and 8.1 mg/kg, respectively.
- Dieldrin was detected in samples SS-2 COMP, SS-5 COMP, and SS-15 COMP at concentrations of 0.0068 mg/kg, 0.0016 mg/kg, and 0.0038 mg/kg, respectively. The detected concentrations are below the residential and commercial ESL of 0.038 mg/kg and 0.14 mg/kg, respectively.
- The remaining OCPs were not detected at or below laboratory method reporting limits.
- Arsenic was detected in every sample collected and analyzed. Arsenic concentrations ranged from 0.91 mg/kg to 10 mg/kg. The detected arsenic concentrations were found to exceed direct contact residential ESLs of 0.067 mg/kg; however, the arsenic levels observed in samples collected from the Site are consistent with naturally occurring arsenic (6.0 – 8.4 mg/kg) as demonstrated by USGS' *Geochemical and Mineralogical Maps for the Conterminous United States* (Smith, 2014) for the Morgan Hill area.
- Lead was detected in all samples collected and analyzed. Lead concentrations ranged from 0.87 mg/kg to 200 mg/kg. Lead concentrations from SS-R-16A (120 mg/kg), SS-R-16D (170 mg/kg), and SS-R-17B (200 mg/kg) exceeded its applicable residential ESLs of 80 mg/kg and was below its commercial ESLs of 320 mg/kg.

6.0 SUMMARY AND CONCLUSIONS

AEI has completed a Limited Agricultural Investigation at the Site to evaluate the current subsurface conditions related to the historical agricultural site use. Near-surface soil samples were collected at sixty-eight (68) locations throughout the Site, designated as SS-1A-D through SS-15A-D, SS-R-16A-D and SS-R-17A-D. Samples SS-1A-D through SS-15A-D were composited by the laboratory into fifteen (15) four-point composite samples (S1-S15 COMP), for the analysis of OCPs. One sample from each composite (SS-1A through SS-15A) was set aside for discrete analysis of arsenic and lead. Samples SS-R-16A-D and SS-R-17A-D were analyzed for arsenic and lead.

No OCPs analyzed exceeded their corresponding ESLs for residential and commercial direct contact scenarios. In addition, arsenic was detected at concentrations ranging from 0.91 mg/kg to 10 mg/kg, which is consistent with typical background concentrations (6.0 – 8.4 mg/kg) for the Morgan Hill area. Lead was found in concentrations above its corresponding residential ESL in three samples SS-R-16A, SS-R-16D, and SS-R-17B. Each of the sample locations with lead concentrations above the residential ESL were collected in the vicinity of the former residence, which is typically associated with the use of lead paint. Additional characterization to delineate the extent of lead in soil is recommended along with limited remediation by source removal in the vicinity of the former residences. Additional analysis of Soluble Threshold Limit Concentration (STLC) is recommended for the soil samples with lead present for waste disposal requirements.

8.0 REPORT LIMITATIONS AND RELIANCE

This report presents a summary of work completed by AEI Consultants. The completed work includes observations and descriptions of site conditions encountered. Where appropriate, it includes analytical results for samples taken during the course of the work. The number and location of samples are chosen to provide the requested information, subject to scope of work for which AEI was retained and limitations inherent in this type of work, but it cannot be assumed that they are representative of areas not sampled. This report should not be regarded as a guarantee that no further contamination beyond that which could have been detected within the scope of this investigation is present beneath the subject property. Undocumented, unauthorized releases of hazardous material, the remains of which are not readily identifiable by visual inspection and are of different chemical constituents, are difficult and often impossible to detect within the scope of a chemical specific investigation.

Any conclusions and/or recommendations are based on these analyses and observations, and the governing regulations. Conclusions beyond those stated and reported herein should not be inferred from this document. These services were performed in accordance with generally accepted practices, in the environmental engineering and construction field, which existed at the time and location of the work. No other warranty, either expressed or implied, has been made.

This investigation was prepared for the sole use and benefit of Trumark Homes LLC. All reports, both verbal and written, whether in draft or final, are for the benefit of Trumark Homes

LLC. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns. Reliance is provided in accordance with AEI's Proposal and Standard Terms & Conditions executed by Trumark Homes LLC. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

If there are any questions regarding our investigation, please do not hesitate to contact AEI at 925-746-6000.

Sincerely,
AEI Consultants

MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate $250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.

* If metals are requested for water samples and the water type (Matrix) is not specified on the chain of custody, MAI will default to metals by E200.8.

Please provide an adequate volume of sample. If the volume is not sufficient for a MS/MSD a LCS/LCSD will be prepared in its place and noted in the report.

MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate $250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.

* If metals are requested for water samples and the water type (Matrix) is not specified on the chain of custody, MAI will default to metals by E200.8.

Please provide an adequate volume of sample. If the volume is not sufficient for a MS/MSD a LCS/LCSD will be prepared in its place and noted in the report.

Subject: PHASE I ENVIRONMENTAL SITE ASSESSMENT
1040-1045 Cochrane Road and 1065-1105 Half Road
Morgan Hill, California 95037
AEI Project No. 388872

Dear Rick Singer:

AEI Consultants is pleased to provide the *Phase I Environmental Site Assessment (Phase I ESA)* report of the above referenced property. This assessment was authorized and performed in accordance with the scope of services outlined in AEI's contract, the scope and limitations of ASTM Standard Practice E1527-13, and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).

We appreciate the opportunity to provide services to you. If you have any questions concerning this report, or if we may assist you in any other matter, please contact me at (408) 559-7600 or TGolino@aeiconsultants.com.

Sincerely,

Tory Golino
AEI Consultants

EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by Llagas, LLC. to conduct a Phase I ESA in conformance with AEI's contract and the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 1040-1045 Cochrane Road and 1065-1105 Half Road, Morgan Hill, Santa Clara County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

Pertinent subject property information is noted below:

PROPERTY INFORMATION	
Site Address(es)	1040-1045 Cochrane Road and 1065-1105 Half Road, Morgan Hill, Santa Clara County, California 95037
Property ID (APN or Block/Lot)	728-31-14 to -16 and 728-30-1 to -4, -6, and -9
Location	Bounded by Cochrane Road to the Northwest, De Paul Drive and Mission View Drive to the northeast, Half Road to the southeast, and Highway 101 to the southwest
Property Type	Agricultural
SITE AND BUILDING INFORMATION	
Approximate Site Acreage/Source	87.6/Santa Clara County
Number of Buildings	Two
Building Construction Date(s)	Circa 1974
Building Square Footage (SF)/Source	11,000/Estimate using Google Earth
Number of Floors/Stories	One
Basement or Subgrade Area(s)	None identified
Number of Units	Three
Additional Improvements	Gravel and dirt roads and an unfinished stormwater detention pond
On-site Occupant(s)	A tree farm (1040-1045 Cochrane Road) Cherry orchard (1065-1105 Half Road) Santa Clara Valley Water District Construction Staging (No address along Half Road) Hay cultivation (southern portion of the property)
Current On-site Operations/Use	Typical agricultural and residential activities, staging of dirt, gravel, and construction related equipment
Current Use of Hazardous Substances	Yes; refer to Section 7.1
REGULATORY INFORMATION	
Regulatory Database Listing(s)	None identified

A chronological summary of historical subject property information is as follows:

Date Range	Subject Property Description and Use (Historical Addresses)	Source(s)
Prior to 1939	Not found; Data failure; refer to Section 1.6.1	Aerial photographs, city directories, agency records, interviews

Date Range	Subject Property Description and Use (Historical Addresses)	Source(s)
1939-Present	Residences and agricultural use including orchards and row crops	Aerial photographs, city directories, agency records, interviews

The immediately surrounding properties consist of the following:

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
Northwest	Cochrane Road, followed by: Shopping Center (1031-1045 Cochrane Road) (1045 address not associated with the subject property)	EDR Hist Cleaner (1041 Cochrane Road)
North	Cochrane Road, followed by: Burger King (1039 Cochrane Road)	UST (1107 Cochrane Road - historical address)
Northeast	De Paul Road, followed by: De Paul Health Center/hospital (18500 De Paul Drive) Mission View Road, followed by: Residences (18201-18241 Tolusa Place) Orchard (1345 Half Road)	RCRA-SQG, FINDS, ECHO, HAZNET (18500 St. Louise Drive - historical address) CUPA Listings (four times), UST (18500 De Paul Drive) CUPA Listings (18511 Mission View Drive - additional address)
East	Half Road, followed by: Agricultural land and residence (1400 Half Road)	None identified
Southeast	Half Road, followed by: Agricultural land and a residence (APNs 728-29-001 and -018 and 17905 Condit Road)	None identified
Southwest	Santa Clara Valley Water District Canal, followed by Highway 101, followed by: Shoe Palace (755 Jarvis Drive) Commercial Building (685 Jarvis Drive) Commercial Building (675 Jarvis Drive) Extended Stay America (605 Jarvis Drive) Hobby Lobby (150 Cochrane Road) and vacant land	CUPA Listings, HAZNET (675 Jarvis Drive) CUPA Listings (685 Jarvis Drive)

If the surrounding properties are listed in the regulatory database, please refer to Section 5.1 for discussion.

FINDINGS

Recognized Environmental Condition (REC) is defined by the ASTM Standard Practice E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

- AEI did not identify evidence of RECs during the course of this assessment.

Controlled Recognized Environmental Condition (CREC) is defined by the ASTM Standard Practice

E1527-13 as a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

- AEI did not identify evidence of CRECs during the course of this assessment.

Historical Recognized Environmental Condition (HREC) is defined by the ASTM Standard Practice E1527-13 as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

- AEI did not identify evidence of HRECs during the course of this assessment.

Other Environmental Considerations (OEC) warrant discussion, but do not qualify as RECs as defined by the ASTM Standard Practice E1527-13. These include, but are not limited to, de minimis conditions and/or environmental considerations such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

- The subject property is currently and has historically been used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, used on site have impacted the subject property. However, based on the planned continued use of the subject property for agricultural production for the near future, no further investigation is likely warranted at this time. Soil sampling would be recommended prior to any redevelopment of the subject property.
- According to the Mr. Singer, demolition of the subject property buildings may be planned for the future. Regardless of building construction date, the EPA's NESHAP requires that a thorough asbestos survey be performed prior to demolition or renovation activities that may disturb ACMs. This requirement may be enforced by federal, state and local regulatory agencies, and specifies that all suspect ACMs be sampled to determine the presence or absence of asbestos prior to any renovation or demolition activities which may disturb them to prevent potential exposure to workers, building occupants, and the environment. Similarly, OSHA regulations require that specific work practices be implemented when handling construction materials and debris that contain asbestos and/or lead-containing materials.
- Due to the age of the subject property buildings, there is a potential that LBP is present. AEI understands that demolition activities may be planned. AEI recommends that the property owner consult with a certified Lead Risk Assessor to determine options for control of possible LBP hazards. Stringent local and State regulations may apply to LBP in association with building demolition/renovations and worker/occupant protection. It should be noted that construction activities that disturb materials or paints containing any amount of lead may be subject to certain requirements of the OSHA lead standard contained in 29 CFR 1910.1025 and 1926.62.

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) of 1040-1045 Cochrane Road and 1065-1105 Half Road, Morgan Hill, Santa Clara County, California, the *subject property*. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

AEI did not identify evidence of RECs or CRECs in connection with the subject property during the course of this assessment. AEI recommends no further investigation for the subject property at this time.

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I ESA performed in conformance with AEI's contract and scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 1040-1045 Cochrane Road and 1065-1105 Half Road, Morgan Hill, Santa Clara County, California (Appendix A: Figures and Appendix B: Property Photographs).

1.1 Scope of Work

The purpose of the Phase I ESA is to assist the client in identifying potential RECs, in accordance with ASTM E1527-13, associated with the presence of any hazardous substances or petroleum products, their use, storage, and disposal at and in the vicinity of the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal, and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

1.2 Additional Services

Other Environmental Considerations such as ACMs, LBP, lead in drinking water, radon, mold, and wetlands can result in business environmental risks for property owners which may disrupt current or planned operations or cash flow and are generally beyond the scope of a Phase I assessment as defined by ASTM E1527-13. Based upon the agreed-on scope of services this ESA did not include subsurface or other invasive assessments, business environmental risks, or other services not specifically identified and discussed herein.

1.3 Significant Assumptions

The following assumptions are made by AEI in this report. AEI relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow, unless otherwise specified by on-site well data or well data from the subject property or nearby sites, is inferred from contour information depicted on the USGS topographic maps. AEI assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.4 LIMITATIONS

Property conditions, as well as local, state, tribal, and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this assessment apply strictly to the environmental regulations and property conditions existing at the time the assessment was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the assessment.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: ACMs, radon, LBP, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-13.

If requested by the client, these non-scope issues are discussed herein. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under CERCLA. ASTM Standard Practice E1527-13 and the United States EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

1. 42 U.S.C. § 9601(35)(B), referenced in the ASTM Standard Practice E1527-13.
2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
3. 42 U.S.C. § 9601(40) and 42 U.S.C. § 9607(q).

The Phase I ESA is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, current subject property use, and observations and conditions that existed on the date and time of the property reconnaissance.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

AEI's limited radon screening, if included, is intended to provide a preliminary screening to evaluate the potential presence of elevated radon concentrations at the site. The proposed scope is not intended to define the full extent of the presence of radon at the subject property. As such, the results should be used for lending purposes only. The recommendations and conclusions presented as a result of the limited preliminary radon screening apply strictly to the property conditions existing at the time the sampling was performed. The sample analytical results are only valid for the time, place, and condition of the site at the time of collection and AEI does not warrant that the results will be repeatable or are representative of past or future conditions.

1.5 Limiting Conditions/Deviations

The performance of this Phase I ESA was limited by the following:

- While additional assessments may have been conducted on the subject property, these documents must be provided for AEI's review in order for the information to be summarized/included in this Phase I ESA. Please refer to Section 6.3 for a summary of previous reports and other documentation provided to AEI during this assessment.

- Due to the size of the subject property, AEI performed a reconnaissance of the property utilizing a field technique of traversing the site in an attempt to provide an overlapping field of view. Due to the size of the property and the vegetation present on site, isolated areas of the site may have not been accessible for direct observation during AEI's field reconnaissance. Based on information provided by the ownership and by agencies, this limitation is not expected to significantly alter the findings of this assessment.

- AEI did not access into the interiors of the residences, a garage, or temporary trailers on-site. Features may be present which were not observed by AEI. However, based on the nature, of use, this limitation is not expected to significantly alter the findings of this assessment.

1.6 Data Failure and Data Gaps

According to ASTM E1527-13, data gaps occur when the Environmental Professional is unable to obtain information required by the Standard, despite good faith efforts to gather such information. Pursuant to ASTM E1527-13, only significant data gaps, defined as those that affect the ability of the Environmental Professional to identify RECs, need to be documented.

Data failure is one type of data gap. According to ASTM E1527-13, data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Pursuant to ASTM E1527-13, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier, or periods of five years or greater.

1.6.1 DATA FAILURE

The following data failure was identified during the course of this assessment:

Data Failure	The earliest historical resource obtained during this assessment was an aerial photograph from 1939 indicating that the subject property was developed agriculturally. The lack of historical sources for the subject property dating back to first developed use represents historical data source failure. However, as it is assumed that the subject property would have been previously used for agricultural purposes, if not undeveloped, this data failure is not expected to significantly alter the findings of this assessment.
Information/Sources Consulted	City directories, Sanborn fire insurance maps, aerial photographs, agency records, interviews

1.6.2 DATA GAPS

AEI did not identify significant data gaps which affected our ability to identify RECs.

1.7 RELIANCE

All reports, both verbal and written, are for the benefit of Llagas, LLC.. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors, or assigns. Reliance is provided in accordance with AEI's contract and Standard Terms and Conditions executed by Llagas, LLC. on May 15, 2018. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

2.0 SITE AND VICINITY DESCRIPTION

2.1 SITE LOCATION AND DESCRIPTION

PROPERTY INFORMATION	
Site Address(es)	1040-1045 Cochrane Road and 1065-1105 Half Road, Morgan Hill, Santa Clara County, California 95037
Property ID (APN or Block/Lot)	728-31-14 to -16 and 728-30-1 to -4, -6, and -9
Location	Bounded by Cochrane Road to the Northwest, De Paul Drive and Mission View Drive to the northeast, Half Road to the southeast, and Highway 101 to the southwest
Property Type	Agricultural
SITE AND BUILDING INFORMATION	
Approximate Site Acreage/Source	87.6/Santa Clara County
Number of Buildings	Two
Building Construction Date(s)	Circa 1974
Building Square Footage (SF)/Source	11,000/Estimate using Google Earth
Number of Floors/Stories	One
Basement or Subgrade Area(s)	None identified
Number of Units	Three
Additional Improvements	Gravel and dirt roads and an unfinished stormwater detention pond
On-site Occupant(s)	A tree farm (1040-1045 Cochrane Road) Cherry orchard (1065-1105 Half Road) Santa Clara Valley Water District Construction Staging (No address along Half Road) Hay cultivation (southern portion of the property)
Current On-site Operations/Use	Typical agricultural and residential activities, staging of dirt, gravel, and construction related equipment
Current Use of Hazardous Substances	Yes; refer to Section 7.1
REGULATORY INFORMATION	
Regulatory Database Listing(s)	None identified

2.2 ON-SITE UTILITIES

Utility	Source/System Information
Heating System	Natural gas and electricity
Cooling System	N/A
Potable Water	Santa Clara Valley Water District
Sewage Disposal/Treatment	Septic

Utility source/system information listed in the table above is provided by Mr. Rick Singer, unless otherwise noted above.

2.3 SITE AND VICINITY CHARACTERISTICS

The subject property is located in a mixed commercial and residential area of Morgan Hill,

California. The immediately surrounding properties consist of the following:

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
Northwest	Cochrane Road, followed by: Shopping Center (1031-1045 Cochrane Road) (1045 address not associated with the subject property)	EDR Hist Cleaner (1041 Cochrane Road)
North	Cochrane Road, followed by: Burger King (1039 Cochrane Road)	UST (1107 Cochrane Road - historical address)
Northeast	De Paul Road, followed by: De Paul Health Center/hospital (18500 De Paul Drive) Mission View Road, followed by: Residences (18201-18241 Tolusa Place) Orchard (1345 Half Road)	RCRA-SQG, FINDS, ECHO, HAZNET (18500 St. Louise Drive - historical address) CUPA Listings (four times), UST (18500 De Paul Drive) CUPA Listings (18511 Mission View Drive - additional address)
East	Half Road, followed by: Agricultural land and residence (1400 Half Road)	None identified
Southeast	Half Road, followed by: Agricultural land and a residence (APNs 728-29-001 and -018 and 17905 Condit Road)	None identified
Southwest	Santa Clara Valley Water District Canal, followed by Highway 101, followed by: Shoe Palace (755 Jarvis Drive) Commercial Building (685 Jarvis Drive) Commercial Building (675 Jarvis Drive) Extended Stay America (605 Jarvis Drive) Hobby Lobby (150 Cochrane Road) and vacant land	CUPA Listings, HAZNET (675 Jarvis Drive) CUPA Listings (685 Jarvis Drive)

If the surrounding properties are listed in the regulatory database, please refer to Section 5.1 for discussion.

2.4 Physical Setting

Geologic Unit: Description/Source	Qa: Alluvial gravel, sand and clay of valleys, age Holocene/USGS and United States Department of the Interior
Soil Series: Description/Source	Primarily ArA: Arbuckle gravelly loam, a gravelly loam to at least 40 inches/USDA Soil Survey
Groundwater Flow Direction/Source	Southwest/Topographic map interpretation
Estimated Depth to Groundwater/ Source	156 feet bgs/Well data for a well located approximately 0.84 mile north of the subject property, obtain from the USGS national Water Information System
Surface waters on the subject property or adjacent sites	A Santa Clara Valley Water District canal is located adjacent to the southwest of the subject property

Note: Groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water

pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

3.0 HISTORICAL REVIEW OF SITE AND VICINITY

Reasonably ascertainable standard historical sources as outlined in ASTM Standard E1527-13 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historical city directories, Sanborn fire insurance maps, and agency records, is as follows:

Date Range	Subject Property Description and Use (Historical Addresses)	Source(s)
Prior to 1939	Not found; Data failure; refer to Section 1.6.1	Aerial photographs, city directories, agency records, interviews
1939-Present	Residences and agricultural use including orchards and row crops	Aerial photographs, city directories, agency records, interviews

The subject property is currently and has historically been used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, used on site have impacted the subject property. However, based on the planned continued use of the subject property for agricultural production for the near future, no further investigation is likely warranted at this time. Soil sampling would be recommended prior to any redevelopment of the subject property.

If available, copies of historical sources are provided in the report appendices.

3.1 AERIAL PHOTOGRAPHS

AEI reviewed aerial photographs of the subject property and surrounding area. A search was made of the EDR collection of aerial photographs. Aerial photographs were reviewed for the following years:

Year(s)	Subject Property Description	Adjacent Site Descriptions
1939 1940	Primarily orchard, with three residences on-site	NORTHWEST: A road, followed by orchards NORTH: A road, followed by agricultural land and orchards NORTHEAST: Orchards and a residence EAST: A road, followed by orchards SOUTHEAST: A road, followed by orchards SOUTHWEST: Orchards and a residence
1968	Primarily orchard, with two residences on-site	NORTHWEST: No significant changes NORTH: No significant changes NORTHEAST: No significant changes EAST: A road, followed by orchards and agricultural structures SOUTHEAST: No significant changes SOUTHWEST: No significant changes

Year(s)	Subject Property Description	Adjacent Site Descriptions
1974 1982	The two existing residences on-site as well as orchards and row crops. An area on the southern portion of the property is improved with small residences and/or agricultural structures	NORTHWEST: No significant changes NORTH: No significant changes NORTHEAST: No significant changes EAST: A road, followed by orchards and agricultural structures SOUTHEAST: No significant changes SOUTHWEST: The existing canal followed by the existing highway
1998	Property is mostly vacant land, with the two existing residences, a small orchard, and an unidentified improved area on the southern portion of the property	NORTHWEST: No significant changes NORTH: No significant changes NORTHEAST: A road, followed by the existing hospital and a road followed by agricultural land and orchards EAST: No significant changes SOUTHEAST: A road, followed by agricultural land and the existing residence SOUTHWEST: No significant changes
2006	The two existing residences, the existing tree farm, the existing orchard, and agricultural land (hay)	No significant changes
2009 2012	No significant changes	NORTHWEST: Cochrane Road, followed by the existing shopping center NORTH: Cochrane Road, followed by construction NORTHEAST: No significant changes EAST: No significant changes SOUTHEAST: No significant changes SOUTHWEST: No significant changes
2016	No significant changes	NORTHWEST: No significant changes NORTH: No significant changes NORTHEAST: The existing hospital, and Mission View Road, followed by the existing residences and an orchard EAST: No significant changes SOUTHEAST: No significant changes SOUTHWEST: No significant changes

Based on a review of aerials photographs, the subject property appears to have been developed for agricultural use since at least 1939. Please refer to Section 3.0 for additional information.

3.2 Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of the EDR collection of Sanborn Fire Insurance maps.

Sanborn map coverage was not available for the subject property.

3.3 City Directories

A search of historical city directories was conducted for the subject property utilizing EDR. No

potential tenants of concern were identified based on AEI's review of the historical city directories. Directories were reviewed in approximate five-year increments from 1975 to 2014. The first listing for the subject property appeared in 1992. Please refer to the appendices for a complete list of historical subject property tenants identified by EDR.

3.4 Historical Topographic Maps

Based on the quality of information obtained from other sources, historical topographic maps were not reviewed as a part of this assessment.

3.5 Chain of Title

Based on the quality of information obtained from other sources, a chain of title search was not performed as part of this assessment.

4.0 REGULATORY AGENCY RECORDS REVIEW

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous substance use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to AULs, defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested.

4.1 LOCAL ENVIRONMENTAL HEALTH DEPARTMENT AND/OR STATE ENVIRONMENTAL AGENCY

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Santa Clara County Consumer and Environmental Protection Agency (SCC CEP)	May 17, 2018	Email	Ms. Melissa Belloso	Response received, no records on file

4.2 FIRE DEPARTMENT

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Santa Clara County Fire Department (SCCFD)	May 17, 2018	Fax	Employee with Department	Referred to City of Morgan Hill
Morgan Hill Fire Department	May 17, 2018	Website	Ms. Angie Gonzalez	Records provided with Building Department Records, please refer to Section 4.3

4.3 Building Department

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Morgan Hill Building Department (MHBD)	May 17, 2018	Website	Ms. Angie Gonzalez	Response received, records discussed below

Records Summary - 1040 Cochrane Road

Year(s)	Owner/Applicant	Description of Permit and Building Use
1992	St. Louise Hospital	Freeway sign for hospital

Records Summary - 1065 Half Road

Year(s)	Owner/Applicant	Description of Permit and Building Use
1993	Dave Gonzalez	Hand written note about "clean up" of property
1995	Mel Barberi	Demolish house and garage

Records Summary - 1085 Half Road

Year(s)	Owner/Applicant	Description of Permit and Building Use
1975	Illegible	Mostly illegible, something to do with a pump

Records Summary - 1105 Half Road

Year(s)	Owner/Applicant	Description of Permit and Building Use
2016	Llagas LLC	Replacement of meter base for agricultural pump

Records were provided to AEI for the address 1045 Cochrane Road. However, all of these records appear to be associated with the adjacent shopping center which also uses this address.

Evidence indicating current or prior use or storage of hazardous substances was not on file for the subject property with the MHBD.

4.4 Planning Department

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Morgan Hill Planning Department (MHPD)	May 17, 2018	Telephone	Employee with the planning department	No evidence indicating the existence of AULs on file for the subject property

4.5 Assessor's Office

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Santa Clara County Assessor's Office	May 17, 2018	Website	N/A	Information obtained is discussed below

Records Summary

APN	728-31-14 to -16 and 728-30-1 to -4, -6, and -9
Acreage	87.6 acres

Construction Date	Not provided
Building Square Footage	Not provided
Current Owner	Not provided
Additional Information	No additional information provided

4.6 Other Agencies Searched

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
CA State Water Resources Control Board (SWRCB) Geotracker	May 17, 2018	Website	N/A	Response received, records discussed below
CA Department of Toxic Substances Control (DTSC) Hazardous Waste Tracking System (HWTS)	May 17, 2018	Website	N/A	Online database searched, no records on file
CA DTSC Envirostor	May 17, 2018	Website	N/A	Online database searched, no records on file
Bay Area Air Quality Management District	May 17, 2018	Website	Ms. Rochelle Reed	Online database searched, no records on file

According to the Regional Water Control Board Irrigated Lands Regulatory Program (ILRP) and GeoTracker, the subject property is part of the ILRP, as well as some of the adjoining sites. The ILRP was initiated in 2003 to prevent agricultural runoff from impairing surface waters, and in 2012, groundwater regulations were added to the program. Waste discharge requirements (also known as "WDRs" or "Orders"), which protect both surface water and groundwater, address irrigated agricultural discharges throughout the Central Valley.

The subject property was listed as "George Chiala Farms, Inc. - Tuscany" and the program status is listed as "terminated".

Based on the nature of the program, the status of the subject property program listing, and current use of the subject property and adjacent properties listed as agricultural land, the subject property former enrollment in the ILRP is not expected to represent a significant environmental concern.

4.7 Oil and Gas Wells

Agency	Date Referenced	Resource	Oil or gas wells located within 500 feet of the subject property
California Division of Oil, Gas, and Geothermal Resources (CA DOGGR)	June 5, 2018	CA DOGGR Map	No

4.8 Oil and Gas Pipelines

Agency	Date Referenced	Resource	Pipelines located within 500 feet of the subject property
National Pipeline Mapping System (NPMS)	June 5, 2018	NPMS Public Map Viewer	Information obtained is discussed below

According to information obtained from the NPMS Public Map Viewer, a subterranean natural gas pipeline is located along Cochrane Road; see map in appendices. The pipeline, identified as a natural gas pipeline, is operated by Pacific Gas and Electric. No stressed vegetation or olfactory indications of a release were observed in the vicinity of the pipeline and no records of past releases or violations associated with this pipeline were identified within the regulatory database. Due to its contents, the natural gas pipeline is not expected to represent a potential threat to soil or groundwater conditions at the subject property. Based on this information, the pipeline does not appear to represent a significant environmental concern to the subject property at this time.

4.9 State Environmental Superliens

In accordance with our approved scope of services, AEI did not assess whether the subject property is subject to any state environmental superliens.

4.10 State Property Transfer Laws

In accordance with our approved scope of services, AEI did not assess whether the subject property is subject to any state property transfer laws.

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted EDR to conduct a search of publicly available information from federal, state, tribal, and local databases containing known and suspected sites of environmental contamination and sites of potential environmental significance. Data gathered during the current regulatory database search is compiled by EDR into one regulatory database report. Location information for listed sites is designated using geocoded information provided by federal, state, or local agencies and commonly used mapping databases with the exception of "Orphan" sites. Due to poor or inadequate address information, Orphan sites are identified but not geocoded/mapped by EDR, rather, information is provided based upon vicinity zip codes, city name, and state. The number of listed sites identified within the approximate minimum search distance from the federal and state environmental records database listings specified in ASTM Standard E1527-13 is summarized in Section 5.1, along with the total number of Orphan sites. A copy of the regulatory database report, which includes detailed descriptions of the databases noted below, is included in Appendix C of this report.

In determining if a listed site is a potential environmental concern to the subject property, AEI generally applies the following criteria to classify the site as lower potential environmental concern: 1) the site only holds an operating permit (which does not imply a release), 2) the site's distance from, and/or topographic position relative to, the subject property, and/or 3) the site has recently been granted "No Further Action" by the appropriate regulatory agency.

5.1 RECORDS SUMMARY

Database	Search Distance (Miles)	Subject Property Listed	Listings Within Search Distance	Listings Determined To Warrant Additional Discussion Below
NPL	1.0	No	0	0

Database	Search Distance (Miles)	Subject Property Listed	Listings Within Search Distance	Listings Determined To Warrant Additional Discussion Below
ADDITIONAL ENVIRONMENTAL RECORD SOURCES	SP/ADJ	No	11	11

Facility Name	St Louise Hospital, Unimed Management Svcs San Jose Inc., De Paul Health Center, De Paul Medical center
Address	18500 St. Louise Drive, 18500 De Paul Drive, 18511 Mission View Drive
Distance & Direction	Adjacent to the northeast beyond De Paul Drive
Hydrologic Position	Up-gradient
Databases Listed	RCRA-SQG, FINDS, ECHO, HAZNET (18500 St. Louise Drive) CUPA Listings (four times), UST (18500 De Paul Drive) CUPA Listings (18511 Mission View Drive)
Comments	The adjacent hospital to the northeast was identified in the regulatory database for generating small quantities of hazardous waste on-site. No violations related to these wastes were listed in the regulatory database. In addition, the site was listed for having a UST on-site permitted with Santa Clara County. The size, contents, and age of the UST was not provided. However, based on the lack of a documented release and the lack of violations listed, the review of regulatory agency records was not deemed necessary and these listings are not expected to represent a significant environmental concern. This property is listed as a HAZNET, FINDS and ECHO site in association with the above RCRA listing. No violations or enforcement actions were identified on the EPA websites Envirofacts and ECHO. Based on the nature of this listing and lack of violations, it is not expected to represent a significant environmental concern.

Facility Name	Cochrane 76
Address	1107 Cochrane Road
Distance & Direction	Adjacent to the north beyond Cochrane Road
Hydrologic Position	Cross-gradient
Databases Listed	UST
Comments	The adjacent site to the north, which is now occupied by a fast food restaurant (1039 Cochrane Road), appears to have been historically associated with the address 1107 Cochrane Road. This address was listed for a UST permitted with Santa Clara County under the name Cochrane 76. The size, contents, and age of the UST was not provided. However, based on the lack of a documented release, the review of regulatory agency records was not deemed necessary and this listing is not expected to represent a significant environmental concern.

Facility Name	Green Cleaners
Address	1041 Cochrane Road

Distance & Direction	Adjacent to the northwest beyond Cochrane Road, in the shopping center
Hydrologic Position	Cross-gradient
Databases Listed	EDR Hist Cleaner
Comments	A unit in the adjacent shopping center to the northwest was listed in the regulatory database as Green Cleaners, from 2008 to 2014. However, no documented generation of hazardous waste associated with this dry cleaner was identified in the regulatory database. Based on the relatively short duration of occupancy, the occupancy time period under regulatory oversight, the lack of associated hazardous waste generation, the lack of a documented release, and the inferred direction of groundwater flow, the review of regulatory agency records was not deemed necessary and this listing is not expected to represent a significant environmental concern.

Facility Name	Smart Products Inc
Address	675 Jarvis Avenue
Distance & Direction	Adjacent to the southwestwest beyond the canal and Highway 101
Hydrologic Position	Down-gradient
Databases Listed	CUPA Listings, HAZNET
Comments	This adjacent site was listed in the regulatory database for generating waste oil and storage of hazardous substances. Based on the lack of a documented release, the inferred direction of groundwater flow, and the relative distance from the subject property, the review of regulatory agency records was not deemed necessary and this listing is not expected to represent a significant environmental concern.

Facility Name	USI Manufacturing services Inc.
Address	685 Jarvis Drive A
Distance & Direction	Adjacent to the southwestwest beyond the canal and Highway 101
Hydrologic Position	Down-gradient
Databases Listed	CUPA Listings
Comments	This adjacent site was listed in the regulatory database for generating hazardous wastes on-site. Based on the lack of a documented release, the lack of additional listings, the inferred direction of groundwater flow, and the relative distance from the subject property, the review of regulatory agency records was not deemed necessary and this listing is not expected to represent a significant environmental concern.

Facility Name	No name listed
Address	101 Cochrane Road and 101 at Cochrane Road
Distance & Direction	Presumed to be nearby or adjacent to the northwest
Hydrologic Position	Cross-gradient
Databases Listed	CHMIRS, ERNS

Comments	According to information in the regulatory database, on March 25, 2014, a caller complained that an employee from a nearby restaurant was dumping cooking grease into a storm drain near the restaurant (Sitar Indian Cuisine). It does not appear that any additional investigation was required. Based on the nature of the incident and the location of the incident off-site, the review of regulatory agency records was not deemed necessary and these listings are not expected to represent a significant environmental concern.

5.2 VAPOR MIGRATION

AEI reviewed reasonably ascertainable information for the subject and nearby properties, including a regulatory database, files for nearby release sites, and/or historical documentation, to determine if potential vapor-phase migration concerns may be present which could impact the subject property.

Based on a review of available resources as documented in this report, AEI did not identify significant on-site concerns and/or regulated listings from nearby sites which suggest that a vapor-phase migration concern currently exists at the subject property.

6.0 INTERVIEWS AND USER PROVIDED INFORMATION

6.1 INTERVIEWS

Pursuant to ASTM E1527-13, the following interviews were performed during this assessment in order to obtain information indicating RECs in connection with the subject property.

6.1.1 OWNER AND KEY SITE MANAGER

Relation to Property	Name	Date Interviewed	Method of Contact	Year First Associated w/ Property	Notes
Owner Representative	Mr. Rick Singer	June 4, 2018	In Person	1999	Interviewed; see Interview Summary table below
Key Site Manager	Ms. Laura Phelps	June 4, 2018	In Person	Unknown	Interviewed; see Interview Summary table below

Interview Summary

Question	Owner (Representative) Response/ Comment	Key Site Manager Response/ Comment
Do you have any knowledge of USTs, clarifiers or oil/water separators, sumps, or other subsurface features?	No	No
Do you have any knowledge of previous environmental investigations conducted on site?	No	No
Do you have any knowledge of current or past industrial operations and/or other operations which would involve the use of hazardous substances and/or petroleum products?	No	No
Are you aware of any known plans for site redevelopment or change in site use?	No	No
Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?	No	No
Are you aware of any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property?	No	No
Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?	No	No
Are you aware of any incidents of flooding, leaks, or other water intrusion, and/or complaints related to indoor air quality?	No	No

Question	Owner (Representative) Response/ Comment	Key Site Manager Response/ Comment
Additional information provided:	Mr. Singer explained that future redevelopment of the property is being considered, but no plans are underway and the property will stay as is for the near future.	N/A

6.1.2 Past Owners, Operators, and Occupants

AEI did not attempt to interview past owners, operators, and occupants of the subject property because information from these sources would likely be duplicative of information already obtained from other sources.

6.1.3 Interview with Others

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this section.

6.2 User Provided Information

User provided information is intended to help identify the possibility of RECs in connection with the subject property. According to ASTM E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), certain items should be researched by the prospective landowner or grantee, and the results of such inquiries may be provided to the Environmental Professional. The responsibility for qualifying for LLPs by conducting the inquiries ultimately rests with the User, and providing the information to the Environmental Professional would be prudent if such information is available.

The User Questionnaire was completed by Mr. Rick Singer, representative of the ownership. The following table represents information contained therein.

Question	Response/ Comment
1. Environmental liens that are filed or recorded against the property (40 CFR 312.25) Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?	No
2. Activity and use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and vi)). Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?	No

Question	Response / Comment
3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28). Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	No
4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29). Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	Yes
5. Commonly known or reasonably ascertainable information about the property (40 CFR 312.30). Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example: (a) Do you know the past uses of the property? (b) Do you know of specific chemicals that are present or once were present at the property? (c) Do you know of spills or other chemical releases that have taken place at the property? (d) Do you know of any environmental cleanups that have taken place at the property?	Yes
6. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31). Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?	No

6.3 Previous Reports and Other Provided Documentation

No prior reports or other relevant documentation in association with the subject property was made available to AEI during the course of this assessment.

6.4 Environmental Lien Search

In accordance with our approved scope of services, an environmental lien search was not performed as part of this assessment.

7.0 SITE RECONNAISSANCE

Site Reconnaissance Date	June 4, 2018
AEI Site Assessor(s)	Elizabeth Scudero
Property Escort(s)/ Relationship(s) to Property	Mr. Rick Singer/Owner Representative Ms. Laura Phelps/Key Site Manager
Units/Areas Observed	AEI was granted access to exterior areas of the property
Area(s) not accessed and reason(s)	Interiors of residences were not accessed. Refer to Section 1.5 for discussion of limiting conditions.
Other Physical Constraints	None

Reconnaissance Findings Summary

Feature	Observed on Subject Property (see Section 7.1)	Observed on Adjacent Property (see Section 7.2)
Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use	✔	
Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)		
Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use		
Unidentified Substance Containers		
Electrical or Mechanical Equipment Likely to Contain Fluids		✔
Interior Stains or Corrosion		
Strong, Pungent, or Noxious Odors		
Pools of Liquid		
Drains, Sumps, and Clarifiers		
Pits, Ponds, and Lagoons	✔	
Stained Soil or Pavement	✔	
Stressed Vegetation		
Solid Waste Disposal or Evidence of Fill Materials		
Waste Water Discharges		
Wells	✔	
Septic Systems	✔	
Biomedical Wastes		
Other	✔	

7.1 SUBJECT PROPERTY RECONNAISSANCE FINDINGS

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

7.1.1 Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use

Substance/Waste (size/quantity)	Location	Operations Associated with Material	Disposal Method/ Frequency	Secondary Containment	Staining/ Spills
Propane	Shed on northwest side of property	Unknown	N/A	No	No
WD-40, small containers of maintenance related materials	Shed on northwest side of property	Presumed maintenance related activities	N/A	No	No

AEI observed a small container of propane, WD-40, and other similar maintenance related materials in a storage shed on the northwestern side of the property. No staining associated with these substances was observed. Based on the very small quantities and lack of staining, these substances are not expected to represent a significant environmental concern.

7.1.2 Pits, Ponds, and Lagoons

A stormwater detention pond was observed on the western side of the property. According to Mr. Singer, the owners speculate that the detention pond and associated drain system may have been a project started by the adjacent hospital and the Santa Clara Valley Water District. Mr. Singer speculates that the water project was never completed and the owners have never seen water collect in this area. Based on this information, the detention pond is not expected to represent a significant environmental concern.

7.1.3 Stained Soil and Pavement

An oily stain approximately 4 feet by 4 feet in size was observed on dirt and gravel in a staging area on the northwestern side of the property. The stain appeared to be from parking large equipment used in connection with the tree farm. The stain also appeared to be surficial in nature. Based on the small size and the surficial nature of the staining, it is not expected to represent a significant environmental concern.

7.1.4 Wells

AEI observed three irrigation wells on the subject property. The date of installation and depth of the wells was not provided to AEI. According to Mr. Singer, none of the wells are used for drinking water, and the one occupied residence on the northwestern portion of the property is connected to the municipal water system. No water quality testing results were provided to AEI for review. Based on the nature of use of the wells, the presence of the wells is not expected to represent a significant environmental concern.

7.1.5 Septic Systems

According to Mr. Singer and Ms. Phelps, there are two septic systems located on-site, one for each residence. The septic systems are used for the treatment and disposal of domestic

waste. The exact location of the septic systems was not provided to AEI, and AEI did not observed any features pointing to the location of the septic tanks while on-site. Based on the use of the systems solely for domestic waste, and since no hazardous substances or petroleum products are utilized on site in the residences, the presence of this septic systems is not expected to represent a significant environmental concern.

7.1.6 Other

A wood-lined hole in the ground was observed near the residence on the northwestern side of the subject property. The hole was observed because the cover appeared to have been broken, and the exact size of the feature could not be ascertained. The on-site occupant was interviewed, and he said he was not aware of the use of the feature, but he had checked and nothing was stored or located there. Based on these observations, this feature is not expected to represent a significant environmental concern.

According to an employee on-site, no fertilizers or pesticides are stored on-site. Any fertilizers used in agricultural practices on-site are brought from an off-site storage location. Please refer to Section 3.0 for discussion of current and former agricultural use.

7.2 Adjacent Property Reconnaissance Findings

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

7.2.1 Electrical or Mechanical Equipment Likely to Contain Fluids

Toxic PCBs were commonly used historically in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors. According to United States EPA regulation 40 CFR, Part 761, there are three categories for classifying such equipment: <50 ppm of PCBs is considered "Non-PCB"; between 50 and 500 ppm is considered "PCB-Contaminated"; and >500 ppm is considered "PCB-Containing". Pursuant to 15 U.S.C. 2605(e)(2)(A), the manufacture, process, or distribution in commerce or use of any polychlorinated biphenyl in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

Transformers

The management of potential PCB-containing transformers is the responsibility of the local utility or the transformer owner. Actual material samples need to be collected to determine if transformers are PCB-containing.

Several pole-mounted and pad-mounted transformers were observed on the adjacent sites during the site reconnaissance. No spills, staining, or leaks were observed on or around the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

8.0 NON-ASTM SERVICES

8.1 Asbestos-Containing Building Materials

Asbestos is the name for a group of naturally occurring silicate minerals that can be separated into fibers. The fibers are strong, durable, and resistant to heat and fire. They are also long, thin and flexible, so they can even be woven into cloth. Because of these qualities, asbestos has been used in thousands of consumer, industrial, maritime, automotive, scientific and building products. During the 20th century, some 30 million tons of asbestos have been used in industrial sites, homes, schools, shipyards and commercial buildings in the United States. Commercial use of ACM began in the early 1900's and peaked in the period between 1940 and into the 1970's. Common ACMs include pipe-covering, insulating cement, insulating block, refactory and boiler insulation materials, transite board, fireproofing spray, joint compound, vinyl floor tile, ceiling tile, mastics, roofing products, and duct insulation for HVAC applications. Inhalation of asbestos fibers can result in deleterious health effects.

The potential for ACM was evaluated based the USEPA Guidance Document: Managing Asbestos in Place - A Building Owner's Guide to Operations and Maintenance Programs for Asbestos-Containing Materials (the Green Book). In 1973 the NESHAPS banned the use of most spray-applied surfacing ACM, specifically asbestos containing spray-on fireproofing and insulation. Subsequent revisions to this regulation in 1975 and 1978 effectively eliminated the use of friable pre-molded pipe, boiler, turbine, and duct insulation; and the spray application of friable asbestos-containing materials for all uses in buildings. In 1989 the EPA issued regulations to ban some asbestos-containing products and phase out most others over a multi-year period. The "Ban and Phase-Down" rule was challenged in court and the regulation remanded to the agency. As a result, any asbestos-containing products then "in commerce" would not be banned. Those not in commerce would be banned. Those materials "banned" could not be sold. It did not affect such materials already installed, or in use. Most US firms voluntarily ceased production of asbestos containing building materials not covered by the aforementioned Federal bans by the mid-1980's. In 1994, the OSHA determined that employers and building owners are required to treat installed thermal system installation and sprayed on and troweled-on surfacing materials, as well as vinyl or asphalt flooring material, as ACM in buildings constructed no later than 1980 until tested by laboratory analysis to prove otherwise.

The information below is for general informational purposes only and does not constitute an asbestos survey. In addition, the information is not intended to comply with federal, state or local regulations in regards to ACM.

Due to the age of the subject property buildings, there is a potential that ACMs are present. A limited list of typical suspect ACMs is included in the following table:

Material Type	Location
Plaster (acoustical and smooth)	Walls and ceilings
Ceiling tile	Ceiling systems
Thermal systems insulations, packings, and gaskets	Heating systems, cooling systems, domestic and heating and cooling piping, ductwork, and other equipment
Floor tile and associate mastics, flooring felts, and papers (under hardwood/other)	Floors
Vinyl sheet flooring and adhesives	Floors
Cove base and associated mastics	Walls
Ceramic tile adhesives and grouts	Walls, floors, and ceilings
All adhesives	Mirrors, wall coverings, construction, etc.
Grout and caulking	Windows and doors
Gypsum board, tape, and joint compound	Wall and ceiling systems
Insulation materials	Walls, ceilings, and attic spaces
Roofing materials (felts, rolled, shingle, flashings, adhesives, tar, and insulations)	Roof and parapet wall systems
Brick and block, mortars	Walls

According to Mr. Singer, demolition of the subject property buildings may be planned for the near future. Regardless of building construction date, the EPA's NESHAP requires that a thorough asbestos survey be performed prior to demolition or renovation activities that may disturb ACMs. This requirement may be enforced by federal, state and local regulatory agencies, and specifies that all suspect ACMs be sampled to determine the presence or absence of asbestos prior to any renovation or demolition activities which may disturb them to prevent potential exposure to workers, building occupants, and the environment. Similarly, OSHA regulations require that specific work practices be implemented when handling construction materials and debris that contain asbestos and/or lead-containing materials.

8.2 Lead-Based Paint

LBP is defined as any paint, varnish, stain, or other applied coating that has ≥1 mg/cm² (5,000 µg/g or 5,000 ppm) or more of lead by federal guidelines; state and local definitions may differ from the federal definitions in amounts ranging from 0.5 mg/cm² to 2.0 mg/cm². Section 1017 of the Housing and Urban Development (HUD) Guidelines, Residential Lead-Based Paint Hazard Reduction Act of 1992, otherwise known as "Title X", defines a LBP hazard as "any condition that causes exposure to lead that would result in adverse human health effects" resulting from lead-contaminated dust, bare, lead-contaminated soil, and/or lead-contaminated paint that is deteriorated or present on accessible, friction, or impact surfaces. Therefore, under Title X, intact LBP on most walls and ceilings would not be considered a "hazard", although the paint should be maintained and its condition monitored to ensure that it does not deteriorate and become a hazard. Additionally, Section 1018 of this law directed HUD and EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978. Most private housing, public housing, or federally owned or subsidized housing is affected by this rule.

Under OSHA, LCP is defined as any paint with any detectable amount of lead present in it. Therefore, all LBP is considered LCP. Conversely, LCP may not meet the criteria to be considered LBP in accordance with HUD guidelines or some states' definition of LBP.

It is important to note that LCP may create a lead hazard when being removed. The condition of these materials must be monitored when they are being disturbed. In the event LCP is subject to abrading, sanding, torching, and/or cutting during demolition or renovation activities, there may be regulatory issues that must be addressed.

The information below is for general informational purposes only and does not constitute a lead hazard evaluation. In addition, the information is not intended to comply with federal, state, or local regulations in regards to LBP.

In buildings constructed after 1978, it is unlikely that LBP is present; however, some paints utilized after 1978 will be LCP under OSHA. Structures built prior to 1978 and especially prior to the 1960s should be expected to contain LBP.

Due to the age of the subject property buildings, there is a potential that LBP is present. AEI understands that demolition activities of the subject property buildings may be planned for the near future. AEI recommends that the property owner consult with a certified Lead Risk Assessor to determine options for control of possible LBP hazards. Stringent local and State regulations may apply to LBP in association with building demolition/renovations and worker/ occupant protection. It should be noted that construction activities that disturb materials or paints containing any amount of lead may be subject to certain requirements of the OSHA lead standard contained in 29 CFR 1910.1025 and 1926.62.

8.3 Radon

Radon is a naturally-occurring, odorless, and invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.

The United States EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three radon zones, with Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the EPA Action Limit of 4.0 pCi/L. It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the EPA recommends site specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not requested as part of this assessment. According to the US EPA, the radon zone level for the area is Zone 2, which has a predicted average indoor screening level between 2 pCi/L and 4 pCi/L, equal to or below the action level of 4 pCi/L set forth by the US EPA.

8.4 Mold / Indoor Air Quality Issues

AEI was not granted access to the interior of the subject property buildings. Consequently, mold was not addressed as part of this assessment.

9.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
GMP METAL PLATING, I	740 JARVIS DRIVE	SW 1/8 - 1/4 (0.222 mi.)	F22	22

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk

characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/30/2018 has revealed that there are 8 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 3 UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CUPA Listings list, as provided by EDR, has revealed that there are 14 CUPA Listings

sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

FINDS:

Registry ID: 110002804289

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

WDS:

Facility ID:	Central Coastal 43I018777
Facility Type:	Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number:	CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion:	3
Facility Telephone:	4087823484

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Property Description:	The Site is located at the northeastern corner of the intersection of Peet Road and Mission Avenida in Morgan Hill, California, in the County of Santa Clara. The site was used for agricultural purposes from prior to 1939 until sometime between 1998 and 2005. The site also had three existing and former structures of such an age that building maintenance may have introduced pesticides and/or metals to shallow soil. Recent investigations indicated concentrations of organochlorine pesticide in soil that exceed health risk-based screening levels. The site was previously owned by Mr. Stanly Borello for over 50 years.

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	08/13/1996
Comments:	Completed Site Screening. A variety of chemicals were present in non-hazardous levels (>TTLC) : arsenic to 91 ppm, chromium to 62 ppm, lead to 480 ppm, zinc to 190 ppm, and extractable hydrocarbons (motor oil) to 45,000 ppm. Pesticides including DDT and dieldrin are present below soluble limits. The former farm vacant, a large garbage pile, and auto painting wastes were reported on site. The buyer wants the seller to get a signoff from the City who in turn, referred the site to DTSC.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

TENCATE ADVANCE COMPOSITES (Continued) **1001959809**

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 13006

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 3646

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs): 35

Waste code: D004
Waste name: ARSENIC
Amount (Lbs): 406

Waste code: D008
Waste name: LEAD
Amount (Lbs): 406

Waste code: D035
Waste name: METHYL ETHYL KETONE
Amount (Lbs): 3716

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 11185

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 800

Waste code: U112

TENCATE ADVANCE COMPOSITES (Continued) **1001959809**

TENCATE ADVANCE COMPOSITES (Continued) **1001959809**

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

THE ESTATES AT SAN SEBASTIAN - PHASE I (Continued) **S118353730**

Comments:	Request for Agency Oversight Application
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	03/04/2016
Comments:	DTSC reviewed a Phase I Environmental Site Assessment and risk evaluation reports prepared for the site. Dieldrin from past agricultural use was detected in soil samples collected from across the site and was identified as the primary chemical of potential concern. However, based on the risk evaluation it was concluded that the presence of dieldrin in soil does not pose a human health risk for future residential receptors. Soil was removed at two sampling locations where chlordane was detected at concentrations of 1,110 and 4,800 micrograms per kilogram. Arsenic was detected in soil at concentrations consistent with naturally-occurring background concentrations in Santa Clara County. DTSC concluded that no further action is required at the Site and that the planned residential development is acceptable.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Completed Info:
Completed Area Name: Altimira Residential Parcels
Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Responsible Agency Review
Completed Date: 08/17/2017
Comments: DTSC filed a California Environmental Quality Act (CEQA) Notice of Determination with the State Clearinghouse after the Final Removal Action Workplan was approved on August 17, 2017. DTSC relied on the City of Morgan Hill's Initial Study/Mitigated Negative Declaration and Addendum for the Lupine Annexation and Rezone Project to comply with CEQA.

Completed Area Name: Altimira Residential Parcels
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 02/03/2017
Comments: Voluntary Cleanup Agreement between Lupine Investors, LLC and DTSC to oversee the cleanup at the site

Completed Area Name: Borello Property
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 09/24/2004
Comments: Voluntary Cleanup Agreement (VCA) signed.

Completed Area Name: Altimira Residential Parcels
Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 11/03/2017
Comments: DTSC certified that all removal actions have been satisfactorily completed in accordance with the Removal Action Workplan approved by DTSC on August 17, 2017.

Completed Area Name: Altimira Residential Parcels
Completed Sub Area Name: Not reported
Completed Document Type: Community Profile
Completed Date: 06/08/2017
Comments: The community profile summarizes the responses to the community survey conducted by DTSC, includes demographic information regarding the surrounding community, and identifies recommended public participation activities.

Completed Area Name: Altimira Residential Parcels
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 08/17/2017
Comments: The Final Removal Action Workplan (RAW) identifies excavation of an

BORELLO PROPERTY (Continued) **S106568334**

estimated 6,500 cubic yards of pesticide-impacted soil and off-site disposal at a permitted landfill as the remedy for the Site. Modifications were made in the Final RAW in response to comments on the Draft RAW that were received during the public comment period; the Responsiveness Summary that is included as Appendix E provides responses to the comments and identifies where the modifications were made in the Final RAW.

Completed Area Name: Altimira Residential Parcels
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 06/14/2017
Comments: The Community Update announces the public comment period for the Draft Removal Action Workplan, discusses the Site history and environmental investigations, and summarizes the proposed cleanup actions. The Community Update was mailed to the neighboring community at the beginning of the public comment period.

Completed Area Name: Altimira Residential Parcels
Completed Sub Area Name: Not reported
Completed Document Type: Public Notice
Completed Date: 06/13/2017
Comments: The Public Notice serves as the official notice of the beginning of the public comment period for the Draft Removal Action Workplan and was placed in the Morgan Hill Times on 6/23/2017.

Completed Area Name: Altimira Residential Parcels
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 10/02/2017
Comments: Removal Action Workplan implementation was completed with the final round of confirmation sampling that was performed on 10/2/2017.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 08/18/2017
Comments: Not reported

Completed Area Name: Altimira Residential Parcels
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 11/02/2017
Comments: Not reported

Completed Area Name: Altimira Residential Parcels
Completed Sub Area Name: Not reported
Completed Document Type: Pre-HARP Form
Completed Date: 08/29/2017
Comments: Pre-HARP to oversee soil excavation completed.

Completed Area Name: Borello Property
Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 10/07/2005
Comments: Site certified as remediated for residential development.

BORELLO PROPERTY (Continued) **S106568334**

Completed Area Name: Borello Property
Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Notice of Exemption
Completed Date: 06/30/2005
Comments: NOE

Completed Area Name: Borello Property
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 10/07/2005
Comments: Approved report documenting the in-situ treatment of the pesticide contaminated soils.

Completed Area Name: Borello Property
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 06/30/2005
Comments: Removal Action Workplan approved which identifies bio-remediaton as the preferred cleanup method. Through the addition of Factor and fertilizers, the population of soil bacteria will grow and consume the residual pesticides as a source of food. When the remediation of the soil is complete, the bacterial populations will return back to normal levels. Residential cleanup levels are expected to be achieved within 6 months.

Completed Area Name: Borello Property
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 05/01/2005
Comments: Not reported

Completed Area Name: Borello Property
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 04/28/2004
Comments: Report detailing shallow soil sampling. This report was provided as background. No DTSc approval letter exists.

Completed Area Name: Borello Property
Completed Sub Area Name: Not reported
Completed Document Type: Community Profile
Completed Date: 04/01/2005
Comments: Community Profile report

Completed Area Name: Borello Property
Completed Sub Area Name: Not reported
Completed Document Type: Pilot Study/Treatability Workplan
Completed Date: 06/15/2004
Comments: Pilot study workplan to evaluate the effectiveness of the bio-remediating toxaphene impacted soils.

Completed Area Name: Borello Property
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 11/30/2004
Comments: Results of the pilot study. Bio-remediation factor appears to work.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/11/2017

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/11/2017

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 02/22/2018

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board?s review found that more than one-third of the region?s active disposal pits are operating without permission.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AEI Consultants were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

LICENSED CONTRACTORS DECLARATION

I hereby affirm under penalty of perjury that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Div. 3 of the Business & Professions Code, and my license is in full force and effect.

Lic. Class C-21 Lic. No 691297 Exp. Date 6/96
Contractor Signature Laura Cullops

OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors License Law for the following reason (Sec. 7031.5, Business & Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors License Law (Chapter 9 commencing with section 7000) of Div. 3 of the Business & Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Sec. 7044, Business and Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he or she did not build or improve for the purpose of sale.)

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractors License Law.).

☐ I am exempt under Sec. _____, B.&P.C. for this reason

Date _____ Owner _____

WORKERS' COMPENSATION DECLARATION

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☒ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy # are:

Carrier: STATE FUND
Policy Number: 1401247-95 Date 6/96

(This section need not be completed if the permit is for one hundred dollars ($100) or less).

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date _____ Applicant _____

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, & ATTORNEY'S FEES

CONSTRUCTION LENDING AGENCY

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name _____

Lender's Address _____

I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above mentioned property for inspection purposes.

BUILDING DEPT.
JAN - 3 1994
CITY OF MORGAN HILL

Dec. 27. 1993

Dave Gonzales
Building Inspector

Regarding clean up on property at 1065 Half Rd. I have been in the Process of cleaning up the grounds. a continual cleaning will be done as the weather permitts. There is a problem with outsiders dumping their garbage during the early morning hrs. It has been impossible to catch them.

The tires on the back of the land are being removed gradually. and about the lean to's that are in question if you will meet with me and point out the one that you are refering to I will have them removed.

Sincerly
Mel Barbaria
(408) 847-2079

LICENSED CONTRACTOR'S DECLARATION: I hereby affirm under penalty of perjury that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect. License Number: Expiration Date:

SIGNATURE X_____ DATE_____

OWNER-BUILDER DECLARATION: I hereby affirm under penalty of perjury that I am exempt from the Contractors' License Law for the following reason(s) indicated below by the checkmark(s) I have placed next to the applicable item(s) (Sec. 7031.5, Business and Professions Code: Any city or county that requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for the permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors' License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt from licensure and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

(___) I, as owner of the property, or my employees with wages as their sole compensation, will do (__) all of or (__) portions of the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractors' State License Law does not apply to an owner of property who, through employees' or personal effort, builds or improves the property, provided that the improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the Owner-Builder will have the burden of proving that it was not built or improved for the purpose of sale.).

(X) I, as owner of the property, am exclusively contracting with licensed Contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractors' State License Law does not apply to an owner of property who builds or improves thereon, and who contracts for the projects with a licensed Contractor pursuant to the Contractors' State License Law.).

(___) I am exempt from licensure under the Contractors' State License Law for the following reasons: _____

By my signature below I acknowledge that, except for my personal residence in which I must have resided for at least one year to completion of the improvements covered by this permit, I cannot legally sell a structure that I have built as an owner-builder if it has not been constructed in its entirety by licensed contractors. I understand that a copy of the applicable law, Section 7044 of the Business and Professions Code, is available upon request when this application is submitted or at the following Web site: http://www.leginfo.ca.gov/calaw/html.

SIGNATURE X _____ DATE 4/27/16

WORKERS' COMPENSATION DECLARATION WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

I hereby affirm under penalty of perjury one of the following declarations:

(___) I have and will maintain a certificate of consent to self-insure for workers' compensation, issued by the Director of Industrial Relations as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. Policy No.:_____

(___) I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier: _____ Policy No: _____ Expiration Date: _____

Name of Agent: _____ Phone# (_____)_____

(___) I certify that, in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that, if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

SIGNATURE X _____ DATE _____

DECLARATION REGARDING CONSTRUCTION LENDING AGENCY: I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 8172, Civil Code). By my signature below, I certify to each of the following: I am the property owner or authorized to act on the property owner's behalf. I have read this application and the information I have provided is correct. I agree to comply with all applicable city and county ordinances and state laws relating to building construction. I authorize representatives of this city or county to enter the above-identified property for inspection purposes.

Lender's Name: _____ Lender's Address: _____

SIGNATURE X _____ DATE _____

I certify that I have read this application and state that the above information is correct. I agree to comply with all City and county ordinances and state laws relating to building construction, and hereby authorize representatives of this agency to enter upon the above-mentioned property for inspection purposes. I (we) further agree to save, indemnify, and keep harmless the City of Morgan Hill against liabilities, judgements, costs, and expenses which may in any way accrue against said City in consequence of the granting of this permit and will pay all expenses including attorney's fees in connection therewith. All work performed by virtue of this permit must conform to plans and specifications and application filed by the owner or his authorized agent with the Building Inspection Division. This permit does not constitute approval of any violation of the above recited provisions, nor of any state or city ordinance.

~~County of Santa Clara~~

Department of Planning and Development
Development Services Office

County Government Center, East Wing
70 West Hedding Street, 7th Floor
San Jose, California 95110
(408) 299-5700 Fax (408) 279-8537

NOTICE TO PROPERTY OWNER

Dear Property Owner:
An application for a building permit has been submitted in your name listing yourself as the builder of the property improvements specified at 100 Hall Rd. Morgan Hill, CA 95037

We are providing you with an Owner-Builder Acknowledgment and Information Verification Form to make you aware of your responsibilities and possible risk you may incur by having this permit issued in your name as the Owner-Builder.

We will not issue a building permit until you have read and initialed your understanding of each provision, signed, and returned this form to us at our official address indicated. An agent of the owner cannot execute this notice unless you, the property owner, obtain the prior approval of the permitting authority.

OWNER-BUILDER'S ACKNOWLEDGMENT AND INFORMATION VERIFICATION FORM

DIRECTIONS: Read and initial each statement below to signify you understand or verify this information.

___1. I understand a frequent practice of unlicensed persons is to have the property owner obtain an "Owner-Builder" building permit that erroneously implies that the property owner is providing his or her own labor and material personally. I, as an Owner-Builder, may be held liable and subject to serious financial risk for any injuries sustained by an unlicensed person and his or her employees while working on my property. My homeowner's insurance may not provide coverage for those injuries. I am willfully acting as an Owner-Builder and am aware of the limits of my insurance coverage for injuries to workers on my property.

___2. I understand building permits are not required to be signed by property owners unless they are *responsible* for the construction and are not hiring a licensed Contractor to assume this responsibility.

___3. I understand as an "Owner-Builder" I am the responsible party of record on the permit. I understand that I may protect myself from potential financial risk by hiring a licensed Contractor and having the permit filed in his or her name instead of my own.

___4. I understand Contractors are required by law to be licensed and bonded in California and to list their license numbers on permits and contracts.

___5. I understand if I employ or otherwise engage any persons, other than California licensed Contractors, and the total value of my construction is at least five hundred dollars ($500), including labor and materials, I may be considered an "employer" under state and federal law.

___6. I understand if I am considered an "employer" under state and federal law, I must register with the state and federal government, withhold payroll taxes, provide workers' compensation disability insurance, and contribute to unemployment compensation for each "employee." I also understand my failure to abide by these laws may subject me to serious financial risk.

___7. I understand under California Contractors' State License Law, an Owner-Builder who builds single-family residential structures cannot legally build them with the intent to offer them for sale, unless *all* work is performed by licensed subcontractors and the number of structures does not exceed four within any calendar year, or all of the work is performed under contract with a licensed general building Contractor.

___8. I understand as an Owner-Builder if I sell the property for which this permit is issued, I may be held liable for any financial or personal injuries sustained by any subsequent owner(s) that result from any latent construction defects in the workmanship or materials.

___9. I understand I may obtain more information regarding my obligations as an "employer" from the Internal Revenue Service, the United States Small Business Administration, the California Department of Benefit Payments, and the California Division of Industrial Accidents. I also understand I may contact the California Contractors' State License Board (CSLB) at 1-800-321-CSLB (2752) or www.cslb.ca.gov for more information about licensed contractors.

___10. I am aware of and consent to an Owner-Builder building permit applied for in my name, and understand that I am the party legally and financially responsible for proposed construction activity at the following address:

_____

_____

___11. I agree that, as the party legally and financially responsible for this proposed construction activity, I will abide by all applicable laws and requirements that govern Owner-Builders as well as employers.

(OVER)

12. I agree to notify the issuer of this form immediately of any additions, deletions, or changes to any of the information I have provided on this form.

Licensed contractors are regulated by laws designed to protect the public. If you contract with someone who does not have a license, the Contractors' State License Board may be unable to assist you with any financial loss you may sustain as a result of a complaint. Your only remedy against unlicensed Contractors may be in civil court. It is also important for you to understand that if an unlicensed Contractor or employee of that individual or firm is injured while working on your property, you may be held liable for damages. If you obtain a permit as Owner-Builder and wish to hire Contractors, you will be responsible for verifying whether or not those Contractors are properly licensed and the status of their workers' compensation insurance coverage.

Before a building permit can be issued, this form must be completed and signed by the property owner and returned to the agency responsible for issuing the permit.

(Notarized) Signature of Property Owner — Date: 4/25/16

When the Permit Application and the Owner-Builder Declaration have been executed by a person other than the property owner, prior to issuing the permit, the following shall be completed by the property owner and returned to the agency responsible for issuing the permit:

A notary public or other officer completing this certificate verifies only the identity of the individual who signed the document to which this certificate is attached, and not the truthfulness, accuracy, or validity of that document.

AUTHORIZATION OF AGENT TO ACT ON PROPERTY OWNER'S BEHALF

Excluding the Notice to Property Owner, the execution of which I understand is my personal responsibility, I hereby authorize the following person(s) to act as my agent(s) to apply for, sign, and file the documents necessary to obtain an Owner-Builder Permit for my project.

Scope of Construction Project (or Description of Work):
Meter base replacement / construction

Project Location or Address:
1105 Half Rd
Morgan Hill Ca 95037

Name of Authorized Agent:
Ian Teresi

Address of Authorized Agent:
15500 Hill Rd
Morgan Hill CA 95037

Phone Number of Authorized Agent: 4085939919

I declare under penalty of perjury that I am the property owner for the address listed above and I personally filled out the above information and certify its accuracy.

(Notarized) Signature of Property Owner — Date: 4/25/16

NOTARY'S ALL PURPOSE ACKNOWLEDGMENT

A notary public or other officer completing this certificate verifies only the identity of the individual who signed the document to which this certificate is attached, and not the truthfulness, accuracy, or validity of that document.

State of California
County of Santa Clara
On APRIL 25, 2016 before me, ESTHER R OLSON, NOTARY PUBLIC, (here insert name and title of the officer)
personally appeared RICHARD SINGER (Name(s) of Signer(s))

who proved to me on the basis of satisfactory evidence to be the person(s) whose name(s) is/are subscribed to the within instrument and acknowledged to me that he/she/they executed the same in his/her/their authorized capacity(ies), and that by his/her/their signature(s) on the instrument the person(s), or the entity upon behalf of which the person(s) acted, executed the instrument.

ESTHER R. OLSON

ASTM USER QUESTIONNAIRE

AEI Consultants

ASTM E 1527-13 USER QUESTIONNAIRE

To qualify for the protection offered under the EPA All Appropriate Inquiry (AAI) Standard, the User (entities seeking to use the ASTM E1527-13 Practice to complete an environmental site assessment of the property; i.e. Lenders and/or Borrowers) must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that AAI is not complete. This information should be the collective knowledge of the entities relying on the Phase I. **Please note that you are not being asked to evaluate the property, but rather to provide your knowledge of information on the property.**

Site Name/Address: Llagas, Morgan Hill properties (9 parcels) W/Cochrane Mission View Atelf

Property Owner (Name/Title/Company): Llagas, LLC.

Phone/Email: (408) 390-0323 ricksinger36@gmail.com

Key Site Personnel (Name/Title/Company): Rick Singer or Leata Phelps

Phone/Email: (408) 390-0323 (415) 271-628

Past Owner (Name/Title/Company) _____

Phone/Email: _____

1. Environmental cleanup liens that are filed or recorded against the property (40 CFR 312.25).
Did a search of recorded land title records (or judicial records where appropriate, see NOTE 1 below) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?

NOTE 1: In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

☐ Yes ☑ No If yes, please include an explanation in the space provided below:

2. Activity and land use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and vi).
Did a search of recorded land title records (or judicial records where appropriate, see NOTE 1 above) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?

Engineering Controls are defined as physical modifications to a site or facility to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property). Institutional Controls are defined as a legal or administrative restriction on the use of, or access to, a site or facility to 1) reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property, or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment.

☐ Yes ☑ No If yes, please include an explanation in the space provided below:

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).
Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

☐ Yes ☑ No If yes, please include an explanation in the space provided below:

4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).
Does the purchase price being paid for this property reasonably reflect the fair market value of the property?

☑ Yes ☐ No

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

☐ Yes ☐ No N/A

Comments:

5. Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).
Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example:

a. Do you know the past uses of the property?
☑ Yes ☐ No

b. Do you know of specific chemicals that are present or once were present at the property?
☐ Yes ☑ No

c. Do you know of spills or other chemical releases that have taken place at the property?
☐ Yes ☑ No

d. Do you know of any environmental cleanups that have taken place at the property?
☐ Yes ☑ No

If yes for questions above, please include an explanation in the space provided below:

6. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).
Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?

☐ Yes ☑ No If yes, please include an explanation in the space provided below:

APPENDIX H

QUALIFICATIONS

Elizabeth Scudero – Project Manager, Due Diligence

BA – Environmental Studies, University of California, Santa Cruz
BA – Feminist Studies (emphasis in Science, Technology, and Medicine), University of California, Santa Cruz

EPA accredited Asbestos Building Inspector
CA Certified Lead Sampling Technician

Ms. Scudero has been in the environmental service industry since 2013. She provides project management to ensure ASTM compliance and satisfaction of client requirements for Phase I Environmental Site Assessments, Environmental Transaction Screens, Regulatory Database Reviews, and Historical Records Reviews.

Project experience for Ms. Scudero includes:

- Phase I Environmental Site Assessments
- Limited Environmental Site Assessments
- Environmental Transaction Screens
- Records Research with Risk Assessments
- Regulatory Database Reviews
- Historical Records Reviews

In addition, prior to joining the environmental consulting industry, Ms. Scudero spent four years studying a diverse range of environmental disciplines including: restoration ecology, political ecology, environmental policy, agriculture and sustainable agriculture, environmental economics, environmental justice, and geography.

Ellen L. Caldaro – National Client Manager

B.S. – Environmental Science, concentration Biology, Long Island University
OSHA 40-hour HAZWOPER Training
Asbestos Inspector Training

Ms. Caldaro has been working in the environmental consulting and due diligence industry since 1993. Her project experience includes: Phase I Environmental Site Assessments (PHI), Phase II Limited Subsurface Investigations (PHII), Transaction Screens, Regulatory Database Reviews, Radon screening projects, asbestos sampling, lead-based paint sampling, air monitoring, and reviewing/evaluating Phase I reports. She has successfully completed assessments on a variety of industrial, commercial, and residential sites. Ms. Caldaro acts as a client liaison and her duties include management of portfolio projects involving numerous properties throughout the United States.

Project experience for Ms. Caldaro includes:

- Phase I Environmental Site Assessments, Phase II Limited Subsurface Investigations, Environmental Transaction Screens (ETS), Records Search with Risk Assessments (RSRA) and radon surveys
- Technical review of Phase I Site Assessments for compliance with ASTM, EPA's All Appropriate Inquiry (AAI) standards, Freddie Mac, Fannie Mae and individual client formats
- Design and implementation of appropriate scopes of work for Phase II soil and groundwater investigations for a variety of suspected contaminates for due diligence and liability purposes
- Groundwater Monitoring Well Installation and Monitoring Projects
- Design and implementation of an emergency drench shower and eye wash station compliance inspection program for a local hospital system

As a National Client Manager, Ms. Caldaro provides in-house technical guidance and review to ensure all projects meet ASTM, AAI standards, client's goals and scope requirements. In addition, Ms. Caldaro provides in-house training for new Project Mangers as well as promotional training for Senior Authors and National Client Managers.

Ms. Caldaro uses her experience in the environmental service industry for developing and understanding client goals to facilitate the delivery of consulting services to meet those needs.

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Executive Summary

Property Information:

Project Property:		*Fry Property* *1105 Half Road Morgan Hill CA 95037*
Project No:		*25019-019069.00*
Coordinates:		
	Latitude:	*37.150187*
	Longitude:	*-121.643234*
	UTM Northing:	*4,112,394.96*
	UTM Easting:	*620,484.90*
	UTM Zone:	*UTM Zone 10S*
Elevation:		*388 FT*

Order Information:

Order No:	*20190624041*
Date Requested:	*June 24, 2019*
Requested by:	*Bureau Veritas North America, Inc.*

Violations

Violation Date: 11/14/2013 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.7 25281.5(b)(3) - California Health and Safety Code, Chapter 6.7, Section(s) 25281.5(b)(3)
Violation Notes:

Returned to compliance on 11/28/2013.

Violation Description:

Failure to conduct daily visual inspections each time the tank is operated, but not less than monthly, and maintain a log of inspection results for review of the CUPA.

Violations

Violation Date: 10/17/2016 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.75 25299.30-25299.34 - California Health and Safety Code, Chapter 6.75, Section(s) 25299.30-25299.34
Violation Notes:

Returned to compliance on 12/07/2016. The most recent CERS submittal on 1/19/2016 does not include a UST Certification of Financial Responsibility (CFR) form. The facility uploaded to CERS an expired UST Financial Responsibility Insurance Policy # G24761253-002, exp: 9/5/2015. In addition, the CFO Letter was dated 12/4/2013 and incomplete for not identifying the following: Total Tangible Assets, Total Liabilities and Tangible Net Worth.

Violation Description:

Failure to submit and maintain complete and current Certification of Financial Responsibility or other mechanism of financial assurance.

Violations

Violation Date: 11/14/2013 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.95 Multiple - California Health and Safety Code, Chapter 6.95, Section(s) Multiple
Violation Notes:

Returned to compliance on 12/06/2013. Facility failed to submit a hazardous materials inventory, a hazardous materials storage map and site plan, emergency response plans/contingency plan, and employee training. DISREGARD CORRECTIVE ACTION TEXT BELOW REGARDING SUBMITTAL OF HARD COPY FORMS. SEE www.EHinfo.org/hazmat FOR DETAILS REGARDING ELECTRONIC REPORTING REQUIREMENTS. A FACILITY RECORD FOR THIS SITE HAS ALREADY BEEN CREATED ON THE CALIFORNIA ENVIRONMENTAL REPORTING SYSTEM (CERS) WEBSITE AT http://cers.calepa.ca.gov. REQUEST ACCESS TO THAT CERS RECORD AND SUBMIT A REVISED HMBP WITHIN 30 DAYS..

Violation Description:

Business Plan Program - Administration/Documentation - General

Violations

Violation Date: 10/17/2016 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Santa Clara County Environmental Health
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Notes:

Returned to compliance on 12/07/2016. The spill bucket was filled with 5-gallons of water, however after 60-minutes a noted loss was detected. The spill bucket's drain valve was removed and cleaned. The bucket was retested and a notable loss of liquid was observed.

Violation Description:

Failure of the overfill prevention system to meet one of the following requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive

shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.

Violations

Violation Date: 10/17/2016 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Santa Clara County Environmental Health
Citation: 23 CCR 16 2712(f) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(f)
Violation Notes:

Returned to compliance on 12/07/2016. The 10/20/2015 Notice of Inspection, noting corrective actions taken was due to be received by 11/19/2015.

Violation Description:

Failure to implement the corrections specified in the inspection report within 30 calendar days of receiving an inspection report from either the CUPA or special inspector.

Violations

Violation Date: 10/17/2016 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Santa Clara County Environmental Health
Citation: 23 CCR 16 2632(d)(1)(C), 2641(h), 2711(a)(8) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2632(d)(1)(C), 2641(h), 2711(a)(8)
Violation Notes:

Returned to compliance on 12/07/2016. The UST Site Plan lists incorrect sensor model numbers for L-1, L-2 & L-3. The correct sensor numbers are L-1 794380-301, L-2 & L-3 794380-208.

Violation Description:

Failure to submit or update a plot plan.

Violations

Violation Date: 11/14/2013 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Santa Clara County Environmental Health
Citation: 23 CCR 16 2641(a) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(a)
Violation Notes:

Returned to compliance on 12/10/2013. Test boots on the transition sump were not pulled back to allow a leak from secondary containment piping to enter the sump. Shrader valves were closed and oriented towards 12 o'clock. Corrective action: Pull back test boot or ensure shrader valves are open and oriented toward 6 o'clock.

Violation Description:

Failure of sensor to be located in the proper position/location.

Violations

Violation Date: 10/17/2016 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Santa Clara County Environmental Health
Citation: 23 CCR 16 2715(a) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(a)
Violation Notes:

Returned to compliance on 12/07/2016. Designated Operator Michael Pietsch is not listed as a recognized Designated Operator for this site.

Violation Description:

Failure to notify the CUPA of the designated operator (DO) identification and/or change of the DO within 30 days.

Violations

Violation Date: 11/14/2013 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Santa Clara County Environmental Health
Citation: 23 CCR 16 2712(i) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(i)
Violation Notes:

Returned to compliance on 12/06/2013. Current Monitoring Plan inaccurately identifies type of sensor for annular space monitoring. Plan identifies a 208 sensor monitors the annular space although a 301 is currently used. Additionally, Monitoring Plan states annular space is "dry" when in fact it is brine filled. Lastly, the plan does not have a date and is not signed by responsible party. DISREGARD CORRECTIVE ACTION TEXT BELOW REGARDING SUBMITTAL OF HARD COPY FORMS. SEE www.EHinfo.org/hazmat FOR DETAILS REGARDING ELECTRONIC REPORTING REQUIREMENTS. A FACILITY RECORD FOR THIS SITE HAS ALREADY BEEN CREATED ON THE CALIFORNIA ENVIRONMENTAL REPORTING SYSTEM (CERS) WEBSITE AT http://cers.calepa.ca.gov. REQUEST ACCESS TO THAT CERS RECORD AND SUBMIT UST MONITORING PLAN(S) FOR APPROVAL.

Violation Description:

Failure to maintain on site an approved monitoring plan.

Violations

Violation Date: 11/14/2013 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.7 Multiple Sections - California Health and Safety Code, Chapter 6.7, Section(s) Multiple Sections
Violation Notes:

Returned to compliance on 12/06/2013. Facility and tank information pages were not signed below by a responsible party. Additionally facility does not include tank operator or owner information. Designated Operator inspections identify facility inaccurately as "O'connor De Paul Health Center".

Violation Description:

UST Program - Administration/Documentation - General

Violations

Violation Date: 11/14/2013 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Santa Clara County Environmental Health
Citation: 19 CCR 4 2729.5 - California Code of Regulations, Title 19, Chapter 4, Section(s) 2729.5
Violation Notes:

Returned to compliance on 12/06/2013.

Violation Description:

Failure to submit inventory reports (Activities, Owner/Operator, Hazardous Materials Descriptions and Map pages, if required. Documentation must be resubmitted (for facilities which exceed EPCRA thresholds) or re-certified (for facilities which do not exceed EPCRA thresholds) by March 1.

Violations

Violation Date: 11/14/2013 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.7 25292(e) - California Health and Safety Code, Chapter 6.7, Section(s) 25292(e)
Violation Notes:

Returned to compliance on 12/10/2013. Secondary containment testing on 11-04-11 indicate a failure in the secondary pipe (supply) with unknown source of failure and a failure in the penetration boots of the STP piping sump (supply and return). These failures remain uncorrected. A copy of the most recent secondary containment testing was obtained at time of inspection.

Violation Description:

Failure to maintain secondary containment, as evidenced by failure of secondary containment testing.

Violations

Violation Date: 11/14/2013 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Santa Clara County Environmental Health
Citation: 23 CCR 16 2715(b) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(b)
Violation Notes:

Returned to compliance on 12/06/2013. UST Owner failed to sign the "Underground Storage Tank System Owner Statements of Designated UST Operator and Understanding of and Compliance With UST Requirements". Additionally the facility is incorrectly named "City De Paul Health Center". Facility should be identified as De Paul Health Center.

Violation Description:

Failure to submit statement of UST compliance and/or Designated Operator current certification.

Violations

Violation Date: 11/14/2013 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Santa Clara County Environmental Health
Citation: 23 CCR 16 2715(f) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(f)
Violation Notes:

Returned to compliance on 12/11/2013. Facility was unable to provide any training documentation.

Violation Description:

Failure to comply with one or more of the following: provide training to facility employee(s) responsible for proper operation and maintenance every 12 months

and/or

train new employee(s) who are responsible for proper operation and maintenance within 30-days of hire

and/or

to have at least one employee present during operating hours that has been trained in the proper operation and maintenance of the UST system.

Violations

Violation Date: 10/21/2015 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Santa Clara County Environmental Health
Citation: 23 CCR 16 2666(c) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2666(c)
Violation Notes:

Returned to compliance on 05/24/2018. . No daily UST Alarm inspections (or dial-out alarm notification) has been conducted for this UST system. .

Violation Description:

Failure of line leak detector to detect a leak and/or failure of audible and visual alarm.

Violations

Violation Date: 10/17/2016 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Santa Clara County Environmental Health
Citation: 23 CCR 6.7 25284, 25286 - California Code of Regulations, Title 23, Chapter 6.7, Section(s) 25284, 25286
Violation Notes:

Returned to compliance on 12/07/2016. The field for "Isolation" on the Tank Information page under the heading for "Corrosion Protection" should be marked as "Yes". The field for "Piping System Type" on the Tank Information page under the heading for "Product / Waste Piping Construction" should be marked as "pressurized". The field for "Primary Containment" on the Tank Information page under the heading for "Product / Waste Piping Construction" should be marked as "Flexible".

Violation Description:

Failure to submit a complete and accurate application for a permit to operate a UST, or for renewal of the permit.

Violations

Violation Date: 10/20/2016 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Santa Clara County Environmental Health
Citation: 23 CCR 16 2641(h) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(h)
Violation Notes:

Returned to compliance on 12/07/2016. The UST Monitoring Plan for the most recent CERS submittal on 1/19/2016 contained the following errors and omissions: Tank Monitoring Section: --Leak Sensor Manufacturer: Veeder-Root --Leak Sensor Model #: 794380-301 --The box for Monthly Statistical Inventory Reconciliation was marked as YES when it should not be marked. Pipe Monitoring Section: --Leak Sensor Manufacturer: Veeder-Root --Leak Sensor Model #: 794380-208 --Pipeline Integrity Testing section was not completed (Frequency: Annually) --Visual Pipeline Monitoring box was not selected. --Visual Pipeline Monitoring Frequency was not identified.

Violation Description:

Failure to have an approved UST Monitoring Plan.

Violations

Violation Date: 10/16/2017 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Santa Clara County Environmental Health
Citation: HSC 6.95 25508.2 - California Health and Safety Code, Chapter 6.95, Section(s) 25508.2
Violation Notes:

Returned to compliance on 05/24/2018. Facility failed to electronically submit their annual update via CERS.

Violation Description:

Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.

Violations

Violation Date: 10/21/2015 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Santa Clara County Environmental Health
Citation: 23 CCR 16 2636(f)(4) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(4)
Violation Notes:

Returned to compliance on 05/24/2018. . Annual Line Tightness Test has not been done on this UST system. .

Violation Description:

Failure to perform and/or pass the annual line integrity test for pressurized piping that does not utilize fail safe or shut down.

Violations

Violation Date: 11/14/2013 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Santa Clara County Environmental Health

Violation Notes:

Returned to compliance on 12/06/2013. Response plan does not have name and title of responsible persons or name, title, and signature of owner/operator. SUBMIT ON CERS.

Violation Description:

Failure to submit, obtain approval, or maintain a complete/accurate response plan.

Violations

Violation Date: 10/17/2016 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Santa Clara County Environmental Health

Citation: 23 CCR 16 2636(f)(6) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(6)
Violation Notes:

Returned to compliance on 12/07/2016. The UST system is no longer being utilized as an Emergency Generator Tank System and the piping is required to be monitored by an automatic line leak detector (LLD) capable of detecting a 3 gallon-per-hour leak rate at 10 p.s.i.g. within 1 hour.

Violation Description:

Failure to meet one or more of the following requirements in lieu of a line leak detector (LLD) for emergency generator tank systems:
Continuous monitoring system activates an audible and visual alarm.
Monitoring system is checked daily.
A log of daily checks is available for the CUPA to review.

Violations

Violation Date: 10/16/2017 ***Violation Source:*** CERS

Eval Notes:

On-site for the annual UST monitoring certification with the functional testing that was completed by Darren Sciume from Tanknology, Inc. Mr. Sciume's certifications (ICC Service Technician and Veeder-Root) were verified to be current. Ben Nguyen, Chief Engineer was present during the functional testing. The monitoring panel displayed "All functions normal" at the beginning and end of the functional testing. The sump sensors (STP and Transition) were tested with water and provided audible and visible alarms. Additionally, brine-filled interstitial space provided alarm when sensor was removed from the brine. All liquid sensors dialed out via the Sensaphone 400 and communication was verified for each liquid sensor. Overfill protection is provided by a flapper valve in the fill tube. Confirmed that the site is conducting visual inspection of the aboveground piping as required (electronic work order). Annual Line Tightness Test was completed on 12/16/16. [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

I was on site, !0/20/2015, 18500 De Paul Dr, Morgan Hill, to conduct the 2015 UST Permit Inspection and records review and witness the UST Monitoring Certification. No facility representative on site. I called Luciano Costa, (408) 848-8649, while on site, there was no answer, left a message. Sent email to: lucianocosta@dochs.org Ben Nguyen, Chief Engineer, (408) 848-8635 contacted, and is now on site to provide access and records review. bennguyen@dochs.org Brian Self, Confidence UST Services, Inc. was on site to conduct the UST Monitoring System Certification. ICC # 8022804 Serv Tech Expires 6/8/2017, VR - Expires 6/25/2017 Spill Bucket testing, A drop in water level is observed. Serviced drain valve, re-test, 60 minutes, no drop observed. OK Monthly DUSTO Reports are with Ben Nguyen at his office, off-site. He provided the hard copy DUSTO reports today on site as requested. OK CERS Review, Submitted 7/15/2015, Submitted, Status change to " Under [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

On-site to witness the secondary containment testing of a STP sump, supply and return piping and a piping transition sump. All testing was completed by Jarrod Cooke, Service Technician from Tanknology, Inc. Mr. Cooke's ICC certification was verified to be current. Both piping runs (supply and return) were pressurized with nitrogen to 5-psi for 60-minutes with no loss of pressure; PASS. The tank's annular space is hydrostatically monitored and not required to be tested. The STP sump and piping transition sump were filled with water above the pressurized piping penetration and tested with a Tanknology VPLT accelerated tester for 30-mimutes. Final sump readings: STP Sump: -0.0013"; PASS Piping Transition Sump: -0.0003"; PASS Provide a copy the Secondary Containment Test Report by 12/30/16. Contact Ray Maiden at ray.maiden@cep.sccgov.org or by phone at 408-918-1980 for questions regarding this report.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

On-site to witness annual UST monitoring certification, spill bucket testing, and to perform an inspection of the underground storage tank system. Testing performed by Brent Bowen of Tanknology. Mr. Bowen holds valid ICC and Veeder-Root certifications. In addition, the following testing was performed: *Testing of overfill protection - Drop tube with flow restrictor (flapper) removed. Flapper manually moved and visually confirmed it closes all the way. Measurements were taking to determine how high restrictor is set in the tank and will be compared to the tank chart in order to determine if the restrictor is set at the proper level. Technician attempting to locate a tank chart. *Line tightness testing Alarms are communicated to staff off-site and communication was confirmed to be occurring at time of testing. UST system performed as designed without exception. Facility is transitioning to a suction under project SR0858378 in order to be complaint and avoid the [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Division: Santa Clara County Environmental Health
Eval Program: UST
Eval Source: CERS
Eval Notes:

The annual UST monitoring certification began on 10/17/16 with the functional testing that was completed by Mike Gathright from Petro-Analytical Inc. Mr. Gathright's certifications (ICC Service Technician, Veeder-Root Level 2/3) were verified to be current. The inspection was completed on 10/20/16 with a review of the UST documents with Ben Nguyen, Chief Engineer. This report was revised on 12/6/16 to retract violation T861:EXEMPTION CONDITIONS: EGTS LLD. After a review of the Emergency Generator Tank System (EGTS) requirements this office has concluded that violation T861 was incorrectly cited. The operability of the emergency generator is not a requirement of maintaining EDTS status. Although the emergency generator is not currently being operated, the configuration to supply emergency power to the hospital remains unchanged. Richard Gilman, Stationary Engineer with

De Paul Medical Center was present during the functional testing on 10/17/16. Alarm [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

Observed secondary containment testing, conducted by Jarrod Cooke, ICC Service Technician, Exp: 4/30/15, from Tanknology. Site set-up: 1-Diesel fuel tank with a brine filled annular space. Components tested: Secondary containment piping for both the supply and return lines, STP sump and transition sump. The secondary containment piping for both the supply and return lines were pressurized to 5-psi with nitrogen for 60-minutes with no loss of pressure---PASS. The STP sump was hydrostatically tested at the highest piping penetration for 30-minutes, using the VPLT precision test system---PASS. The transition sump was not tested due to a visible tear in the rock-guard boot. Facility must make required repairs and retest the transition sump by January 9, 2014. Contact this office at 408-918-3400 at least 48-hr prior to scheduling the retest.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Description History:	The Site is located at the northeastern corner of the intersection of Peet Road and Mission Avenida in Morgan Hill, California, in the County of Santa Clara. The site was used for agricultural purposes from prior to 1939 until sometime between 1998 and 2005. The site also had three existing and former structures of such an age that building maintenance may have introduced pesticides and/or metals to shallow soil. Recent investigations indicated concentrations of organochlorine pesticide in soil that exceed health risk-based screening levels. The site was previously owned by Mr. Stanly Borello for over 50 years.

Site History:

The Borello Property is a Targeted Site Investigation (TSI) project under a grant from the U.S. Environmental Protection Agency (USEPA). The Borello Property is located at Peet Road, east of Mission Avenida in Morgan Hill, Santa Clara County, California (Site). According to the TSI application, the Morgan Hill Unified School District (District) selected the approximately nine-acre Site for the future elementary school. The Site is owned by the Lupine Investors, LLC. The District plans to construct a new elementary school at the Site with approximately 27 classrooms for 600 students. The District anticipates beginning construction in summer 2017 with school opening in August 2018.

The Site was used as an orchard from the early 1900s through September 2004. Currently, two structures are located at the Site, a milk barn (currently used as a workshop and storage building) and a real estate sales office (temporary structure). A former barn was located on the northwestern portion of the Site. Soil stockpiles are located on the northwestern portion of the Site. Ultramafic outcrops are mapped within ½ mile of the Site. In 2005, the Site (part of the 14-acre Borello property) was remediated to reduce the concentrations of organochlorine pesticides (OCPs) at the agricultural field (DTSC Project Code 201563). However, subsequent investigations in 2014 and early 2016 confirmed that elevated concentrations of dieldrin remain at the Site.

On January 21, 2016, DTSC and their consultant, Geocon, conducted a site visit and a scoping meeting with the District and their consultants (McKim Design Group and School Site Solutions). The TSI PEA covers Geocon's review of available documents, a human health screening evaluation based on data reported by others, and the preparation of the TSI PEA Report.

On March 17, 2016, DTSC received the TSI PEA Report for review and approval. The following are the conclusions of the TSI PEA based on previous soil sampling activities completed at the Site: - Arsenic concentrations in surface soil samples from the agricultural field (ranging from 6.7 to 12 milligram per kilogram (mg/kg)), around the milk barn (ranging from <1.7 to 1.7 mg/kg), and around the area of the former barn (ranging from 3.5 to 11 mg/kg) are within the regional background arsenic concentrations in soil; - Maximum lead concentration detected at the Site is 17 mg/kg, which is below the California Human Health Screening Level of 80 mg/kg; - Elevated concentration of dieldrin were detected at various depths in the agricultural field area that exceeded the United States Environmental Protection Agency Regional Screening Level of 0.034 mg/kg for dieldrin in soil based on residential land use scenario; - OCP concentrations detected around the milk barn and the area of the former barn are below their respective screening levels; - NOA was not detected above the DTSC's NOA Tiered Response Action Process of 0.01 percent by weight by transmission electron microscopy; and, - Soils beneath the stockpiles should be sampled and analyzed for chemicals of potential concern. If the soil stockpiles are to be used as on-site fill material, the stockpiles will need to be evaluated following the DTSC Information Advisory Clean Imported Fill Material dated October 2001. The result of the human health screening evaluation for the detected OCPs indicates a cumulative cancer risk of 4.26x10-6, which exceeds the DTSC's point of departure of one in one million (1x10-6). While the total non-cancer hazard index was calculated as 1.23x10-2, which is below DTSC's point of departure (1.0). The TSI PEA concludes further action is needed to reduce or eliminate the potential impact of dieldrin in soils at the Site. On April 6, 2016, DTSC issued comments on the draft PEA Report.

On April 21, 2016, the District notified the DTSC that it had complied with all public review and comment requirements for the TSI PEA Report pursuant to Education Code section 17213.1(a)(6)(A). The District made the TSI PEA Report available for public review and comment from March 16, 2016 through April 14, 2016, and a public hearing was held on April 5, 2016. No public comments were received regarding the TSI PEA Report. On May 4, 2016, DTSC concurred with the conclusions of the TSI PEA Report and approved the TSI PEA Report.

On September 26, 2016, DTSC received the draft Removal Action Workplan (RAW-McCloskey Consultant Inc.) addressing the remediation of the OCP-impacted soil (specifically chlordane and dieldrin) for review and comment. The objective of the RAW is to mitigate potential risk to human health and the environment by the excavation and off-site disposal of approximately 22,665 bank cubic yards of impacted soil exceeding the cleanup levels for chlordane and dieldrin to an appropriately permitted off-site disposal facility. On October 24, 2016 and November 16, 2016, DTSC provided comments on the draft RAW.

On January 21, 2017, DTSC was notified by the District that the soil stockpile at the Site will not be removed by the owner and is now part of the RAW. On February 14, 2017, the District's consultant notified DTSC that additional samples will be collected at the site (specifically the soil stockpile and some portions of the agricultural area) for additional characterization. The additional sampling data information will be provided to DTSC in a tech memo for review and approval. DTSC did no receive the tech memo.

On May 4, 2017, DTSC received the draft Updated RAW (Cleary Consultant Inc.). The draft Updated RAW is considered to be a new draft RAW due to the fact that the District change consultants after DTSC's review of the first draft (McCloskey Consultant Inc.) and did not provide a complete response to comments table. DTSC reviewed the draft Updated RAW in its entirety, as a new draft submittal. The draft Updated RAW also includes additional sampling results conducted in Area A, Area B and the stockpile. On May 25, 2017, DTSC issued comments on the draft Updated RAW.

The objective of the RAW is to mitigate potential risk to human health and the environment by the excavation and off-site disposal of approximately 19,700 cubic yards (approximately 17,000 cubic yards from the former agricultural field area and approximately 2,700 cubic yards from the upper three feet of the stockpile material) of soil containing concentrations of dieldrin and chlordane that exceed the unrestricted land use cleanup goal. Pursuant to CEQA requirements, the District prepared an Initial Study/Mitigated Negative Declaration (MND) to address the school construction project including the expected Site cleanup. The MND was made available for public comment concurrently with the revised draft RAW. DTSC will complete a Statement of Findings and a Notice of Determination once the District has approved the MND.

On June 30,2017, DTSC has determined that the revised draft RAW is adequate for public review. The formal 30-day public comment period for the revised draft RAW was from July 7, 2017 through August 7, 2017. A public meeting was held at Community and Cultural Center in Morgan Hill on July 27, 2017. DTSC received comments from 24 parties (note that some parties sent multiple and/or duplicate comments) during the public comment period. The comments were evaluated with respect to the RAW and DTSC forwarded response to public comments to the parties who submitted comments and provided sufficient contact information. Based on the comments received, DTSC determined that minor modifications of the RAW were necessary and worked with the District to finalize the document. On November 16, 2017, DTSC approved the revised RAW for implementation. DTSC issued the response to comments on November 17 and 20, 2017.

The District's CEQA document was challenged by A Voice for Choice (petitioner) in September 2017. The District acquired the Site in December 2017. In March 2018, during a phone conversation, the District indicated that the court is waiting for the petitioner to narrow the scope of their challenge. The initial court date of March 12, 2018 was continued to April 6, 2018 because petitioner had not narrowed the scope on that date.

Multiple delays in hearing the CEQA challenge; currently scheduled for August 31, 2018. The implementation of the DTSC-approved RAW is pending until this issue is resolved.

Potential Media Affected: SOIL
Potential Contamin of Concern:

DIELDRIN, TOXAPHENE

Site History:

The former Borello property was cultivated with apricot and cherry orchards as early as the early-1900s through 2004. Environmental sampling conducted in 2004 in support of the 2005 sale of the property and proposed redevelopment for residential purposes identified the presence of organochlorine pesticides in the soil. In May 2005, under DTSC oversight, an environmental consultant applied in-situ bioremediation treatment products to break down the organochlorine pesticides. Based on the soil confirmation samples, DTSC certified the completion of the removal action in October 2005. In 2014, soil sampling and analysis was conducted to evaluate site conditions prior to developing the property for an elementary school, public park, and residential use. Organochlorine pesticides (dieldrin and toxaphene) were present in soil samples from the eastern 2 acres of this Site (a 3.04 acre portion of the former 14-acre Borello property that was remediated in 2005). The 2017 Removal Action Workplan for the Site now calls for the excavation and disposal of approximately 6,900 cubic yards of soil.

Office: CLEANUP BERKELEY
Past Use that Caused Contam: AGRICULTURAL - ORCHARD
Potential Media Affected: SOIL
Potential Contamin of Concern:

DIELDRIN, TOXAPHENE

Site History:

The former Borello property was cultivated with apricot and cherry orchards as early as the early-1900s through 2004. Environmental sampling conducted in 2004 in support of the 2005 sale of the property and proposed redevelopment for residential purposes identified the presence of organochlorine pesticides in the soil. In May 2005, under DTSC oversight, an environmental consultant applied in-situ bioremediation treatment products to break down the organochlorine pesticides. Based on the soil confirmation samples, DTSC certified the completion of the removal action in October 2005. In 2014, soil sampling and analysis was conducted to evaluate site conditions prior to developing the property for an elementary school, public park, and residential use. Organochlorine pesticides (dieldrin and toxaphene) were present in soil samples from the eastern 2 acres of this Site (a 3.04 acre portion of the former 14-acre Borello property that was remediated in 2005). The 2017 Removal Action Workplan for the Site now calls for the excavation and disposal of approximately 6,900 cubic yards of soil.

Status: CERTIFIED
Program Type: VOLUNTARY CLEANUP

Past Use that Caused Contam: AGRICULTURAL - ORCHARD, AGRICULTURAL - ROW CROPS
Potential Media Affected: SOIL
Potential Contamin of Concern:

CHLORDANE, DIELDRIN

Site History:

Organochlorine pesticides from past agricultural use were detected in the shallow soil samples that were collected from the Site, and dieldrin was identified as the primary chemical of potential concern (COPC), with chlordane as a secondary COPC. The other organochlorine pesticides that were detected in soil were at relatively low concentrations. Arsenic was also detected in the samples collected from the Site in 2011 at concentrations ranging from 1.8 to 13 milligrams per kilogram (mg/kg). Dieldrin was detected in 53 soil samples at concentrations ranging from not detected to 96 micrograms per kilogram (µg/kg); eighteen of the 53 soil samples had dieldrin concentrations that exceeded their respective residential U.S. Environmental Protection Agency Regional Screening Level (RSL). A statistical evaluation of the dieldrin concentrations in soil was performed as part of the Human Health Screening Risk Evaluation and the 95 percent upper confidence limit of the mean concentration (95% UCL) was calculated using several statistical methods. The highest calculated 95% UCL was 30.43 µg/kg, which is below the residential RSL of 34 µg/kg. Based on this evaluation, it was concluded that the presence of dieldrin in onsite soil did not pose a human health risk for future residential receptors. The other reported pesticide concentrations were below levels of concern for residential development. Arsenic concentrations were consistent with naturally-occurring background concentrations in Santa Clara County.

Impacted soil was removed at two sampling locations where chlordane was detected at concentrations of 4,800 and 1,100 µg/kg. The final excavations each measured approximately 26 feet in length by 10 feet in width by 18 inches in depth. A total of approximately 30 cubic yards of soil was removed from the Site and disposed as non-hazardous waste at a permitted, off-Site landfill. The sampling performed following the soil removal work confirmed that chlordane concentrations in the remaining soil in the excavation areas are at or are below the residential RSL for chlordane.

Document Type: Preliminary Endangerment Assessment Report
Date Completed: 3/4/2016
Comments: DTSC reviewed a Phase I Environmental Site Assessment and risk evaluation reports prepared for the site. Dieldrin from past agricultural use was detected in soil samples collected from across the site and was identified as the primary chemical of potential concern. However, based on the risk evaluation it was concluded that the presence of dieldrin in soil does not pose a human health risk for future residential receptors. Soil was removed at two sampling locations where chlordane was detected at concentrations of 1,110 and 4,800 micrograms per kilogram. Arsenic was detected in soil at concentrations consistent with naturally-occurring background concentrations in Santa Clara County. DTSC concluded that no further action is required at the Site and that the planned residential development is acceptable.

Comments: The site does not appear to pose a threat to human health or the environment under a residential land use scenario. Therefore, DTSC determines that no further action is necessary with respect to investigation and remediation of hazardous substances at the property. If previously unidentified contamination is discovered at the site, additional assessment, investigation and/or cleanup may be required.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

National Priority List: NPL

National Priorities List (Superfund)-NPL: EPA's (United States Environmental Protection Agency) list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action.

Government Publication Date: Apr 11, 2019

National Priority List - Proposed: PROPOSED NPL

Includes sites proposed (by the EPA, the state, or concerned citizens) for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

Government Publication Date: Apr 11, 2019

Deleted NPL: DELETED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Government Publication Date: Apr 11, 2019

SEMS List 8R Active Site Inventory: SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

Government Publication Date: Apr 11, 2019

SEMS List 8R Archive Sites: SEMS ARCHIVE

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Government Publication Date: Apr 11, 2019

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Mar 4, 2019

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Government Publication Date: Mar 4, 2019

RCRA Generator List: RCRA LQG

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Mar 4, 2019

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Mar 4, 2019

RCRA Conditionally Exempt Small Quantity Generators List: RCRA CESQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Conditionally Exempt Small Quantity Generators (CESQG) generate 100 kilograms or less per month of hazardous waste or one kilogram or less per month of acutely hazardous waste.

Government Publication Date: Mar 4, 2019

RCRA Non-Generators: RCRA NON GEN

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Mar 4, 2019

Federal Engineering Controls-ECs: FED ENG

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Sep 20, 2018

Federal Institutional Controls- ICs: FED INST

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

Government Publication Date: Sep 20, 2018

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Mar 21, 2019

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 11, 2019

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Petroleum Refineries: REFN

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Jul 17, 2018

Petroleum Product and Crude Oil Rail Terminals: BULK TERMINAL

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

Government Publication Date: Jan 18, 2019

LIEN on Property: SEMS LIEN

The EPA Superfund Enterprise Management System (SEMS) provides LIEN information on properties under the EPA Superfund Program.

Government Publication Date: Apr 11, 2019

Superfund Decision Documents: SUPERFUND ROD

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

Government Publication Date: Apr 11, 2019

State

State Response Sites: RESPONSE

A list of identified confirmed release sites where the Department of Toxic Substances Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk. This database is state equivalent NPL.

Government Publication Date: Mar 11, 2019

EnviroStor Database: ENVIROSTOR

The EnviroStor Data Management System is made available by the Department of Toxic Substances Control (DTSC). Includes Corrective Action sites, Tiered Permit sites, Historical Sites and Evaluation/Investigation sites. This database is state equivalent CERCLIS.

Government Publication Date: Mar 11, 2019

Delisted State Response Sites: DELISTED ENVS

Sites removed from the list of State Response Sites made available by the EnviroStor Data Management System, Department of Toxic Substances Control (DTSC).

Government Publication Date: Mar 11, 2019

Solid Waste Information System (SWIS): SWF/LF

The Solid Waste Information System (SWIS) database made available by the Department of Resources Recycling and Recovery (CalRecycle) contains information on solid waste facilities, operations, and disposal sites throughout the State of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites.

Government Publication Date: May 13, 2019

EnviroStor Hazardous Waste Facilities: HWP

A list of hazardous waste facilities including permitted, post-closure and historical facilities found in the Department of Toxic Substances Control (DTSC) EnviroStor database.

Government Publication Date: Mar 11, 2019

Sites Listed in the Solid Waste Assessment Test (SWAT) Program Report: SWAT

In a 1993 Memorandum of Understanding, the State Water Resources Control Board (SWRCB) agreed to submit a comprehensive report on the Solid Waste Assessment Test (SWAT) Program to the California Integrated Waste Management Board (CIWMB). This report summarizes the work completed to date on the SWAT Program, and addresses both the impacts that leakage from solid waste disposal sites (SWDS) may have upon waters of the State and the actions taken to address such leakage.

Government Publication Date: Dec 31, 1995

Land Disposal Sites: LDS

Land Disposal Sites in GeoTracker, the State Water Resources Control Board (SWRCB)'s data management system. The Land Disposal program regulates of waste discharge to land for treatment, storage and disposal in waste management units. Waste management units include waste piles, surface impoundments, and landfills.

Government Publication Date: Apr 10, 2019

Leaking Underground Fuel Tank Reports: LUST

List of Leaking Underground Storage Tanks within the Cleanup Sites data in GeoTracker database. GeoTracker is the State Water Resources Control Board's (SWRCB) data management system for managing sites that impact groundwater, especially those that require groundwater cleanup (Underground Storage Tanks, Department of Defense and Site Cleanup Program) as well as permitted facilities such as operating Underground Storage Tanks. The Leak Prevention Program that overlooks LUST sites is the SWRCB in California's Environmental Protection Agency.

Government Publication Date: Apr 10, 2019

Delisted Leaking Storage Tanks: DELISTED LST

List of Leaking Underground Storage Tanks (LUST) cleanup sites removed from GeoTracker, the State Water Resources Control Board (SWRCB)'s database system, as well as sites removed from the SWRCB's list of UST Case closures.

Government Publication Date: Apr 10, 2019

Permitted Underground Storage Tank (UST) in GeoTracker: UST

List of Permitted Underground Storage Tank (UST) sites made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA).

Government Publication Date: May 1, 2019

Solid Waste Disposal Sites with Waste Constituents Above Hazardous Waste Levels: SWRCB SWF

This is a list of solid waste disposal sites identified by California State Water Resources Control Board with waste constituents above hazardous waste levels outside the waste management unit.

Government Publication Date: Sep 20, 2006

Proposed Closure of Underground Storage Tank Cases: UST CLOSURE

List of UST cases that are being considered for closure by either the California Environmental Protection Agency, State Water Resources Control Board or the Executive Director that have been posted for a 60-day public comment period.

Government Publication Date: Mar 11, 2019

Historical Hazardous Substance Storage Information Database: HHSS

The Historical Hazardous Substance Storage database contains information collected in the 1980s from facilities that stored hazardous substances. The information was originally collected on paper forms, was later transferred to microfiche, and recently indexed as a searchable database. When using this database, please be aware that it is based upon self-reported information submitted by facilities which has not been independently verified. It is unlikely that every facility responded to the survey and the database should not be expected to be a complete inventory of all facilities that were operating at that time. This database is maintained by the California State Water Resources Control Board's (SWRCB) Geotracker.

Government Publication Date: Aug 27, 2015

Aboveground Storage Tanks: AST

A statewide list from 2009 of aboveground storage tanks (ASTs) made available by the Cal FIRE Office of the State Fire Marshal (OSFM). This list is no longer maintained or updated by the Cal FIRE OSFM.

Government Publication Date: Aug 31, 2009

Delisted Storage Tanks: DELISTED TNK

This database contains a list of storage tank sites that were removed by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA) and the Cal FIRE Office of State Fire Marshal (OSFM).

Government Publication Date: May 1, 2019

California Environmental Reporting System (CERS) Tanks: CERS TANK

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: May 6, 2019

Site Mitigation and Brownfields Reuse Program Facility Sites with Land Use Restrictions: LUR

The Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents land use restrictions that are active. Some sites have multiple land use restrictions.

Government Publication Date: Mar 11, 2019

Hazardous Waste Management Program Facility Sites with Deed / Land Use Restrictions: HLUR

The Department of Toxic Substances Control (DTSC) Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Government Publication Date: Apr 17, 2019

Deed Restrictions and Land Use Restrictions: DEED

List of Deed Restrictions, Land Use Restrictions and Covenants in GeoTracker made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency. A deed restriction (land use covenant) may be required to facilitate the remediation of past environmental contamination and to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

Government Publication Date: Apr 17, 2019

Voluntary Cleanup Program: VCP

List of sites in the Voluntary Cleanup Program made available by the Department of Toxic Substances and Control (DTSC). The Voluntary Cleanup Program was designed to respond to lower priority sites. Under the Voluntary Cleanup Program, DTSC enters site-specific agreements with project proponents for DTSC oversight of site assessment, investigation, and/or removal or remediation activities, and the project proponents agree to pay DTSC's reasonable costs for those services.

Government Publication Date: Mar 11, 2019

GeoTracker Cleanup Program Sites: CLEANUP SITES

A list of Cleanup Program sites in the state of California made available by The State Water Resources Control Board (SWRCB) of the California Environmental Protection Agency (EPA). SWRCB tracks leaking underground storage tank cleanups as well as other water board cleanups.

Government Publication Date: Apr 17, 2019

Delisted California Environmental Reporting System (CERS) Tanks: DELISTED CTNK

This database contains a list of Aboveground Petroleum Storage and Underground Storage Tank sites that were removed from in the California Environmental Protection Agency (CalEPA) Regulated Site Portal.

Government Publication Date: May 6, 2019

Historical Hazardous Substance Storage Container Information - Facility Summary: HIST TANK

The State Water Resources Control Board maintained the Hazardous Substance Storage Containers listing and inventory in th 1980s. This facility summary lists historic tank sites where the following container types were present: farm motor vehicle fuel tanks; waste tanks; sumps; pits, ponds, lagoons, and others; and all other product tanks. This set, published in May 1988, lists facility and owner information, as well as the number of containers. This data is historic and will not be updated.

Government Publication Date: May 27, 1988

Tribal

Leaking Underground Storage Tanks (LUSTs) on Indian Lands: INDIAN LUST

LUSTs on Tribal/Indian Lands in Region 9, which includes California.

Government Publication Date: Dec 31, 2017

Underground Storage Tanks (USTs) on Indian Lands: INDIAN UST

USTs on Tribal/Indian Lands in Region 9, which includes California.

Government Publication Date: Dec 31, 2017

Delisted Tribal Leaking Storage Tanks: DELISTED ILST

Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.

Government Publication Date: Oct 14, 2017

Delisted Tribal Underground Storage Tanks: DELISTED IUST

Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.

Government Publication Date: Oct 14, 2017

County

Delisted County Records: DELISTED COUNTY

Records removed from county or CUPA databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.

Government Publication Date: Jun 18, 2019

Santa Clara County - City of San Jose Hazardous Material Facilities: SANJOSE HM

A list of facilities with hazardous materials, including underground and aboveground tanks. This list is maintained by the City of San Jose Fire Department.

Government Publication Date: Apr 28, 2019

Santa Clara County - Gilroy City CUPA Facilities List: GILROY CUPA

The Gilroy City Fire Marshal's office maintains a list of CUPA Facilities located in Gilroy City.

Government Publication Date: Jan 30, 2019

Santa Clara County - CUPA Facilities List: SANTACLARA CUPA

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Santa Clara County. This list is made available by Santa Clara County Department of Environmental health (DEH). DEH's Hazardous Materials Compliance Division (HMCD) is CUPA for the county with jurisdiction within the Cities of Los Altos Hills, Monte Sereno, and Saratoga; and in all unincorporated areas of Santa Clara County, including Moffett Field, San Martin, and Stanford.

Government Publication Date: Apr 16, 2019

Santa Clara County - Historic Solvent Case Listing: SANTACLARA HSOL

The Santa Clara Valley Water District was responsible for the oversight of solvent and toxic release cases and maintained a list of historic solvent cases in Santa Clara County.

Government Publication Date: Aug 22, 2016

Santa Clara County - Local Oversight Program Listing: SANTACLARA LO

A list of Leaking Underground Storage Tanks (LUST) facilities in Santa Clara County Provided by Santa Clara Department of Environmental Health (DEH). Since July 1, 2004 the DEH has served as the oversight agency for investigations and clean-up of petroleum releases from underground storage tanks through implementation of the Local Oversight Program (LOP) contract with the State Water Resources Control Board.

Government Publication Date: Jun 14, 2017

Santa Clara County - Sunnyvale City CUPA List: SUNNYVALE CUPA

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Sunnyvale City, Santa Clara County. This list is made available by the Fire Prevention & Hazardous Materials division of the Sunnyvale Department of Public Safety.

Government Publication Date: Apr 17, 2019

Additional Environmental Record Sources

Federal

Facility Registry Service/Facility Index: FINDS/FRS

The US Environmental Protection Agency (EPA)'s Facility Registry System (FRS) is a centrally managed database that identifies facilities, sites or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, data collected from EPA's Central Data Exchange registrations and data management personnel.

Government Publication Date: Apr 23, 2019

Toxics Release Inventory (TRI) Program: TRIS

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Dec 31, 2017

Hazardous Materials Information Reporting System: HMIRS

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Jan 8, 2019

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department") provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Jul 18, 2018

Toxic Substances Control Act: TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Jun 30, 2017

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP

Early in the cleanup process, the Environmental Protection Agency (EPA) conducts a search to find the potentially responsible parties (PRPs). EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site.

Government Publication Date: Dec 20, 2018

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS

The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.

Government Publication Date: Nov 18, 2016

Drycleaner Facilities: FED DRYCLEANERS

A list of drycleaner facilities from the Integrated Compliance Information System (ICIS). The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: May 29, 2018

Delisted Drycleaner Facilities: DELISTED FED DRY

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: May 29, 2018

Formerly Used Defense Sites: FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DoD) is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers.

Government Publication Date: Oct 23, 2018

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: Nov 1, 2018

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) contains mine identification numbers issued by the Department of Labor Mine Safety and Health Administration (MSHA) for mines active or opened since 1971. Note that addresses may or may not correspond with the physical location of the mine itself.

Government Publication Date: Nov 30, 2018

Alternative Fueling Stations: ALT FUELS

List of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE). The National Renewable Energy Laboratory (NREL) obtains information about new stations from trade media, Clean Cities coordinators, a Submit New Station form on the Station Locator website, and through collaborating with infrastructure equipment and fuel providers, original equipment manufacturers (OEMs), and industry groups.

Government Publication Date: Apr 8, 2019

Registered Pesticide Establishments: SSTS

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Sep 1, 2018

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Mar 20, 2019

State

Dry Cleaning Facilities: DRYCLEANERS

A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial, linen supply, commercial laundry, dry cleaning and pressing machines - Coin Operated Laundry and Dry Cleaning. This is provided by the Department of Toxic Substance Control.

Government Publication Date: Apr 16, 2019

Delisted Drycleaners: DELISTED DRYCLEANERS

Sites removed from the list of drycleaner related facilities that have EPA ID numbers, made available by the California Department of Toxic Substance Control.

Government Publication Date: Apr 16, 2019

Non-Toxic Dry Cleaning Incentive Program: DRYC GRANT

A list of grant recipients of the Non-Toxic Dry Cleaning Incentive Program made available by the California Air Resources Board (CARB). The program provides grants to eligible dry cleaning businesses to assist them in transitioning away from PERC machines to alternative non-toxic and non-smog forming technologies.

Government Publication Date: Feb 28, 2018

Hazardous Waste and Substances Site List - Site Cleanup: HWSS CLEANUP

The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites. This list is published by California Department of Toxic Substance Control.

Government Publication Date: Apr 23, 2019

List of Hazardous Waste Facilities Subject to Corrective Action: DTSC HWF

This is a list of hazardous waste facilities identified in Health and Safety Code (HSC) § 25187.5. These facilities are those where Department of Toxic Substances Control (DTSC) has taken or contracted for corrective action because a facility owner/operator has failed to comply with a date for taking corrective action in an order issued under HSC § 25187, or because DTSC determined that immediate corrective action was necessary to abate an imminent or substantial endangerment.

Government Publication Date: Jul 18, 2016

EnviroStor Inspection, Compliance, and Enforcement: INSP COMP ENF

A list of permitted facilities with inspections and enforcements tracked in the Department of Toxic Substance Control (DTSC) EnviroStor.

Government Publication Date: Apr 19, 2019

School Property Evaluation Program Sites: SCH

A list of sites registered with The Department of Toxic Substances Control (DTSC) School Property Evaluation and Cleanup (SPEC) Division. SPEC is responsible for assessing, investigating and cleaning up proposed school sites. The Division ensures that selected properties are free of contamination or, if the properties were previously contaminated, that they have been cleaned up to a level that protects the students and staff who will occupy the new school.

Government Publication Date: Mar 11, 2019

California Hazardous Material Incident Report System (CHMIRS): CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS). This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Apr 2, 2019

Hazardous Waste Manifest Data: HAZNET

A list of hazardous waste manifests received each year by Department of Toxic Substances Control (DTSC). The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Oct 24, 2016

Historical California Hazardous Material Incident Report System (CHMIRS): HIST CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS) prior to 1993. This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Jan 1, 1993

Historical Hazardous Waste Manifest Data: HIST MANIFEST

A list of historic hazardous waste manifests received by the Department of Toxic Substances Control (DTSC) from year the 1980 to 1992. The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Dec 31, 1992

Historical Cortese List: HIST CORTESE

List of sites which were once included on the Cortese list. The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements for providing information about the location of hazardous sites.

Government Publication Date: Nov 13, 2008

Cease and Desist Orders and Cleanup and Abatement Orders: CDO/CAO

The California Environment Protection Agency "Cortese List" of active Cease and Desist Orders (CDO) and Cleanup and Abatement Orders (CAO). This list contains many CDOs and CAOs that do NOT concern the discharge of wastes that are hazardous materials. Many of the listed orders concern, as examples, discharges of domestic sewage, food processing wastes, or sediment that do not contain hazardous materials, but the Water Boards' database does not distinguish between these types of orders.

Government Publication Date: Feb 16, 2012

California Environmental Reporting System (CERS) Hazardous Waste Sites: CERS HAZ

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: May 6, 2019

Delisted Environmental Reporting System (CERS) Hazardous Waste Sites: DELISTED HAZ

This database contains a list of sites that were removed from the California Environmental Protection Agency (CalEPA) in the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator.

Government Publication Date: Nov 29, 2018

Sites in GeoTracker: GEOTRACKER

GeoTracker is the State Water Resource Control Boards' data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater. This is a list of sites in GeoTracker that aren't otherwise categorized as LUST, Land Disposal Sites (LDS), Cleanup Sites, or sites having Waste Discharge Requirements (WDR). This listing includes program types such as Underground Injection Control (UIC), Confined Animal Facilities (CAF), Irrigated Lands Regulatory Program, plans, and non-case information.

Government Publication Date: Apr 17, 2019

Waste Discharge Requirements: WASTE DISCHG

List of sites in California State Water Resources Control Board (SWRCB) Waste Discharge Requirements (WDRs) Program in California, made available by the SWRCB via GeoTracker. The WDR program regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

Government Publication Date: Apr 10, 2019

Toxic Pollutant Emissions Facilities: EMISSIONS

A list of criteria and toxic pollutant emissions data for facilities in California made available by the California Environmental Protection Agency - Air Resources Board (ARB). Risk data may be based on previous inventory submittals. The toxics data are submitted to the ARB by the local air districts as requirement of the Air Toxics "Hot Spots" Program. This program requires emission inventory updates every four years.

Government Publication Date: Dec 31, 2017

Clandestine Drug Lab Sites: CDL

The Department of Toxic Substances Control (DTSC) maintains a listing of drug lab sites. DTSC is responsible for removal and disposal of hazardous substances discovered by law enforcement officials while investigating illegal/clandestine drug laboratories.

Government Publication Date: Dec 31, 2017

Tribal

No Tribal additional environmental record sources available for this State.

County

No County additional environmental databases were selected to be included in the search.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Appendix F

Noise Analysis

THE CROSSWINDS AT MORGAN HILL PROJECT
NOISE AND VIBRATION ASSESSMENT

Morgan Hill, California

April 26, 2022

Prepared for:

Amber Sharpe
Project Manager
David J. Powers & Associates, Inc.
1871 The Alameda, Suite 200
San José, CA 95126

Prepared by:

Acoustics • Air Quality
429 East Cotati Avenue
Cotati, CA 94931
(707) 794-0400

Project: 20-161

INTRODUCTION

The project proposes a residential development at the northwest corner of the Half Road and Mission View Drive intersection in Morgan Hill, California. The 31-acre project site consists of the Assessor's Parcel Numbers 728-30-001, 728-30-002, 728-30-003, and 728-30-004. The project site is mostly undeveloped and consists of grassland and boxed nursery trees. A vacant single-family residence constructed in the 1950s is located on the southwestern section of the site. The project proposes to construct a total of 269 new residential units: 56 single-family, 64 duets, and 149 condominiums. There would be a total of 40 below-market-rate (BMR) units. The project would provide 606 parking spaces, including 538 covered spaces and 68 uncovered spaces. The project site would be accessed via three vehicular connections: two site entries from DePaul Drive and one entry from Mission View Drive. DePaul Drive is proposed to be extended approximately 2,000 feet south along the project site's eastern frontage to provide direct access to the project site.

This report evaluates the project's potential to result in significant noise and vibration impacts with respect to applicable California Environmental Quality Act (CEQA) guidelines. The report is divided into three sections: 1) the Setting Section provides a brief description of the fundamentals of environmental noise and groundborne vibration, summarizes applicable regulatory criteria, and discusses the results of the ambient noise monitoring survey completed to document existing noise conditions; 2) the General Plan Consistency Section discusses land use compatibility utilizing policies in the City's General Plan; and, 3) the Impacts and Mitigation Measures Section describes the significance criteria used to evaluate project impacts, provides a discussion of each project impact, and presents measures, where necessary, to mitigate the impacts of the project on sensitive receptors in the vicinity.

SETTING

Fundamentals of Environmental Noise

Noise may be defined as unwanted sound. Noise is usually objectionable because it is disturbing or annoying. The objectionable nature of sound could be caused by its *pitch* or its *loudness*. *Pitch* is the height or depth of a tone or sound, depending on the relative rapidity (frequency) of the vibrations by which it is produced. Higher pitched signals sound louder to humans than sounds with a lower pitch. *Loudness* is intensity of sound waves combined with the reception characteristics of the ear. Intensity may be compared with the height of an ocean wave in that it is a measure of the amplitude of the sound wave.

In addition to the concepts of pitch and loudness, there are several noise measurement scales which are used to describe noise in a particular location. A *decibel (dB)* is a unit of measurement which indicates the relative amplitude of a sound. The zero on the decibel scale is based on the lowest sound level that the healthy, unimpaired human ear can detect. Sound levels in decibels are calculated on a logarithmic basis. An increase of 10 decibels represents a ten-fold increase in acoustic energy, while 20 decibels is 100 times more intense, 30 decibels is 1,000 times more intense, etc. There is a relationship between the subjective noisiness or loudness of a sound and its intensity. Each 10 decibel increase in sound level is perceived as approximately a doubling of loudness over a fairly wide range of intensities. Technical terms are defined in Table 1.

There are several methods of characterizing sound. The most common in California is the *A-weighted sound level (dBA).* This scale gives greater weight to the frequencies of sound to which the human ear is most sensitive. Representative outdoor and indoor noise levels in units of dBA are shown in Table 2. Because sound levels can vary markedly over a short period of time, a method for describing either the average character of the sound or the statistical behavior of the variations must be utilized. Most commonly, environmental sounds are described in terms of an average level that has the same acoustical energy as the summation of all the time-varying events. This *energy-equivalent sound/noise descriptor* is called L_{eq}. The most common averaging period is hourly, but L_{eq} can describe any series of noise events of arbitrary duration.

The scientific instrument used to measure noise is the sound level meter. Sound level meters can accurately measure environmental noise levels to within about plus or minus 1 dBA. Various computer models are used to predict environmental noise levels from sources, such as roadways and airports. The accuracy of the predicted models depends upon the distance the receptor is from the noise source. Close to the noise source, the models are accurate to within about plus or minus 1 to 2 dBA.

Since the sensitivity to noise increases during the evening and at night -- because excessive noise interferes with the ability to sleep -- 24-hour descriptors have been developed that incorporate artificial noise penalties added to quiet-time noise events. The *Community Noise Equivalent Level* (*CNEL*) is a measure of the cumulative noise exposure in a community, with a 5 dB penalty added to evening (7:00 pm - 10:00 pm) and a 10 dB addition to nocturnal (10:00 pm - 7:00 am) noise levels. The *Day/Night Average Sound Level* (L_{dn} or *DNL*) is essentially the same as CNEL, with the exception that the evening time period is dropped and all occurrences during this three-hour period are grouped into the daytime period.

Effects of Noise

Sleep and Speech Interference

The thresholds for speech interference indoors are about 45 dBA if the noise is steady and above 55 dBA if the noise is fluctuating. Outdoors the thresholds are about 15 dBA higher. Steady noises of sufficient intensity (above 35 dBA) and fluctuating noise levels above about 45 dBA have been shown to affect sleep. Interior residential standards for multi-family dwellings are set by the State of California at 45 dBA L_{dn}/CNEL. Typically, the highest steady traffic noise level during the daytime is about equal to the L_{dn}/CNEL and nighttime levels are 10 dBA lower. The standard is designed for sleep and speech protection and most jurisdictions apply the same criterion for all residential uses. Typical structural attenuation is 12-17 dBA with open windows. With closed windows in good condition, the noise attenuation factor is around 20 dBA for an older structure and 25 dBA for a newer dwelling. Sleep and speech interference is therefore possible when exterior noise levels are about 57-62 dBA L_{dn}/CNEL with open windows and 65-70 dBA L_{dn}/CNEL if the windows are closed. Levels of 55-60 dBA are common along collector streets and secondary arterials, while 65-70 dBA is a typical value for a primary/major arterial. Levels of 75-80 dBA are normal noise levels at the first row of development outside a freeway right-of-way. In order to achieve an acceptable interior noise environment, bedrooms facing secondary roadways need to

be able to have their windows closed; those facing major roadways and freeways typically need special glass windows.

Annoyance

Attitude surveys are used for measuring the annoyance felt in a community for noises intruding into homes or affecting outdoor activity areas. In these surveys, it was determined that the causes for annoyance include interference with speech, radio and television, house vibrations, and interference with sleep and rest. The L_{dn}/CNEL as a measure of noise has been found to provide a valid correlation of noise level and the percentage of people annoyed. People have been asked to judge the annoyance caused by aircraft noise and ground transportation noise. There continues to be disagreement about the relative annoyance of these different sources. When measuring the percentage of the population highly annoyed, the threshold for ground vehicle noise is about 50 dBA L_{dn}/CNEL. At a L_{dn}/CNEL of about 60 dBA, approximately 12 percent of the population is highly annoyed. When the L_{dn}/CNEL increases to 70 dBA, the percentage of the population highly annoyed increases to about 25-30 percent of the population. There is, therefore, an increase of about 2 percent per dBA between a L_{dn}/CNEL of 60-70 dBA. Between a L_{dn}/CNEL of 70-80 dBA, each decibel increase increases by about 3 percent the percentage of the population highly annoyed. People appear to respond more adversely to aircraft noise. When the L_{dn}/CNEL is 60 dBA, approximately 30-35 percent of the population is believed to be highly annoyed. Each decibel increase to 70 dBA adds about 3 percentage points to the number of people highly annoyed. Above 70 dBA, each decibel increase results in about a 4 percent increase in the percentage of the population highly annoyed.

Fundamentals of Groundborne Vibration

Ground vibration consists of rapidly fluctuating motions or waves with an average motion of zero. Several different methods are typically used to quantify vibration amplitude. One method is the Peak Particle Velocity (PPV). The PPV is defined as the maximum instantaneous positive or negative peak of the vibration wave. In this report, a PPV descriptor with units of mm/sec or in/sec is used to evaluate construction generated vibration for building damage and human complaints. Table 3 displays the reactions of people and the effects on buildings that continuous or frequent intermittent vibration levels produce. The guidelines in Table 3 represent syntheses of vibration criteria for human response and potential damage to buildings resulting from construction vibration.

Construction activities can cause vibration that varies in intensity depending on several factors. The use of pile driving and vibratory compaction equipment typically generates the highest construction related groundborne vibration levels. Because of the impulsive nature of such activities, the use of the PPV descriptor has been routinely used to measure and assess groundborne vibration and almost exclusively to assess the potential of vibration to cause damage and the degree of annoyance for humans.

The two primary concerns with construction-induced vibration, the potential to damage a structure and the potential to interfere with the enjoyment of life, are evaluated against different vibration limits. Human perception to vibration varies with the individual and is a function of physical

setting and the type of vibration. Persons exposed to elevated ambient vibration levels, such as people in an urban environment, may tolerate a higher vibration level.

Structural damage can be classified as cosmetic only, such as paint flaking or minimal extension of cracks in building surfaces; minor, including limited surface cracking; or major, that may threaten the structural integrity of the building. Safe vibration limits that can be applied to assess the potential for damaging a structure vary by researcher. The damage criteria presented in Table 3 include several categories for ancient, fragile, and historic structures, the types of structures most at risk to damage. Most buildings are included within the categories ranging from "Historic and some old buildings" to "Modern industrial/commercial buildings". Construction-induced vibration that can be detrimental to the building is very rare and has only been observed in instances where the structure is at a high state of disrepair and the construction activity occurs immediately adjacent to the structure.

The annoyance levels shown in Table 3 should be interpreted with care since vibration may be found to be annoying at lower levels than those shown, depending on the level of activity or the sensitivity of the individual. To sensitive individuals, vibrations approaching the threshold of perception can be annoying. Low-level vibrations frequently cause irritating secondary vibration, such as a slight rattling of windows, doors, or stacked dishes. The rattling sound can give rise to exaggerated vibration complaints, even though there is very little risk of actual structural damage.

TABLE 1 Definition of Acoustical Terms Used in this Report

Term	Definition
Decibel, dB	A unit describing, the amplitude of sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure. The reference pressure for air is 20 micro Pascals.
Sound Pressure Level	Sound pressure is the sound force per unit area, usually expressed in micro Pascals (or 20 micro Newtons per square meter), where 1 Pascal is the pressure resulting from a force of 1 Newton exerted over an area of 1 square meter. The sound pressure level is expressed in decibels as 20 times the logarithm to the base 10 of the ratio between the pressures exerted by the sound to a reference sound pressure (e.g., 20 micro Pascals). Sound pressure level is the quantity that is directly measured by a sound level meter.
Frequency, Hz	The number of complete pressure fluctuations per second above and below atmospheric pressure. Normal human hearing is between 20 Hz and 20,000 Hz. Infrasonic sound are below 20 Hz and Ultrasonic sounds are above 20,000 Hz.
A-Weighted Sound Level, dBA	The sound pressure level in decibels as measured on a sound level meter using the A-weighting filter network. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise.
Equivalent Noise Level, L_{eq}	The average A-weighted noise level during the measurement period.
L_{max}, L_{min}	The maximum and minimum A-weighted noise level during the measurement period.
L_{01}, L_{10}, L_{50}, L_{90}	The A-weighted noise levels that are exceeded 1%, 10%, 50%, and 90% of the time during the measurement period.
Day/Night Noise Level, L_{dn} or DNL	The average A-weighted noise level during a 24-hour day, obtained after addition of 10 decibels to levels measured in the night between 10:00 p.m. and 7:00 a.m.
Community Noise Equivalent Level, CNEL	The average A-weighted noise level during a 24-hour day, obtained after addition of 5 decibels in the evening from 7:00 p.m.to 10:00 p.m. and after addition of 10 decibels to sound levels measured in the night between 10:00 p.m. and 7:00 a.m.
Ambient Noise Level	The composite of noise from all sources near and far. The normal or existing level of environmental noise at a given location.
Intrusive	That noise which intrudes over and above the existing ambient noise at a given location. The relative intrusiveness of a sound depends upon its amplitude, duration, frequency, and time of occurrence and tonal or informational content as well as the prevailing ambient noise level.

TABLE 2 Typical Noise Levels in the Environment

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
	110 dBA	Rock band
Jet fly-over at 1,000 feet		
	100 dBA	
Gas lawn mower at 3 feet		
	90 dBA	
Diesel truck at 50 feet at 50 mph		Food blender at 3 feet
	80 dBA	Garbage disposal at 3 feet
Noisy urban area, daytime		
Gas lawn mower, 100 feet	70 dBA	Vacuum cleaner at 10 feet
Commercial area		Normal speech at 3 feet
Heavy traffic at 300 feet	60 dBA	
		Large business office
Quiet urban daytime	50 dBA	Dishwasher in next room
Quiet urban nighttime	40 dBA	Theater, large conference room
Quiet suburban nighttime		
	30 dBA	Library
Quiet rural nighttime		Bedroom at night, concert hall (background)
	20 dBA	
		Broadcast/recording studio
	10 dBA	
	0 dBA

TABLE 3 Reactions of People and Damage to Buildings from Continuous or Frequent Intermittent Vibration Levels

Velocity Level, PPV (in/sec)	Human Reaction	Effect on Buildings
0.01	Barely perceptible	No effect
0.04	Distinctly perceptible	Vibration unlikely to cause damage of any type to any structure
0.08	Distinctly perceptible to strongly perceptible	Recommended upper level of the vibration to which ruins and ancient monuments should be subjected
0.1	Strongly perceptible	Virtually no risk of damage to normal buildings
0.25	Strongly perceptible to severe	Threshold at which there is a risk of damage to historic and some old buildings.
0.3	Strongly perceptible to severe	Threshold at which there is a risk of damage to older residential dwellings such as plastered walls or ceilings
0.5	Severe - Vibrations considered unpleasant	Threshold at which there is a risk of damage to newer residential structures

Regulatory Background

The State of California and the City of Morgan Hill have established regulatory criteria that are applicable in this assessment. The CEQA Guidelines, Appendix G, are used to assess the potential significance of impacts pursuant to local General Plan policies, Municipal Code standards, or the applicable standards of other agencies. A summary of the applicable regulatory criteria is provided below.

State CEQA Guidelines. The CEQA contains guidelines to evaluate the significance of effects of environmental noise attributable to a proposed project. Under CEQA, noise impacts would be considered significant if the project would result in:

(a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local General Plan or Noise Ordinance, or applicable standards of other agencies;

(b) Generation of excessive groundborne vibration or groundborne noise levels; or

(c) For a project located within the vicinity of a private airstrip or an airport land use plan or where such a plan has not been adopted within two miles of a public airport or public use airport, if the project would expose people residing or working in the project area to excessive noise levels.

Pursuant to court decisions, the impacts of site constraints, such as exposure of the proposed project to excessive levels of noise and vibration, are not included in the Impacts and Mitigation Section of

this report. These items are discussed in a separate section addressing the project's consistency with the policies set forth in the City's General Plan.

2019 California Building Code, Title 24, Part 2. The current version of the California Building Code (CBC) requires interior noise levels attributable to exterior environmental noise sources to be limited to a level not exceeding 45 dBA L_{dn}/CNEL in any habitable room.

City of Morgan Hill General Plan. The Safety, Services and Infrastructure Chapter in the Morgan Hill 2035 General Plan sets forth policies with the goal of minimizing the impact of noise on people through noise reduction and suppression techniques, and through appropriate land use policies in the City of Morgan Hill. The following policies are applicable to the proposed project:

Policy SSI-8.1- *Exterior Noise Level Standards:* Require new development projects to be designed and constructed to meet acceptable exterior noise level standards (as shown in Table SSI-1) as follows:

- Apply a maximum exterior noise level of 60 dBA L_{dn} in residential areas where outdoor use is a major consideration (e.g., backyards in single-family housing developments and recreation areas in multi-family housing projects). Where the City determines that providing an L_{dn} of 60 dBA or lower cannot be achieved after the application of reasonable and feasible mitigation, an L_{dn} of 65 dBA may be permitted.

- Indoor noise levels should not exceed an L_{dn} of 45 dBA in new residential housing units.

- Noise levels in new residential development exposed to an exterior L_{dn} 60 dBA or greater should be limited to a maximum instantaneous noise level (e.g., trucks on busy streets, train warning whistles) in bedrooms of 50 dBA. Maximum instantaneous noise levels in all other habitable rooms should not exceed 55 dBA. The maximum outdoor noise level for new residences near the railroad shall be 70 dBA L_{dn}, recognizing that train noise is characterized by relatively few loud events.

Policy SSI-8.2- *Impact Evaluation:* The impact of proposed development project on existing land uses should be evaluated in terms of the potential for adverse community response based on significant increase in existing noise levels, regardless of compatibility guidelines.

Policy SSI-8.5- *Traffic Noise Level Standards:* Consider noise level increases resulting from traffic associated with new projects significant if: a) the noise level increase is 5 dBA L_{dn} or greater, with a future noise level of less than 60 dBA L_{dn}, or b) the noise level increase is 3 dBA L_{dn} or greater, with a future noise level of 60 dBA L_{dn} or greater.

Policy SSI-8.6- *Stationary Noise Level Standards:* Consider noise levels produced by stationary noise sources associated with new projects significant if they substantially exceed existing ambient noise levels.

Policy SSI-8.7- *Other Noise Sources:* Consider noise levels produced by other noise sources (such as ballfields) significant if an acoustical study demonstrates they would substantially exceed ambient noise levels.

Policy SSI-8.9- *Site Planning and Design:* Require attention to site planning and design techniques other than sound walls to reduce noise impacts, including: a) installing earth berms, b) increasing the distance between the noise source and the receiver; c) using non-sensitive structures such as parking lots, utility areas, and garages to shield noise-sensitive areas; d) orienting buildings to shield outdoor spaces from the noise source; and e) minimizing the noise at its source.

Policy SSI-9.1- *Techniques to Reduce Traffic Noise:* Use roadway design, traffic signalization, and other traffic planning techniques (such as limiting truck traffic in residential areas) to reduce noise caused by speed or acceleration of vehicles.

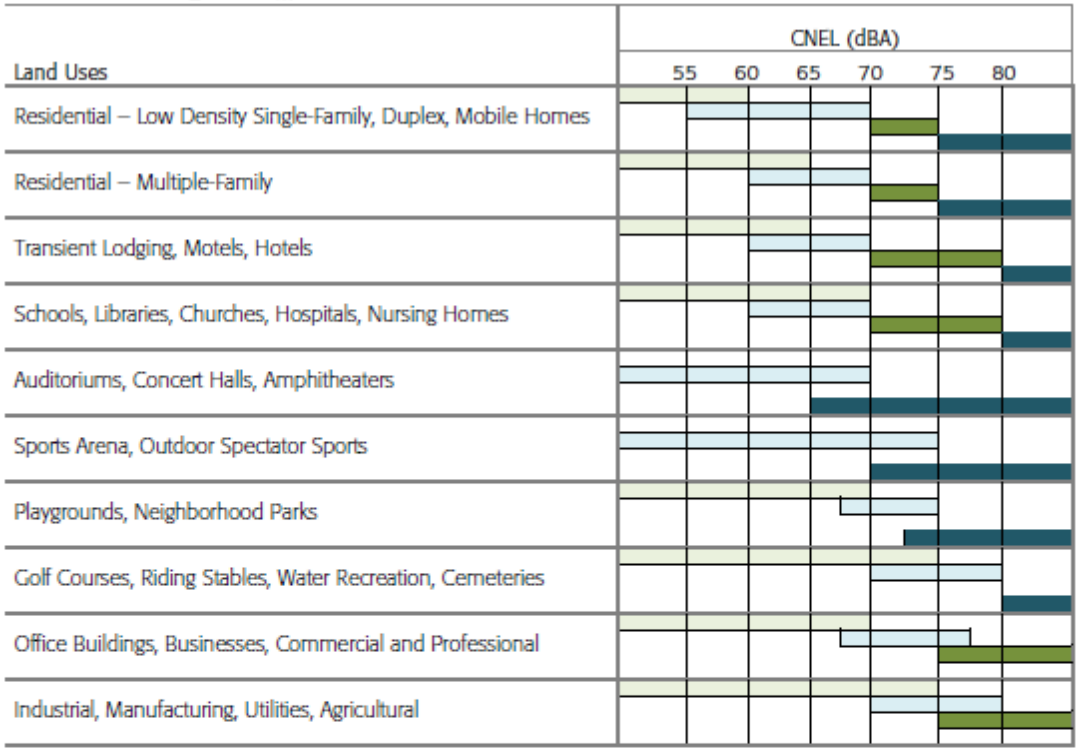
Policy SSI-9.3- *Sound Wall Design:* The maximum height of sound walls shall be eight feet. Residential projects adjacent to the freeway shall be designed to minimize sound wall height through location of a frontage road, use of two sound walls or other applicable measures. Sound wall design and location shall be coordinated for an entire project area and shall meet Caltrans noise attenuation criteria for a projected eight-lane freeway condition. If two sound walls are used, the first shall be located immediately adjacent to the freeway right-of-way and the second shall be located as necessary to meet Caltrans noise requirements for primary outdoor areas. The minimum rear yard setback to the second wall shall be 20 feet.

Policy SSI-9.5- *Noise Studies for Private Development:* In order to prevent significant noise impacts on neighborhood residents which are related to roadway extensions or construction of new roadways, require completion of a detailed noise study during project-level design to quantify noise levels generated by projects such as the Murphy Avenue extension to Mission View Drive and the Walnut Grove Extension to Diana Avenue. The study limits should include noise sensitive land uses adjacent to the project alignment as well as those along existing segments that would be connected to new segments. A significant impact would be identified where traffic noise levels would exceed the "normally acceptable" noise level standard for residential land uses and/or where ambient noise levels would be substantially increased with the project. Project specific mitigation measures could include, but not be limited to, considering the location of the planned roadway alignment relative to existing receivers in the vicinity, evaluating the use of noise barriers to attenuate project-generated traffic noise, and/or evaluating the use of "quiet pavement" to minimize traffic noise levels at the source. Mitigation should be designed to reduce noise levels into compliance with "normally acceptable" levels for residential noise and land use compatibility.

Policy SSI-9.6- *Earth Berms:* Allow and encourage earth berms in new development projects as an alternative to sound walls if adequate space is available.

Policy SSI-9.7- *Sound Barrier Design:* Require non-earthen sound barriers to be landscaped, vegetated, or otherwise designed and/or obscured to improve aesthetics and discourage graffiti and other vandalism.

TABLE SSI-1 STATE OF CALIFORNIA LAND USE COMPATIBILITY GUIDELINES FOR COMMUNITY NOISE ENVIRONMENTS



Normally Acceptable:
Specified land use is satisfactory based upon the assumption that any buildings involved are of normal conventional construction, without any special noise insulation requirements.

Conditionally Acceptable:
New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and the needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning will normally suffice.

Normally Unacceptable:
New construction or development should generally be discouraged. If new construction does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.

Clearly Unacceptable:
New construction or development generally should not be undertaken.

City of Morgan Hill Municipal Code. The City of Morgan Hill's Municipal Code Chapter 8.28 states that "It is unlawful and a misdemeanor for any person to make or continue, or cause to be made or continued, any loud, disturbing, unnecessary or unusual noise or any noise which annoys, disturbs, injures or endangers the comfort, health, repose, peace or safety of other persons within the city." The following sections of the code would be applicable to the project:

D. 1. Construction activities as limited below. "Construction activities" are defined as including but not limited to excavation, grading, paving, demolition, construction, alteration or repair of any building, site, street or highway, delivery or removal of construction material to a site, or movement of construction materials on a site. Construction activities are prohibited other than between the hours of seven a.m. and eight p.m., Monday through Friday and between the hours of nine a.m. to six p.m. on Saturday. Construction activities may not occur on Sundays or federal holidays. No third person, including but not limited to landowners, construction company owners, contractors, subcontractors, or employers, shall permit or allow any person working on construction activities which are under their ownership, control or direction to violate this provision. Construction activities may occur in the following cases without violation of this provision:

a. In the event of urgent necessity in the interests of the public health and safety, and then only with a permit from the chief building official, which permit may be granted for a period of not to exceed three days or less while the emergency continues and which permit may be renewed for periods of three days or less while the emergency continues.

b. If the chief building official determines that the public health and safety will not be impaired by the construction activities between the hours of eight p.m. and seven a.m., and that loss or inconvenience would result to any party in interest, the chief building official may grant permission for such work to be done between the hours of eight p.m. and seven a.m. upon an application being made at the time the permit for the work is issued or during the progress of the work.

c. The city council finds that construction by the resident of a single residence does not have the same magnitude or frequency of noise impacts as a larger construction project. Therefore, the resident of a single residence may perform construction activities on that home during the hours in this subsection, as well as on Sundays and federal holidays from nine a.m. to six p.m., provided that such activities are limited to the improvement or maintenance undertaken by the resident on a personal basis.

d. Public work projects are exempt from this section and the public works director shall determine the hours of construction for public works projects.

e. Until November 30, 1998, construction activities shall be permitted between the hours of ten a.m. to six p.m. on Sundays, subject to the following conditions. No power-driven vehicles, equipment or tools may be used during construction

activities, except on the interior of a building or other structure which is enclosed by exterior siding (including windows and doors) and roofing, and which windows and doors are closed during construction activities. Construction activities must be situated at least one hundred fifty feet from the nearest occupied dwelling. No delivery or removal of construction material to a site, or movement of construction materials on a site, is permitted. No activity, including but not limited to the playing of radios, tape players, compact disc players or other devices, which creates a loud or unusual noise which offends, disturbs or harasses the peace and quiet of the persons of ordinary sensibilities beyond the confines of the property from which the sound emanates is allowed.

2. If it is determined necessary in order to ensure compliance with this section, the chief building official may require fences, gates or other barriers prohibiting access to a construction site by construction crews during hours in which construction is prohibited by this subsection. The project manager of each project shall be responsible for ensuring the fences, gates or barriers are locked and/or in place during hours in which no construction is allowed. This subsection shall apply to construction sites other than public works projects or single dwelling units which are not a part of larger projects.

Existing Noise Environment

The 31-acre project site is located at the northwest corner of the Half Road and Mission View Drive intersection in Morgan Hill, California. The surrounding properties include the DePaul Health Center and a senior living center (north of the project site), Terra Mia at Mission Ranch Residential Subdivision and orchards (east of site, opposite Mission View Drive), commercial uses (north of site, opposite Cochrane Road), single-family residences and vacant land (south of site, opposite Half Road), and Live Oak High School (southeast of the site, opposite Half Road and Mission View Drive).

The noise environment at the site and in the surrounding area results primarily from vehicular traffic along US 101. Local traffic along Mission View Drive and Half Road also contribute to the existing noise environment. In addition, occasional aircraft flyovers associated with nearby San Martin Airport and San José International Airport have some contribution to the noise environment.

A noise monitoring survey consisting of two long-term (LT-1 and LT-2) and two short-term (ST-1 and ST-2) noise measurements was made for a previous project (Morgan Hill Technology Center), which included the proposed residential development. These measurements were made between Tuesday, April 9, 2019 and Thursday, April 11, 2019. All measurement locations are shown in Figure 1.

Long-term noise measurement LT-1 was made approximately 65 feet south of the centerline of Cochrane Road, just east of DePaul Drive. Hourly average noise levels at LT-1 typically ranged from 66 to 72 dBA L_{eq} during daytime hours (7:00 a.m. and 10:00 p.m.) and from 55 to 68 dBA L_{eq} during nighttime hours (10:00 p.m. and 7:00 a.m.). The day-night average noise level on

Wednesday, April 10, 2019 was 71 dBA L_{dn}. The daily trend in noise levels at LT-1 is shown in Figures 2 through 4.

LT-2 was made southeast of the Half Road/Condit Road intersection, approximately 400 feet east of the centerline of the nearest through lane along northbound US 101. Hourly average noise levels at LT-2 typically ranged from 66 to 71 dBA L_{eq} during daytime hours and from 61 to 71 dBA L_{eq} during nighttime hours. The day-night average noise level on Wednesday, April 10, 2019 was 73 dBA L_{dn}. The daily trend in noise levels at LT-2 is shown in Figures 5 through 7.

Short-term noise measurements were made on Tuesday, April 9, 2019 between 10:30 a.m. and 11:10 a.m. ST-1 was made in a single 10-minute interval, while ST-2 was made in two consecutive 10-minute intervals. The results of the measurements are summarized in Table 4.

Short-term noise measurement ST-1 was made from the sidewalk along Mission View Drive, approximately 35 feet from the centerline of the roadway. Passenger cars generated the majority of the noise at ST-1, with maximum instantaneous noise levels from vehicles ranging from 66 to 74 dBA. One jet flyover was also observed, producing a maximum instantaneous noise level of 61 dBA. The 10-minute L_{eq} measured at ST-1 was 64 dBA $L_{eq(10\text{-}min)}$. ST-2 was made at the end of DePaul Drive. During the first 10-minute interval, an emergency vehicle drove by, generating maximum instantaneous noise levels of 74 dBA. The siren from this vehicle contaminated the short-term measurement during this 10-minute period. To capture typical ambient noise levels, a second 10-minute measurement was made at this location. Typical vehicle pass-bys produced maximum instantaneous noise levels that ranged from 55 to 61 dBA, and jet flyovers were observed to generate maximum instantaneous noise levels ranging from 61 to 65 dBA. The 10-minute average noise levels measured at ST-2 ranged from 58 dBA $L_{eq(10\text{-}min)}$ without the emergency vehicle to 62 dBA $L_{eq(10\text{-}min)}$ with the emergency vehicle.

PLAN CONSISTENCY ANALYSIS

Noise and Land Use Compatibility Assessment

The future noise environment at the project site would continue to result primarily from traffic along US 101. The traffic study completed for the proposed project by *Hexagon Transportation Consultants* did not include future traffic volumes for US 101. To estimate the future noise increase at the project site, US 101 peak hour volumes from the Caltrans website[1] were used to estimate the noise level increase expected by the year 2035, assuming a typical 1% to 2% increase in traffic volumes each year. The future noise increase calculated along US 101 would be up to 2 dBA L_{dn} by the year 2035.

[1] http://www.dot.ca.gov/trafficops/census/docs/2016_aadt_volumes.pdf

Additionally, the project's traffic study included peak hour turning movements for local intersections surrounding the project site and throughout the City of Morgan Hill. Along with the projected 2035 peak hour volumes estimated for US 101, these traffic volumes were used as inputs in SoundPLAN, version 8.2, to estimate the worst-case scenario 2035 noise levels. SoundPLAN is a three-dimensional ray-tracing computer modeling program. Calculations in SoundPLAN accounted for the source of noise (traffic), the frequency spectra of the noise source, and the topography of the area. Posted traffic speed were used for each roadway. At a distance of 75 feet from the centerline of each roadway, the future exterior noise levels would be 65 dBA L_{dn} along DePaul Drive, 67 dBA L_{dn} along Mission View Road, and 67 dBA L_{dn} along Half Road.

Future Exterior Noise Environment

Policy SSI-8.1 and Table SSI-1 of the City's General Plan states that noise levels at outdoor use areas of residential land uses should be maintained at or below 60 dBA L_{dn} to be considered normally acceptable with the noise environment. The exterior noise standard would be applied at common outdoor use areas and private backyards, but the exterior noise standard would not be applied at small private decks or balconies that may be proposed by the project. For neighborhood parks and playgrounds, the exterior noise standard is 70 dBA L_{dn}.

The site plan indicates that the single-family detached homes along the eastern and southern boundaries of the project site and the duplexes located on the interior of the site would have privacy fences or barrier walls surrounding the private backyards. Each privacy fence was assumed to be continuous from grade to top, with no cracks or gaps, and be constructed from materials having a minimum surface density of three lbs/ft^2. While a height was not specified in the site plan, conservative heights of 6 feet were assumed for this analysis. These privacy fences were included as inputs to the SoundPLAN model, along with the proposed residential buildings.

The site plan shows several neighborhood parks and playground uses: a basketball court and activity area just east of the court along the western boundary, two smaller open space areas and a seating area along the northern boundary, an open space in the southeastern corner, and an open space and playground at the center of the site. A receptor was positioned at the center of each of these spaces. Along the western boundary, future exterior noise levels at the basketball court and activity area would be 66 to 67 dBA L_{dn}. The two smaller open space areas and the seating area along the northern boundary would be partially shielded from surrounding traffic noise by intervening project buildings. At the center of these spaces, the future exterior noise levels would range from below 60 to 62 dBA L_{dn}. The open space at the southeastern corner of the project site would have direct line-of-sight to traffic noise along both Mission View Drive and Half Road, with future exterior noise levels up to 70 dBA L_{dn} at the center of the space. The open space and playground located at the center of the project site would be partially shielded from the surrounding project buildings. At the center of these spaces, the future exterior noise levels would be 61 dBA L_{dn}. All neighborhood parks and playground uses proposed by the project would meet the City's exterior noise thresholds and would not require additional attenuation.

The backyards of the single-family detached homes located adjacent to the surrounding roadways would have the most exposure to traffic noise. Due to the orientation of the residences, there would be additional attenuation from the buildings at most of the backyards; however, some backyards

would be facing the roadways, such as units 55 and 56 in the southwestern corner of the project site. With a 6-foot privacy fence, the future exterior noise levels at the centers of these backyards would be 65 dBA L_{dn}. The backyards of units 43 through 53, which are located along the southern boundary would have future exterior noise levels at or below 60 dBA L_{dn}, assuming privacy fences of 6 feet tall. The backyards of units 41 and 42 would also have less shielding. At the centers of these backyards, the future exterior noise levels would be 61 and 60 dBA L_{dn}, respectively. Along the eastern boundary, the backyards of units 1 through 40 would be approximately 95 to 145 feet from the centerline of Mission View Drive with partial shielding from the residences and the privacy fences. At these distances and with the partial shielding, future exterior noise levels would be at or below 60 dBA L_{dn}.

All duplexes are located along the interior of the site. The backyards of these units would be surrounded by privacy fences, as well as the surrounding residential structures. With the partial shielding and location of these units, the future exterior noise levels at the center of these backyards would be at or below 60 dBA L_{dn}.

The three-story condominiums are attached buildings along the western boundary of the project site. The orientation of these buildings shows garage access on one side of the building and the front door access on the other. While there is open area between the buildings, these open spaces would be the location of the front door access walkways and would not be considered common outdoor use areas subject to the exterior noise thresholds established by the City. These buildings would not include outdoor use areas.

At the center of the project, there is also a common use pool area. While the site plan does show the pool area to include a fence surrounding the space, this fence is not assumed to be solid and would not provide attenuation. At the center of this outdoor use area, the future exterior noise levels would be 61 dBA L_{dn}.

The proposed neighborhood parks and playground areas would be compatible with the City's noise thresholds. With the inclusion of 6-foot privacy fences, the backyards for the single-family detached units would be compatible with the City's noise thresholds for all units except 41, 55, and 56. The backyards of the duplex units would be compatible with the City's thresholds. The exterior noise levels at the common use pool would exceed the City's 60 dBA L_{dn} standard. Backyards of units 41, 55, and 56 and the common use pool area would require noise control measures to meet the 60 dBA L_{dn} threshold. Alternatively, the City could permit the project to be constructed without additional attenuation under a conditionally acceptable condition. The backyards of the three units and the pool area at which the normally threshold is exceeded would meet the conditionally acceptable threshold established in the City's General Plan. Since the majority of the outdoor use areas at the project site do meet the normally acceptable threshold, the City could provide conditionally acceptable permission for the project.

Recommended Measures to Reduce Exterior Noise Levels

Methods available to reduce exterior noise levels include site planning alternatives (e.g., increased setbacks and using the proposed buildings as noise barriers), the construction of traditional noise barriers, or a combination of the above. For the proposed project, orienting residential units 41,

55, and 56 to face the opposite direction would help to provide additional shielding by project buildings. This would further reduce exterior noise levels. Assuming this option is not feasible, the optimal solution would be to construct privacy fences taller than 6 feet.

Eight-foot tall privacy fences were modeled in SoundPLAN for the backyards of units 41, 55, and 56. At unit 41, the 8-foot tall fence would reduce exterior noise levels to at or below 60 dBA L_{dn}. However, the 8-foot tall fence would reduce exterior noise levels to 62 dBA L_{dn} at units 55 and 56, which would still exceed the City's threshold of 60 dBA L_{dn}. Assuming a privacy fence of 10-feet tall, the exterior noise levels at units 55 and 56 would be reduced to 60 dBA L_{dn}. Therefore, the backyard fences at unit 41 would need to be a minimum height of 8 feet to meet the City's threshold, and the backyard fences at units 55 and 56 would need to be a minimum height of 10 feet to meet the City's threshold.

For the pool area, positioning additional project buildings to the west of the outdoor use area would provide additional attenuation, but assuming this would not be feasible, constructing a solid fence or barrier along the western boundary of the pool area (or completely surrounding the pool area) would be recommended to reduce exterior noise levels. The barrier shall be continuous from grade to top, with no cracks or gaps, and be constructed from materials having a minimum surface density of three lbs/ft^2. With a western barrier of minimum height of 5 feet, future exterior noise levels at the pool area would be at or below 60 dBA L_{dn}.

With the implementation of an 8-foot privacy fence at unit 41, a 10-foot privacy fence at units 55 and 56, and a 5-foot western barrier at the pool area, the City's normally acceptable threshold of 60 dBA L_{dn} for residential uses would be achieved at the center of each outdoor use area. The final recommendations shall be confirmed when detailed site plans and grading plans are available.

Future Interior Noise Environment

A noise standard of 45 dBA L_{dn} would apply to residential interiors.

Standard residential construction provides approximately 15 dBA of exterior-to-interior noise reduction, assuming the windows are partially open for ventilation. Standard construction with the windows closed provides approximately 20 to 25 dBA of noise reduction in interior spaces. Where exterior noise levels range from 60 to 65 dBA L_{dn}, the inclusion of adequate forced-air mechanical ventilation is often the method selected to reduce interior noise levels to acceptable levels by closing the windows to control noise. Where noise levels exceed 65 dBA L_{dn}, forced-air mechanical ventilation systems and sound-rated construction methods are normally required. Such methods or materials may include a combination of smaller window and door sizes as a percentage of the total building façade facing the noise source, sound-rated windows and doors, sound-rated exterior wall assemblies, and mechanical ventilation so windows may be kept closed at the occupant's discretion.

The condominium buildings G through W are located along the western boundary of the project site, with western façades ranging from 75 to 100 feet from the centerline of DePaul Drive. At these distances, rooms facing DePaul Drive and US 101 would be exposed to future exterior noise levels ranging from 67 to 72 dBA L_{dn}. The northern and southern façades of these buildings would

be partially shielded by the adjacent buildings. Rooms along these façades would be exposed to future exterior noise levels ranging from 63 to 69 dBA L_{dn}.

Single-family detached residences 55 and 56 are located in the southwestern corner of the project site, adjacent to DePaul Drive and Half Road. While first-floor rooms in the rear of the residence would be partially shielded by the privacy fence, rooms in the upper level and along the other façades of the structure would have direct line-of-sight to the roadways. With setbacks of 55 feet from the centerline of DePaul Drive, rooms along the western façades of residences 55 and 56 would be exposed to future exterior noise levels ranging from 66 to 72 dBA L_{dn}. With a setback of 70 feet from the centerline of Half Road, rooms along the southern façade of residence 56 would be exposed to future exterior noise levels of 69 dBA L_{dn}.

Along the southern boundary of the site, residential units 41 through 54 would have setbacks of about 75 to 170 feet from the centerline of Half Road. The southern façades of the residences adjacent to Half Road would have direct line-of-sight (units 41, 44, 45, 48, 49, 52, and 53), while the buildings set back one row would have partial shielding from the intervening residences (units 42, 43, 46, 47, 50, 51, and 54). The rooms along the southern façades facing Half Road would be exposed to future exterior noise levels of 68 to 69 dBA L_{dn}. Additionally, units 41 and 42 have direct line-of-sight to Mission View Drive, with setbacks of approximately 265 to 275 feet from the centerline of the roadway. Rooms located along the eastern façades of units 41 and 42 would be exposed to future exterior noise levels of 63 to 66 dBA L_{dn}.

The residences along the eastern boundary of the project site (units 1, 4, 5, 8, 9, 12, 13, 16, 17, 20, 21, 24, 25, 28, 29, 32, 33, 36, 37, and 40) have direct line-of-sight to Mission View Drive, while the second row of residences along the eastern boundary (units 2, 3, 6, 7, 10, 11, 14, 15, 18, 19, 22, 23, 26, 27, 30, 31, 34, 35, 38, and 39) would be partially shielded from the roadway by the intervening buildings. The eastern façades of the residences facing Mission View Drive (units 1, 4, 5, 8, 9, 12, 13, 16, 17, 20, 21, 24, 25, 28, 29, 32, 33, 36, 37, and 40) would have setbacks ranging from 75 to 85 feet from the centerline of the roadway. Rooms along these façades would be exposed to future exterior noise levels of 68 to 70 dBA L_{dn}. The second row units would be exposed to future exterior noise levels of 63 to 66 dBA L_{dn}. Additionally, units 39 and 40 have direct line-of-sight to Half Road, with setbacks of approximately 130 to 140 feet from the centerline of Half Road. Rooms located along the southern façades of units 39 and 40 would be exposed to future exterior noise levels of 66 to 67 dBA L_{dn}.

The condominium buildings located along the northern boundary of the site (buildings A, B, E, and F) would have some direct line-of-sight to Half Road and Mission View Drive. The exterior-racing façades of building A would be exposed to future exterior noise levels ranging from 60 to 62 dBA L_{dn}. The exterior-racing façades of buildings B and E would be exposed to future exterior noise levels at or below 60 dBA L_{dn}. The exterior-racing façades of building F would be exposed to future exterior noise levels ranging from below 60 dBA L_{dn} along the eastern façade to 67 dBA L_{dn} along the western façade.

Assuming a 15 dBA exterior-to-interior noise reduction, future interior noise levels would be up to 57 dBA L_{dn} along DePaul Drive, up to 54 dBA L_{dn} along Half Road, and up to 55 dBA L_{dn} along

Mission View Drive. These interior noise levels would exceed the 45 dBA L_{dn} threshold and would require noise insulation features.

Noise Insulation Features to Reduce Future Interior Noise Levels

The following noise insulation features shall be incorporated into the proposed project to reduce interior noise levels to 45 dBA L_{dn} or less:

- Preliminary calculations indicate that residential units nearest to DePaul Drive along the western boundary of the project site, adjacent to DePaul Drive (single-family residential units 55 and 56 and condominium units within 150 feet of the centerline of the roadway), would require windows and doors with a minimum rating of 31 STC with adequate forced-air mechanical ventilation to meet the interior noise threshold of 45 dBA L_{dn}. For the condominium units beyond 150 feet, the minimum STC rating for windows and doors would be 28.

- The first row of residential units located along the southern boundary of the project site, adjacent to Half Road (units 41, 44, 45, 48, 49, 52, and 53), would require windows and doors with minimum STC ratings of 30 with the incorporation of suitable forced-air mechanical ventilation to meet the City's 45 dBA L_{dn} threshold. The second row of residences (units 42, 43, 46, 47, 50, 51, and 54) would require the incorporation of suitable forced-air mechanical ventilation with standard construction materials to meet the City's interior noise threshold.

- The first row of residential units located along the eastern boundary of the project site, adjacent to Mission View Drive (units 1, 4, 5, 8, 9, 12, 13, 16, 17, 20, 21, 24, 25, 28, 29, 32, 33, 36, 37, and 40), and the second row residential unit 39 would require windows and doors with minimum STC ratings of 30 with the incorporation of suitable forced-air mechanical ventilation to meet the City's 45 dBA L_{dn} threshold. The second row of residences (units 2, 3, 6, 7, 10, 11, 14, 15, 18, 19, 22, 23, 26, 27, 30, 31, 34, 35, and 38) would require windows and doors with minimum STC ratings of 28 with the incorporation of suitable forced-air mechanical ventilation to meet the City's interior noise threshold.

- Building F along the northern boundary would require windows and doors with minimum STC ratings of 28 with the incorporation of suitable forced-air mechanical ventilation to meet the City's 45 dBA L_{dn} threshold. Buildings A and E along the northern boundary would satisfy the interior noise threshold with the incorporation of suitable forced-air mechanical ventilation and standard construction materials.

- Residential structures on the interior of the site would require a suitable form of forced-air mechanical ventilation, as determined by the local building official, with standard construction materials to achieve the interior noise standards.

The implementation of these noise insulation features would reduce interior noise levels to 45 dBA L_{dn} or less.

NOISE IMPACTS AND MITIGATION MEASURES

Significance Criteria

The following criteria were used to evaluate the significance of environmental noise resulting from the project:

- A significant noise impact would be identified if the project would generate a substantial temporary or permanent noise level increase over ambient noise levels at existing noise-sensitive receptors surrounding the project site and that would exceed applicable noise standards presented in the General Plan or Municipal Code at existing noise-sensitive receptors surrounding the project site.

    - Hourly average noise levels during construction that would exceed 60 dBA L_{eq} at residential land uses or exceed 70 dBA L_{eq} at commercial land uses and exceed the ambient noise environment by at least 5 dBA L_{eq} for a period of more than one year would constitute a significant temporary noise increase in the project vicinity.

    - A significant permanent noise level increase would occur if project-generated traffic would result in: a) a noise level increase of more than 3 dBA L_{dn} and the total day-night average noise level exceeding the "normally acceptable" category at an existing noise environment meeting the "normally acceptable" threshold; b) a noise level increase of more than 5 dBA L_{dn} and the total day-night average noise level remains "normally acceptable" at an existing noise environment meeting the "normally acceptable" threshold; c) a noise level increase of more than 3 dBA L_{dn} at a "conditionally acceptable" existing noise environment; or d) a noise level increase of more than 3 dBA L_{dn} at an "unacceptable" existing noise environment.

    - A significant noise impact would be identified if the project would expose persons to or generate noise levels that would exceed applicable noise standards presented in the General Plan or Municipal Code.

- A significant impact would be identified if the construction of the project would generate excessive vibration levels surrounding receptors. Groundborne vibration levels exceeding 0.3 in/sec PPV would have the potential to result in cosmetic damage to normal buildings.

- A significant noise impact would be identified if the project would expose people residing or working in the project area to excessive noise levels.

Impact 1a: **Temporary Construction Noise.** Existing noise-sensitive land uses would be exposed to a temporary increase in ambient noise levels due to project construction activities. The incorporation of construction best management practices as part of the project's Noise Control Plan would result in a **less-than-significant** temporary noise impact.

Noise impacts resulting from construction depend upon the noise generated by various pieces of construction equipment, the timing and duration of noise-generating activities, and the distance

between construction noise sources and noise-sensitive areas. Construction noise impacts primarily result when construction activities occur during noise-sensitive times of the day (e.g., early morning, evening, or nighttime hours), the construction occurs in areas immediately adjoining noise-sensitive land uses, or when construction lasts over extended periods of time. The proposed project would not require pile driving, which can cause excessive noise.

Chapter 8.28 of the City of Morgan Hill's Municipal Code establishes allowable hours of construction between 7:00 a.m. and 8:00 p.m., Monday through Friday, and between the hours of 9:00 a.m. to 6:00 p.m. on Saturday. Construction activities may not occur on Sundays or federal holidays. Construction for the proposed project is anticipated to take place during these allowable hours.

While noise thresholds for temporary construction are not provided in the City's General Plan or Municipal Code, the Fundamentals section of this report provides a threshold of 45 dBA for speech interference indoors. Assuming a 15 dBA exterior-to-interior reduction for standard residential construction and 25 dBA exterior-to-interior reduction for standard commercial, this would correlate to an exterior threshold of 60 dBA L_{eq} at residential land uses and 70 dBA L_{eq} at commercial land uses. Additionally, temporary construction would be annoying to surrounding land uses if the ambient noise environment increased by at least 5 dBA L_{eq} for an extended period of time. Therefore, the temporary construction noise impact would be considered significant if project construction activities produced noise levels exceeding 60 dBA L_{eq} at residential land uses or 70 dBA L_{eq} at commercial land uses and the ambient noise environment by 5 dBA L_{eq} or more for a period longer than one year at surrounding receptors.

For the residences located to the east of the project site, opposite Mission View Drive, and southeast of the site, opposite Mission View Drive and Half Road, daytime ambient noise levels would be represented by ST-1, which was 64 dBA L_{eq}. The ambient noise environment for the existing residences along US 101 to the southwest of the site, opposite Half Road, would be represented by measurements made at LT-2, which ranged from 66 to 71 dBA L_{eq} during daytime hours. LT-1 would represent the ambient noise environment for the medical facility to the north of the project site. The daytime ambient noise levels at these uses would range from 66 to 72 dBA L_{eq}.

The typical range of maximum instantaneous noise levels for the proposed project would be 70 to 90 dBA L_{max} at a distance of 50 feet (see Table 5). Table 6 shows typical hourly average construction-generated noise levels measured at a distance of 50 feet from the center of the site during busy construction periods (e.g., earth moving equipment, impact tools, etc.). As shown in Table 6, typical residential developments generate construction noise levels ranging from 72 to 88 dBA L_{eq} at a distance of 50 feet from the center of the active site. Construction-generated noise levels drop off at a rate of about 6 dBA per doubling of the distance between the source and receptor. Shielding by buildings or terrain often result in lower construction noise levels at distant receptors; however, for purposes of assessing a worst-case scenario, construction noise levels in this report are estimated assuming no attenuation due to intervening buildings.

Construction activities for the proposed project would be completed in stages. During each stage of construction, there would be a different mix of equipment operating, and noise levels would

vary by stage and vary within stages, based on the amount of equipment in operation and the location at which the equipment is operating. Demolition, site preparation, and grading/excavation for the proposed project shall be completed for the entire project site. However, the trenching and exterior and interior building construction shall be completed in three phases, which are identified in Figure 8. Equipment expected to be used in each construction stage are summarized in Table 7, along with the quantity of each piece of equipment. For the purposes of assuming worst-case conditions, all pieces of equipment shown per stage are assumed to be operating simultaneously. Note that the number of excavators proposed in the trenching stages for each phase was 1.5; however, for purposes of worst-case conditions, 2 excavators were assumed for modeling purposes.

In addition to the residential development phases, the proposed project includes the construction of the DePaul Drive extension, which would continue south along the western boundary of the project site, ending in a cul-de-sac just north of Half Road. Table 7 also shows the stages and equipment to be used during the construction of the roadway extension. Note, these stages would overlap with the residential development; however, the construction site for the roadway extension would not be located on the project site and therefore would have different distances to the off-site receptors.

FHWA's Roadway Construction Noise Model (RCNM) was used to calculate the hourly average noise levels for each stage of construction, assuming every piece of equipment would operate simultaneously, which would represent the worst-case scenario. Based on the hourly average noise levels calculated with RCNM, construction noise levels for each construction stage was estimated at a distance of 50 feet from the center of the active construction site and are shown in Table 7. Construction noise levels shown do not assume shielding from potential intervening buildings or temporary or permanent sound walls.

Table 8 summarizes the construction noise levels propagated from the center of the active construction site to the nearest property line of the surrounding land uses, except for the medical center and the high school. Noise levels at these existing land uses were calculated at the nearest noise-sensitive outdoor areas where extensive use would occur. For the stages occurring on the entire project site, the center of the active construction site was positioned at the geometrical center of the entire site, while the center of the active construction site would be positioned at the geometrical center of the specific phase, as shown in Figure 8. The DePaul extension construction source location was positioned at the centerline of the roadway along the alignment nearest to each specific receptor.

Additionally, an offsite sewer line would be constructed as part of the proposed project. This sewer line would be constructed during the grading/excavation phase of the project and would run along the north side of Half Road and the east side of Condit Road, connecting to the existing sewer line at East Main Avenue. Total construction of the sewer line would last 18 days. The only existing residences that would be subject to noise from the construction of the offsite sewer line would be the single-family residences located west of Condit Road near the Half Road intersection, approximately 25 feet or more from the work area. However, due to the close proximity of Highway 101 and the short duration of the sewer line construction, noise levels due to the offsite

sewer construction would not substantially increase over those noise level shown in the tables for the grading/excavation phase of the project.

An alternative construction method, which includes underground water tanks, may potentially be used for this project. This work would be completed by hand, as they are modular systems, during the grading/excavation phase. With this approach, the number of work days for this phase would increase to 18 days, and the total time of construction would increase by 16 days. Additionally, the grading/excavation phase would include one additional excavator. As shown in the table below, this alternative would result in up to a 1 dBA increase during this phase of construction.

TABLE 5 Construction Equipment, 50-foot Noise Emission Limits

Equipment Category	L_{max} Level (dBA)[1,2]	Impact/Continuous
Arc Welder	73	Continuous

FIGURE 8 Construction Phasing for the Proposed Project

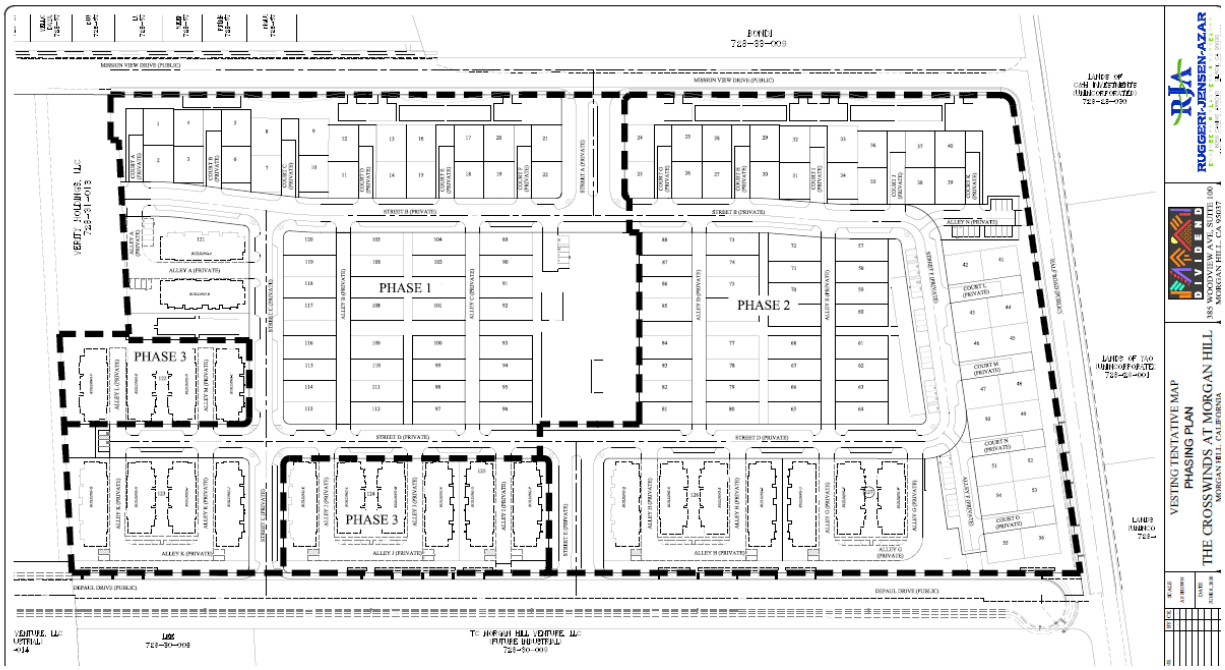

TABLE 7 Estimated Construction Noise Levels during the Construction of the Proposed Residential Development

Stage of Construction	Time Duration	Construction Equipment (Quantity)	Calculated Hourly Average Noise Levels at 50 feet
Demolition (full site)	4 days	Excavator (1)	77 dBA L_{eq}
Site Preparation (full site)	5 days	Grader (1) Scraper (3)	86 dBA L_{eq}
Grading/ Excavating (full site)	15 days 18 days[e]	Excavator (1)[e] Grader (1) Scraper (3) Tractor/Loader/Backhoe (1) Compactor (1)	87 dBA L_{eq}[f]
Trenching – Underground (Phase 1)	35 days	Tractor/Loader/Backhoe (1) Excavator (1.5[a])	83 dBA L_{eq}
Building Exterior (Phase 1)	175 days	Forklift (1) Tractor/Loader/Backhoe (1)	80 to 85 dBA L_{eq}[b]
Building Interior (Phase 1)	40 days	Air Compressor (4) Paving Equipment (1) Roller (1) Grader (1)	86 to 87 dBA L_{eq}[c]
Paving (Phase 1)	16 days	Cement and Mortar Mixer (2) Paver (1) Paving Equipment (1) Roller (1) Tractor/Loader/Backhoe (2) Grader (2)	88 to 91 dBA L_{eq}[d]
Trenching – Underground (Phase 2)	35 days	Tractor/Loader/Backhoe (1) Excavator (1.5[a])	83 dBA L_{eq}

Stage of Construction	Time Duration	Construction Equipment (Quantity)	Calculated Hourly Average Noise Levels at 50 feet
Building Exterior (Phase 2)	175 days	Forklift (1) Tractor/Loader/Backhoe (1)	80 dBA L_{eq}
Building Interior (Phase 2)	40 days	Air Compressor (5) Paving Equipment (1) Roller (1) Grader (1)	86 to 87 dBA L_{eq}[c]
Paving (Phase 2)	16 days	Cement and Mortar Mixer (2) Paver (1) Paving Equipment (1) Roller (1) Tractor/Loader/Backhoe (2) Grader (2)	88 to 91 dBA L_{eq}[d]
Trenching – Underground (Phase 3)	25 days	Tractor/Loader/Backhoe (1) Excavator (1.5[a])	83 dBA L_{eq}
Building Exterior (Phase 3)	75 days	Forklift (1) Tractor/Loader/Backhoe (1)	80 dBA L_{eq}
Building Interior (Phase 3)	40 days	Air Compressor (5) Paving Equipment (1) Roller (1) Grader (1)	86 to 87 dBA L_{eq}[c]
Paving (Phase 3)	12 days	Cement and Mortar Mixer (2) Paver (1) Paving Equipment (1) Roller (1) Tractor/Loader/Backhoe (2) Grader (2)	88 to 91 dBA L_{eq}[d]
Grading/ Excavating (DePaul Drive Extension)	15 days	Grader (1) Scraper (1) Tractor/Loader/Backhoe (1) Compactor (1)	86 dBA L_{eq}
Trenching – Underground (DePaul Drive Extension)	35 days	Tractor/Loader/Backhoe (1) Excavator (1.5[a])	83 dBA L_{eq}
Paving (DePaul Drive Extension)	16 days	Cement and Mortar Mixer (2) Paver (1) Paving Equipment (1) Roller (1) Tractor/Loader/Backhoe (2) Grader (2)	88 dBA L_{eq}

[a] List of equipment provided at the time of this study proposed 1.5 excavators; however, for purposes of modeling the worst-case scenario, 2 excavators were assumed in this analysis.
[b] Range of estimated noise levels represent the equipment for the building exterior stage of Phase 1 alone and during the overlapping period with the trenching stage of Phase 1.
[c] Range of estimated noise levels represent the equipment for the building interior stage alone of each phase and during the overlapping period with the building exterior stage.
[d] Range of estimated noise levels represent the equipment for the paving stage along of each phase and during the overlapping period with the building exterior and interior stages.
[e] Changes to grading/excavation would occur during the construction alternative only.
[f] The additional excavator in the grading/excavation would result in an increase of 1 dBA.

[a] Range of estimated noise levels represent the equipment for the building exterior stage of Phase 1 alone and during the overlapping period with the trenching stage of Phase 1.
[b] Range of estimated noise levels represent the equipment for the building interior stage alone of each phase and during the overlapping period with the building exterior stage.
[c] Range of estimated noise levels represent the equipment for the paving stage along of each phase and during the overlapping period with the building exterior and interior stages of each phase.
[d] The additional excavator in the grading/excavation would result in an increase of 1 dBA.

When construction activities occur near noise-sensitive receptors surrounding the site, construction noise levels would potentially exceed 60 dBA L_{eq} at nearby residences or 70 dBA L_{eq} at nearby commercial uses and exceed existing ambient conditions by 5 dBA L_{eq} or more. According to Table 8, construction noise levels during the majority of project construction would not exceed ambient conditions by more than 5 dBA L_{eq}. Therefore, extended exposure to excessive construction noise at the nearest noise-sensitive receptors would be minimal.

Reasonable regulation of the hours of construction, as well as regulation of the arrival and operation of heavy equipment and the delivery of construction material, are necessary to protect the health and safety of persons, promote the general welfare of the community, and maintain the quality of life. Construction activities will be conducted in accordance with the provisions of the City's General Plan and the Municipal Code, which limits temporary construction work to between the hours of 7:00 a.m. and 8:00 p.m. Monday through Friday and between 9:00 a.m. to 6:00 p.m. on Saturday. Construction is prohibited on Sundays and federal holidays. Further, the City shall require the construction crew to adhere to the following construction best management practices to reduce construction noise levels emanating from the site and minimize disruption and annoyance at existing noise-sensitive receptors in the project vicinity.

Construction Best Management Practices

Develop a construction noise control plan, including, but not limited to, the following construction best management controls:

- Equipment and trucks used for construction shall use the best available noise control techniques (e.g., improved mufflers, equipment redesign, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds);

- Impact tools (e.g., jackhammers, pavement breakers, and rock drills) used for construction shall be hydraulically or electrically powered wherever possible to avoid noise associated with compressed air exhaust from pneumatically powered tools; and

- Stationary noise sources shall be located as far from adjacent receptors as possible, and they shall be muffled and enclosed within temporary sheds, incorporate insulation barriers, or include other measures.

- Construct temporary noise barriers, where feasible, to screen stationary noise-generating equipment. Temporary noise barrier fences would provide a 5 dBA noise reduction if the noise barrier interrupts the line-of-sight between the noise source and receptor and if the barrier is constructed in a manner that eliminates any cracks or gaps.

- Unnecessary idling of internal combustion engines should be strictly prohibited.

- Construction staging areas shall be established at locations that will create the greatest distance between the construction-related noise sources and noise-sensitive receptors nearest the project site during all project construction. Locate material stockpiles, as well as maintenance/equipment staging and parking areas, as far as feasible from residential receptors.

- Control noise from construction workers' radios to a point where they are not audible at existing residences bordering the project site.

- Where feasible, temporary power service from local utility companies should be used instead of portable generators.

- Locate cranes, if used, as far from adjoining noise-sensitive receptors as possible.

- During final grading, substitute graders for bulldozers, where feasible. Wheeled heavy equipment are quieter than track equipment and should be used where feasible.

- Substitute nail guns for manual hammering, where feasible.

- Avoid the use of circular saws, miter/chop saws, and radial arm saws near the adjoining noise-sensitive receptors. Where feasible, shield saws with a solid screen with material having a minimum surface density of 2 lbs/ft^2 (e.g., such as ¾" plywood).

- Maintain smooth vehicle pathways for trucks and equipment accessing the site, and avoid local residential neighborhoods as much as possible.

- During interior construction, the exterior windows facing noise-sensitive receptors should be closed.

- During interior construction, locate noise-generating equipment within the building to break the line-of-sight to the adjoining receptors.

- The contractor shall prepare a detailed construction schedule for major noise-generating construction activities. The construction plan shall identify a procedure for coordination with adjacent residential land uses so that construction activities can be scheduled to minimize noise disturbance.

- Designate a "disturbance coordinator" who would be responsible for responding to any complaints about construction noise. The disturbance coordinator will determine the cause of the noise complaint (e.g., bad muffler, etc.) and will require that reasonable measures be implemented to correct the problem. Conspicuously post a telephone number for the disturbance coordinator at the construction site and include in it the notice sent to neighbors regarding the construction schedule.

The implementation of the reasonable and feasible controls outlined above would reduce construction noise levels emanating from the site, minimizing disruption and annoyance. With the implementation of these controls, as well as the Municipal Code limits on allowable construction hours, and considering that construction is temporary, the impact would be reduced to a less-than-significant level.

Mitigation Measure 1a: No further mitigation required.

Impact 1b: **Permanent Noise Level Increase.** The proposed project would not result in a substantial permanent noise level increase due to project-generated traffic at the existing noise-sensitive land uses in the project vicinity. This is a **less-than-significant** impact.

A significant permanent noise increase would occur if the project would substantially increase noise levels at existing sensitive receptors in the project vicinity. A substantial increase would occur if: a) the noise level increase is 5 dBA L_{dn} or greater, with a future noise level of less than 60 dBA L_{dn} at residences; or b) the noise level increase is 3 dBA L_{dn} or greater, with a future noise level of 60 dBA L_{dn} or greater at residences. According to the 2035 noise contours included in the Morgan Hill 2035 Draft Environmental Impact Report,[2] the surrounding residences would have future noise levels exceeding 60 dBA L_{dn}. Therefore, a significant impact would occur if traffic due to the proposed project would permanently increase ambient levels by 3 dBA L_{dn}. For reference, a 3 dBA L_{dn} noise increase would be expected if the project would double existing traffic volumes along a roadway.

The traffic study completed for the proposed project included peak hour turning movements for 13 intersections in the project vicinity. When the existing plus project scenario is compared to the existing scenario, the noise level increase due to the proposed project is calculated to be 1 dBA L_{dn} or less along every roadway segment in the project vicinity. Therefore, the project would not result in a noise level increase 3 dBA L_{dn} or more. The project-generated traffic noise would not result in a substantial, permanent noise level increase at noise-sensitive receptors. This would be a less-than-significant impact.

Mitigation Measure 1b: **No mitigation required.**

Impact 1c: **Noise Levels in Excess of Standards.** The proposed project is not expected to generate noise in excess of standards established in the City's General Plan and Municipal Code at sensitive receptors surrounding the site. **This would be a less-than-significant**.

Under the City of Morgan Hill's Noise Element and Municipal Code, noise levels produced by the operation of the mechanical equipment would be considered significant if noise levels substantially exceed existing ambient noise levels.

Various mechanical equipment, such as heating, ventilation, and air conditioning (HVAC) units, are typical for residential dwellings. At the time of this study, the type, size, number, and generated noise levels of such units were unknown. Additionally, the locations of potential HVAC units on the project site is unavailable at this time. For purposes of assessing the worst-case scenario, each residential unit is assumed to have an HVAC system, and the units would be located along the exterior building façades at the rear of side of the structures.

Typical noise levels produced by residential HVAC units would range from 53 to 63 dBA at 3 feet during operation. These types of units typically cycle on and off continuously during daytime and nighttime hours. Therefore, multiple units clustered in the same general vicinity are usually

[2] Placeworks, "Morgan Hill 2035 DEIR," January 13, 2016.

operating simultaneously at any given time. The detached single-family residences are located along the eastern boundary of the project site in clusters of two or four units. Assuming up to three HVAC units would operate simultaneously at any given time for a 24-hour period, the estimated day-night average noise level at 3 feet would be up to 74 dBA DNL. The property lines of the nearest existing residences located east of the project site, opposite Mission View Drive, are approximately 120 feet from the nearest façades of the proposed single-family units along the eastern project site. At this distance, the hourly average noise levels would be up to 36 dBA L_{eq}, assuming up to three units operating simultaneously, and the day-night average noise level would be 58 dBA L_{dn}. According to ST-1 and the existing noise contours shown in the City's General Plan, the ambient noise levels at these residences would be 64 dBA L_{eq} and would exceed 60 dBA L_{dn}. Therefore, the proposed project would not exceed ambient noise levels at the residences to the east of the site.

All other surrounding land uses would be 150 feet or more from the nearest proposed residential building façades on the project site. Therefore, mechanical equipment noise generated at the site would be below 36 dBA L_{eq} on an hourly basis and would be below 58 dBA L_{dn} on a 24-hour basis. Ambient noise levels at existing noise-sensitive uses surrounding the site would not be exceeded by project-generated noise at the project site. This would be a less-than-significant impact.

Mitigation Measure 1c: None required.

Impact 2: Exposure to Excessive Groundborne Vibration. Construction-related vibration is not expected to exceed 0.3 in/sec PPV at existing buildings surrounding the project site. This is a **less-than-significant** impact.

The construction of the project may generate perceptible vibration when heavy equipment or impact tools (e.g. jackhammers, hoe rams) are used. While equipment and phasing information was not available at the time of this study, the proposed project is not expected to require pile driving, which can cause excessive vibration.

The California Department of Transportation recommends a vibration limit of 0.5 in/sec PPV for buildings structurally sound and designed to modern engineering standards, which typically consist of buildings constructed since the 1990s. Conservative vibration limits of 0.3 in/sec PPV has been used for buildings that are found to be structurally sound but where structural damage is a major concern (see Table 3 above for further explanation). For historical buildings or buildings that are documented to be structurally weakened, a cautious limit of 0.08 in/sec PPV is often used to provide the highest level of protection. No historical buildings or buildings that are documented to be structurally weakened adjoin the project site. For the purposes of this study, groundborne vibration levels exceeding the conservative 0.3 in/sec PPV limit at the existing residential and commercial buildings surrounding the site would have the potential to result in a significant vibration impact.

Table 9 presents typical vibration levels that could be expected from construction equipment at a distance of 25 feet. Project construction activities, such as drilling, the use of jackhammers, rock drills and other high-power or vibratory tools, and rolling stock equipment (tracked vehicles,

compactors, etc.), may generate substantial vibration in the immediate vicinity. Jackhammers typically generate vibration levels of 0.035 in/sec PPV, and drilling typically generates vibration levels of 0.09 in/sec PPV at a distance of 25 feet. Vibration levels would vary depending on soil conditions, construction methods, and equipment used. Table 9 also summarizes the distances to the 0.08 in/sec PPV threshold for historical buildings and to the 0.3 in/sec PPV threshold for all other buildings.

TABLE 9 Vibration Source Levels for Construction Equipment

Equipment		PPV at 25 ft. (in/sec)	Minimum Distance to Meet 0.08 in/sec PPV (feet)	Minimum Distance to Meet 0.3 in/sec PPV (feet)
Clam shovel drop		0.202	58	18
Hydromill (slurry wall)	in soil	0.008	3	1
	in rock	0.017	6	2
Vibratory Roller		0.210	60	19
Hoe Ram		0.089	28	9
Large bulldozer		0.089	28	9
Caisson drilling		0.089	28	9
Loaded trucks		0.076	24	8
Jackhammer		0.035	12	4
Small bulldozer		0.003	1	<1

Source: Transit Noise and Vibration Impact Assessment Manual, Federal Transit Administration, Office of Planning and Environment, U.S. Department of Transportation, FTA Report No. 0123, September 2018, as modified by Illingworth & Rodkin, Inc., January 2021.

Worst-case scenario vibration levels were estimated at the nearest building façades surrounding the site, as measured from project's boundaries. The nearest buildings surrounding the site range from 65 to 425 feet from the nearest boundaries of the project site. At these distances, construction vibration levels would be at or below 0.073 in/sec PPV for all potential equipment used at the site. The proposed offsite sewer line construction work would be about 75 feet from the nearest residential buildings, which would expose the buildings to vibration levels up to 0.063 in/sec PPV. The 0.3 in/sec PPV threshold would not be exceeded during construction activities at the project site. This would be a less-than-significant impact.

Mitigation Measure 2: None required.

Impact 3: Excessive Aircraft Noise. The project site is located more than four miles from a public airport or private-use airport and would not expose people residing or working in the project area to excessive noise levels. This is a **less-than-significant** impact.

San Martin Airport is a public non-towered airport located about 4.87 miles southeast of the project site. According to the Santa Clara County Airport Land Use Commission (ALUC)'s Comprehensive Land Use Plan for this airport, [3] the project site lies outside the 2022 55 dBA CNEL noise contour. While aircraft flyovers would at times be audible at project site, noise levels

[3] Santa Clara County Airport Land Use Commission, "Comprehensive Land Use Plan Santa Clara County: South County Airport," September 10, 2008 and amended November 16, 2016.

due to aircraft would not result in future exterior noise levels of 60 dBA L_{dn}/CNEL or more, and therefore, both the exterior and interior noise levels resulting from aircraft would be compatible with the proposed project.

Norman Y. Mineta San José International Airport is approximately 20 miles north of the project site. The project site lies outside the 2027 noise contour figure for the airport, which is shown in the airport's Master Plan.[4] The proposed project would be compatible with the aircraft noise generated from the nearest airports. This is a less-than-significant impact.

Mitigation Measure 3: **None required.**

[4]City of San José, "Norman Y. Mineta San José International Airport Master Plan Update Project: Eighth Addendum to the Environmental Impact Report," February 10, 2010.

Cumulative Impacts

Cumulative noise impacts would include either cumulative traffic noise increases under future conditions or temporary construction noise from cumulative construction projects.

A significant cumulative traffic noise increase would occur if two criteria are met: 1) if the cumulative traffic noise level increase was 3 dBA L_{dn} or greater for future levels exceeding 60 dBA L_{dn} or was 5 dBA L_{dn} or greater for future levels at or below 60 dBA L_{dn}; and 2) if the project would make a "cumulatively considerable" contribution to the overall traffic noise increase. A "cumulatively considerable" contribution would be defined as an increase of 1 dBA L_{dn} or more attributable solely to the proposed project.

The traffic study prepared for the proposed project included traffic scenarios for cumulative 2035 (no project) and cumulative 2035 plus project conditions. Cumulative traffic noise level increases were calculated by comparing the traffic volumes of both cumulative scenarios to existing traffic volumes.

A 3 dBA L_{dn} or more noise level increase was calculated for both cumulative scenarios (with and without the proposed project) along the following roadway segments: Mission View Drive, south of Cochrane Road; Mission View Drive, north and south of Avenida De Los Padres; Mission View Drive, north of Half Road; Half Road, west of Mission View Drive; Condit Road, north of Main Avenue; and Diana Avenue, west of Condit Road. Since a 3 dBA L_{dn} or more increase was calculated for both cumulative scenarios, the project's contribution to the overall noise level increase would be less than 1 dBA L_{dn}. All other roadway segments would result in a noise level increase of 2 dBA L_{dn} or less. Therefore, the proposed project would not result in a cumulative traffic noise increase under the proposed project.

There are no known approved projects surrounding the project site that would be constructed during the same timeframe as the proposed project. Therefore, the noise-sensitive receptors surrounding the project site would not be subject to cumulative construction impacts.

Executive Summary

This report presents the results of the transportation analysis (TA) conducted for the proposed Crosswinds residential development in Morgan Hill, California. The 30.5-acre project site is currently vacant and is generally bounded by Half Road to the south, Mission View Drive to the east, future extension of DePaul Drive to the west, and Avenida De Los Padres to the north. The project as proposed will consist of a total of 269 residential units comprised of 149 condos, 56 detached single-family, and 64 duet units. The project would include the extension of DePaul Drive to the south with termination as a cul-de-sac just north of Half Road. Access to the project site would be provided via a full access driveway along Mission View Drive and two full access driveways along the future DePaul Drive extension.

Transportation Analysis Scope

The TA consists of a California Environmental Quality Act (CEQA) required vehicle-miles-traveled (VMT) analysis and a supplemental traffic operations analysis that demonstrates the project's consistency with the *Morgan Hill 2035 General Plan* goals and policies.

CEQA Transportation Analysis Scope

The CEQA VMT impact analysis was completed using the Valley Transportation Authority's (VTA) VMT tool. The City of Morgan Hill is currently developing the framework for new transportation policies based on VMT as the primary measure of transportation impacts. The new policies will replace the City's current transportation policies that are based on levels of service per the Morgan Hill 2035 General Plan. However, since the City has not formally adopted its own city-specific VMT policies, this study utilizes VMT analysis methodology and impact thresholds recommended in the Governor's Office of Planning and Research (OPR) *Technical Advisory on Evaluating Transportation Impacts in CEQA*, December 2018.

Traffic Operations Analysis Scope

The current General Plan, *Morgan Hill 2035 General Plan,* adopted in July 2016 uses Level of Service (LOS) as its primary metric for the evaluation of the projected operation of the City's roadway system. Therefore, a traffic operations analysis based upon peak hour intersection level of service analysis is included for consistency with the General Plan goals and policies. The traffic operations analysis supplements the CEQA required VMT analysis. However, the determination of project impacts per CEQA requirements is based solely on the VMT analysis.

CEQA VMT Analysis

The results of the VMT analysis using the VTA's VMT Evaluation Tool indicate that the existing VMT for residential uses in the project vicinity is 30.46 VMT per capita.

The results also indicate that the project is projected to generate VMT per capita (27.41), which would exceed the OPR's recommended impact threshold of 20.94 VMT per capita. Therefore, the project would result in an impact on the transportation system based on OPR's VMT impact criteria.

VMT Impacts and Mitigation

Using OPR's impact thresholds, the project would need to implement VMT reduction measures to achieve a 24% reduction (27.41 to 20.94) in its VMT per capita for the proposed residential uses to reduce its impact to less than significant levels.

OPR's recommended 15% below existing VMT impact threshold encourages developments in transit-rich, highly mixed-use areas to implement design features and trip reduction measures to take advantage of existing multi-model infrastructure and land use mixes in reducing trip making and/or trip lengths. However, many communities such as Morgan Hill have very limited multi-modal transportation infrastructure and lack a mix of complementary land uses. The lack of employment in these communities along with minimal transit options results in a greater number and longer commute trips. Therefore, it is highly unlikely that developments like the proposed project in these cities can achieve OPR's recommended 15% reduction in VMT. Therefore, absent of the City adopting its own City-specific VMT policies and impact thresholds, the proposed project's VMT impact must be deemed significant and unavoidable.

Per its condition of approval, the City will however require that the project implement and/or incorporate in its design the following VMT reduction measures to encourage the use of multi-modal travel and reduce the number and length of vehicular trips:

1. The management entity/HOA shall provide fully (100 percent) subsidized annual VTA transit passes for all project homeowners (a maximum of one transit subsidy per residential unit, which would result in up to 269 transit passes per year). This subsidized transit program shall be approved by the City of Morgan Hill's Public Services Director prior to issuance of occupancy.

2. The project must improve the surrounding pedestrian network by including sidewalks which terminate at the common property line, allowing for connections to the adjacent property in the event there is development in the future. Continuous sidewalks are proposed along the project frontages. The proposed frontage improvements along Mission View Drive, Half Road, and De Paul Drive include sidewalk improvements; each of the street sections will be wide enough to accommodate future bicycle lanes.

3. The proposed development will include 64 bicycle parking spaces.

Traffic Operations Analysis

Project Trip Generation

Based on the recommended rates for single-family detached housing (Land Use #210) and the size of the proposed project, it is estimated that the proposed project would generate 2,539 daily trips, with 199

trips (50 inbound and 149 outbound) occurring during the AM peak hour and 266 trips (168 inbound and 98 outbound) occurring during the PM peak hour.

Intersection Operations Analyses

The results of the traffic operations analysis indicate that based on the City's operating standards, the proposed project would have an adverse effect on intersection operations at the following four study intersections under Year 2030 Cumulative with project conditions.

6. Mission View Drive and Cochrane Road (AM & PM Peak Hours)
8. Mission View Drive and Half Road (unsignalized) (AM & PM Peak Hours)
9. Condit Road and Main Avenue (PM Peak Hour)
10. Condit Road and Diana Avenue (unsignalized) (AM Peak Hour)

Adverse Intersection Operations Effects and Potential Improvements

The adverse intersection operation effects identified under Year 2030 Cumulative with project conditions are discussed below. Included are descriptions of the adverse effects on intersection operations and potential improvement measures that may be included as part of the project's Conditions of Approval. However, the identified roadway operations and improvements are not required or considered project impacts per CEQA guidelines.

6. Cochrane Road and Mission View Drive

This intersection is projected to operate at an unacceptable LOS F and E during the AM and PM peak hours, respectively, under Year 2030 Cumulative without project conditions. Traffic associated with the proposed project would cause the critical delay to increase by more than four seconds and the volume-to-capacity ratio (V/C) to increase by more than 0.01 during both the AM and PM peak hours. This constitutes an adverse effect on intersection operations based on the City of Morgan Hill's level of service standards.

The addition of a second northbound left-turn lane on Mission View Drive and a cycle length adjustment would be necessary to improve intersection operations. The addition of the second northbound left-turn lane will require lane striping and signal modification but will fit within the existing curb-to-curb pavement width on Mission View Drive. Implementation of this improvement would improve the intersection's level of service to LOS C during both the AM and PM peak hours under Year 2030 Cumulative with project conditions.

8. Mission View Drive and Half Road

This intersection is projected to operate at an unacceptable LOS F during the PM peak hour under Year 2030 Cumulative without and with project conditions. Furthermore, this intersection is projected to operate at an acceptable LOS D during the AM peak hour under Year 2030 Cumulative without conditions and degrade to LOS E with the addition of project traffic. Additionally, the peak-hour traffic signal warrant checks indicate that the intersection would have traffic volumes that meet thresholds that warrant signalization during both the AM and PM peak hours under Year 2030 Cumulative without and with project conditions. This constitutes an adverse effect on intersection operations based on the City of Morgan Hill's level of service standards.

The signalization of the intersection would be necessary to improve intersection operations. Implementation of a traffic signal at this location would improve the level of service to LOS C during both the AM and PM peak hours under Year 2030 Cumulative with project. This intersection is

under the jurisdiction of both the City of Morgan Hill and Santa Clara County. Therefore, implementation of the recommended improvements will require City and County approval.

9. Main Avenue and Condit Road

This intersection is projected to operate at an unacceptable LOS F during the PM peak hour under Year 2030 Cumulative without project conditions. Traffic associated with the proposed project would cause the critical delay to increase by more than four seconds and the volume-to-capacity ratio (V/C) to increase by more than 0.01 during the PM peak hour. This constitutes an adverse effect on intersection operations based on the City of Morgan Hill's level of service standards.

The addition of an exclusive southbound right-turn lane on Condit Road would be necessary to improve intersection operations. The addition of the right-turn lane will require signal modifications and lane striping on the southbound approach. Implementation of this improvement would improve the intersection's level of service to LOS D during the PM peak hour under Year 2030 Cumulative with project conditions. This intersection is under the jurisdiction of both the City of Morgan Hill and Santa Clara County. Therefore, implementation of the recommended improvements will require City and County approval.

10. Condit Road and Diana Avenue

This intersection is projected to operate at an unacceptable LOS E during the AM peak hour under Year 2030 Cumulative without and with project conditions. Additionally, the peak-hour traffic signal warrant checks indicate that the intersection would have traffic volumes that meet thresholds that warrant signalization during the AM peak hour under Year 2030 Cumulative without and with project conditions. This constitutes an adverse effect on intersection operations based on the City of Morgan Hill's level of service standards.

The signalization of the intersection would be necessary to improve intersection operations. Implementation of this improvement would improve the intersection's level of service to LOS B during the AM peak hour under Year 2030 Cumulative with project conditions.

Freeway Segment Level of Service Analysis

The results of the freeway segment level of service analysis indicate that ten directional mixed-flow lanes and one directional HOV lane on the freeway segments analyzed are projected to operate at an unacceptable LOS F during at least one peak hour under existing conditions and would continue to operate at LOS F conditions with the addition of traffic due to proposed project.

Improvement of freeway segment operations would require freeway widening to construct additional through lanes, thereby increasing freeway capacity. VTA's Valley Transportation Plan (VTP) 2040 identifies freeway express lane projects along US 101 between Cochrane Road and Whipple Avenue. The planned improvements consist of the conversion of the existing HOV lane to an express lane and the construction of a second express lane in each direction on US 101. These improvements would increase the capacity of the freeway and help to address the deficiency in freeway operations. However, it is not feasible for an individual development project to bear responsibility for implementing such extensive transportation system improvements due to constraints in the acquisition and cost of right-of-way.

Other Transportation Issues

Site Access

The project would include the extension of DePaul Drive to the south with termination as a cul-de-sac just north of Half Road. Access to the project site would be provided via a full access driveway along Mission View Drive and two full access driveways along the DePaul Drive extension.

On-Site Circulation

An internal private street network would provide access to each of the residential units from the proposed entrances along Mission View Drive and DePaul Drive. Most of the streets that front homes include on-street parallel parking. The internal streets would provide continuous access to each area of residential units.

Travel way on street is typically a minimum of 26 feet. The travel way on the internal streets is shown to be at least 20 feet wide. The narrower travel width will provide adequate width for two-way travel on each of the streets and will promote reduced travel speeds within the site. However, the straight nature of the internal roadways could result in drivers traveling at greater speeds than recommended. Therefore, it may be desirable to implement speed-reducing measures along the internal roadways. These measures could include the installation of speed bumps/humps along the internal roadways and/or bulb-outs at intersections and mid-block.

The project site plan shows sidewalks along the project's frontages along Mission View Drive and DePaul Drive and the internal street network on-site. However, there are no sidewalks provided along the west side of Mission View Drive between the project site and Cochrane Road. In conjunction with the existing sidewalks along the east side of Mission View Drive, the proposed sidewalks on Mission View Drive along the project frontage would provide a connection between the project site and bus stops along Mission View Drive and pedestrian destinations along Cochrane Road. There also are no sidewalks along either side of DePaul Drive between the project site and Cochrane Road. Therefore, there will be no sidewalk connection between the project site and Cochrane Road.

The project site should be designed following City of Morgan Hill design standards and provide adequate width and turn-radii at and along all drive/parking aisles to allow for two-way circulation and adequate circulation of larger vehicles (such as emergency trucks, garbage truck, and delivery trucks) throughout the project site. Adhering to the City of Morgan Hill standards and requirements, and implementing the above recommendations, the proposed site access points and layout of the surface parking areas would be adequate to accommodate the circulation of both passenger and emergency vehicles.

Emergency Vehicle Access and Circulation

The 20-foot-wide internal roadway would provide emergency vehicles (fire trucks) sufficient space to access each of the residential units on-site. There are several dead-end drive aisles that would not provide sufficient space for emergency vehicles to turn around. However, the dead-ends will be located along short segments of roadways. Thus, vehicles would be able to back out of the roadways.

Intersection Operations Analysis

The queuing analysis also indicates that the maximum vehicle queue for northbound left-turn movement at the Cochrane Road and Mission View Drive intersection currently exceeds the provided turn pocket storage space during the AM and PM peak hours under existing conditions.

The addition of project traffic is not projected to lengthen the projected queue during the AM peak hour. However, the addition of project traffic is projected to lengthen the projected queue by one vehicle or 25 feet during the PM peak hour under existing plus project conditions, which would exceed the existing storage capacity by 75 feet.

Recommendation: The northbound left-turn pocket can be lengthened by 250 feet to accommodate the projected queue during the AM peak hour. However, a second northbound left-turn lane is recommended to improve intersection operations.

Project Driveway Operations

The results of the project driveway operations analysis indicate that all three project driveways are projected to operate at acceptable levels of service (LOS D or better) during each of the peak hours analyzed and to have traffic conditions that fall below the thresholds that warrant signalization. Additionally, the 95th percentile queues at the project driveways are projected to be at most 25 feet.

Recommendation: A center-striped median is currently provided along Mission View Drive north of the project site. The current width of Mission View Drive along the project frontage is not adequate to provide a left-turn pocket into the project driveway. Mission View Drive would need to be widened along its east side, opposite the project frontage, to provide a striped left-turn pocket into the project site. Similarly, left-turn lanes should be striped at the project driveways along DePaul Drive if a center-striped median is planned.

Sight Distance

Based on Caltrans requirements, the available sight distance at the project site driveways on DePaul Drive and Mission View Drive would be adequate.

Recommendation: The site design should ensure design features, in particular, the landscaping and signage along the project site frontage and at the project site driveways, would not interfere with the sight distance at the proposed site driveway.

Parking

Based on Tables 18.72-2 and 18.72-3 of Section 18.72.030 of the Morgan Hill City Code, the project would be required to provide 2 covered parking spaces per residential unit and one guest parking space is required for every four residential units. The project would be required to provide 538 resident and 68 guest parking spaces for the proposed 269 residential units. The project is proposing to provide two covered parking spaces for each residential unit for a total of 538 parking spaces and 271 on-street parking spaces within the internal street network. Therefore, the provided number of parking spaces would satisfy the City's parking requirement.

Transit, Pedestrian, and Bicycle Analysis

The project site is served by Local Route 87 with bus stops along Mission View Drive and Half Road. In addition, Express Route 168 also provides service along Cochrane Road west of US 101. These two bus routes provide a connection to the Morgan Hill Caltrain Station. A conservative mode split in

Morgan Hill would be a three percent transit share. Assuming up to three percent transit mode share for the project equates to no more than six and eight transit riders during the AM and PM peak hours, respectively.

VTA has recommended that a new bus stop for Route 87 be installed along Mission View Drive on the project frontage just south of the project entrance. VTA also has suggested a new bus stop be installed on the northbound side of Mission View Drive if a controlled crosswalk were to be installed at the project entrance along Mission view Drive. However, this analysis showed no need for signal control at the project entrance. It is recommended that the project coordinate with VTA to identify the specific placement of a new bus stop along Mission View Drive and allow for adequate space along its frontage on Mission View to accommodate the installation of a bus stop including wider sidewalks, lighting, landscaping, and passenger pad.

Sidewalks are provided along the east side of Mission View Drive and the north side of Cochrane Road in the immediate project area. However, sidewalks along the south side of Cochrane Road are intermittent, with no sidewalk currently provided between the US 101 northbound ramps and De Paul Drive, and a short segment west of Mission View Drive. The project would provide sidewalks along its entire frontages along Mission View Drive, Half Road, and DePaul Drive and result in a continuous connection to the existing sidewalks on the east side of Mission View Drive to provide a safe connection between the project site and other surrounding land uses in the area. Controlled crossings at the intersections of Cochrane Road with Mission View Drive and DePaul Drive would provide a connection between the project area and retail uses on the north side of Cochrane Road.

Bike lanes are currently provided along the entire lengths of Cochrane Road and Main Avenue. An unpaved bike path, the Madrone Channel Trail, runs along the east side of US 101, between Tennant Avenue and Cochrane Road. It is expected that bicycle trips would comprise no more than one percent of the total project-generated trips. Thus, the project could potentially generate no more than three new bicycle trips during each of the peak hours. The demand generated by the proposed project could be accommodated by the existing bicycle facilities in the vicinity of the project site.

Freeway Ramp Analysis

Freeway On-Ramp Queuing Analysis

The analysis indicates that project traffic would not lengthen the projected 15-minute interval queue lengths at either of the subject Cochrane Road on-ramps under existing plus project conditions. Short vehicle queues, less than 10 vehicles, currently occur at the ramps, however, the queues dissipate during the 15-minute intervals because the demand volume is less than the service rate of the freeway ramp meters.

The volumes on the northbound diagonal on-ramp from westbound Cochrane Road are projected to be greater than the service rate of the ramp meter during the AM peak hour under Year 2030 Cumulative with project conditions. Therefore, queues are projected to develop on the northbound diagonal on-ramp. Trips from the proposed project will result in an increase in the projected queue by two vehicles. However, the projected queues on the metered northbound diagonal on-ramp can be accommodated entirely on the ramp.

Freeway Off-Ramp Queuing Analysis

The results of the analysis show that the 95th percentile queue lengths at each of the US 101 off-ramps to Cochrane Road are projected to be accommodated entirely on the ramps and would not extend back and disrupt the freeway mainline.

1. Introduction

This report presents the results of the Transportation Analysis (TA) conducted for the proposed Crosswinds residential development in Morgan Hill, California. The 30.5-acre project site is currently vacant and is generally bounded by Half Road to the south, Mission View Drive to the east, future extension of DePaul Drive to the west, and Avenida De Los Padres to the north. The project as proposed will consist of a total of 269 residential units comprised of 149 condos, 56 detached single-family, and 64 duet units. The project would include the extension of DePaul Drive to the south with termination as a cul-de-sac just north of Half Road. Access to the project site would be provided via a full access driveway along Mission View Drive and two full access driveways along the future DePaul Drive extension. The project site location and the surrounding study area are shown in Figure 1. The project site plan is shown in Figure 2.

Scope of Study

The TA consists of a California Environmental Quality Act (CEQA) required vehicle-miles-traveled (VMT) analysis and a supplemental traffic operations analysis that demonstrates the project's consistency with the *Morgan Hill 2035 General Plan* goals and policies.

CEQA Transportation Analysis Scope

Historically, traffic impact analysis has focused on the identification of traffic impacts and potential roadway improvements based on delay to relieve traffic congestion that may result due to proposed/planned growth. However, with the adoption of Senate Bill (SB) 743 legislation, public agencies are required (effective July 2020) to base transportation impacts on Vehicle-Miles-Traveled (VMT) rather than level of service that typically uses delay as its metric. The change in measurement is intended to better evaluate the effects on the state's goals for climate change and multi-modal transportation. Therefore, to adhere to the state's legislation, all new development projects are required to analyze transportation impacts using the VMT metric.

The CEQA VMT impact analysis was completed using the Valley Transportation Authority's (VTA) VMT tool. The City of Morgan Hill is currently developing the framework for new transportation policies based on VMT as the primary measure of transportation impacts. The new policies will replace the City's current transportation policies that are based on levels of service per the Morgan Hill 2035 General Plan. However, since the City has not formally adopted its own city-specific VMT policies, this study utilizes VMT analysis methodology and impact thresholds recommended in the Governor's Office of

Figure 1
Site Location and Study Intersections

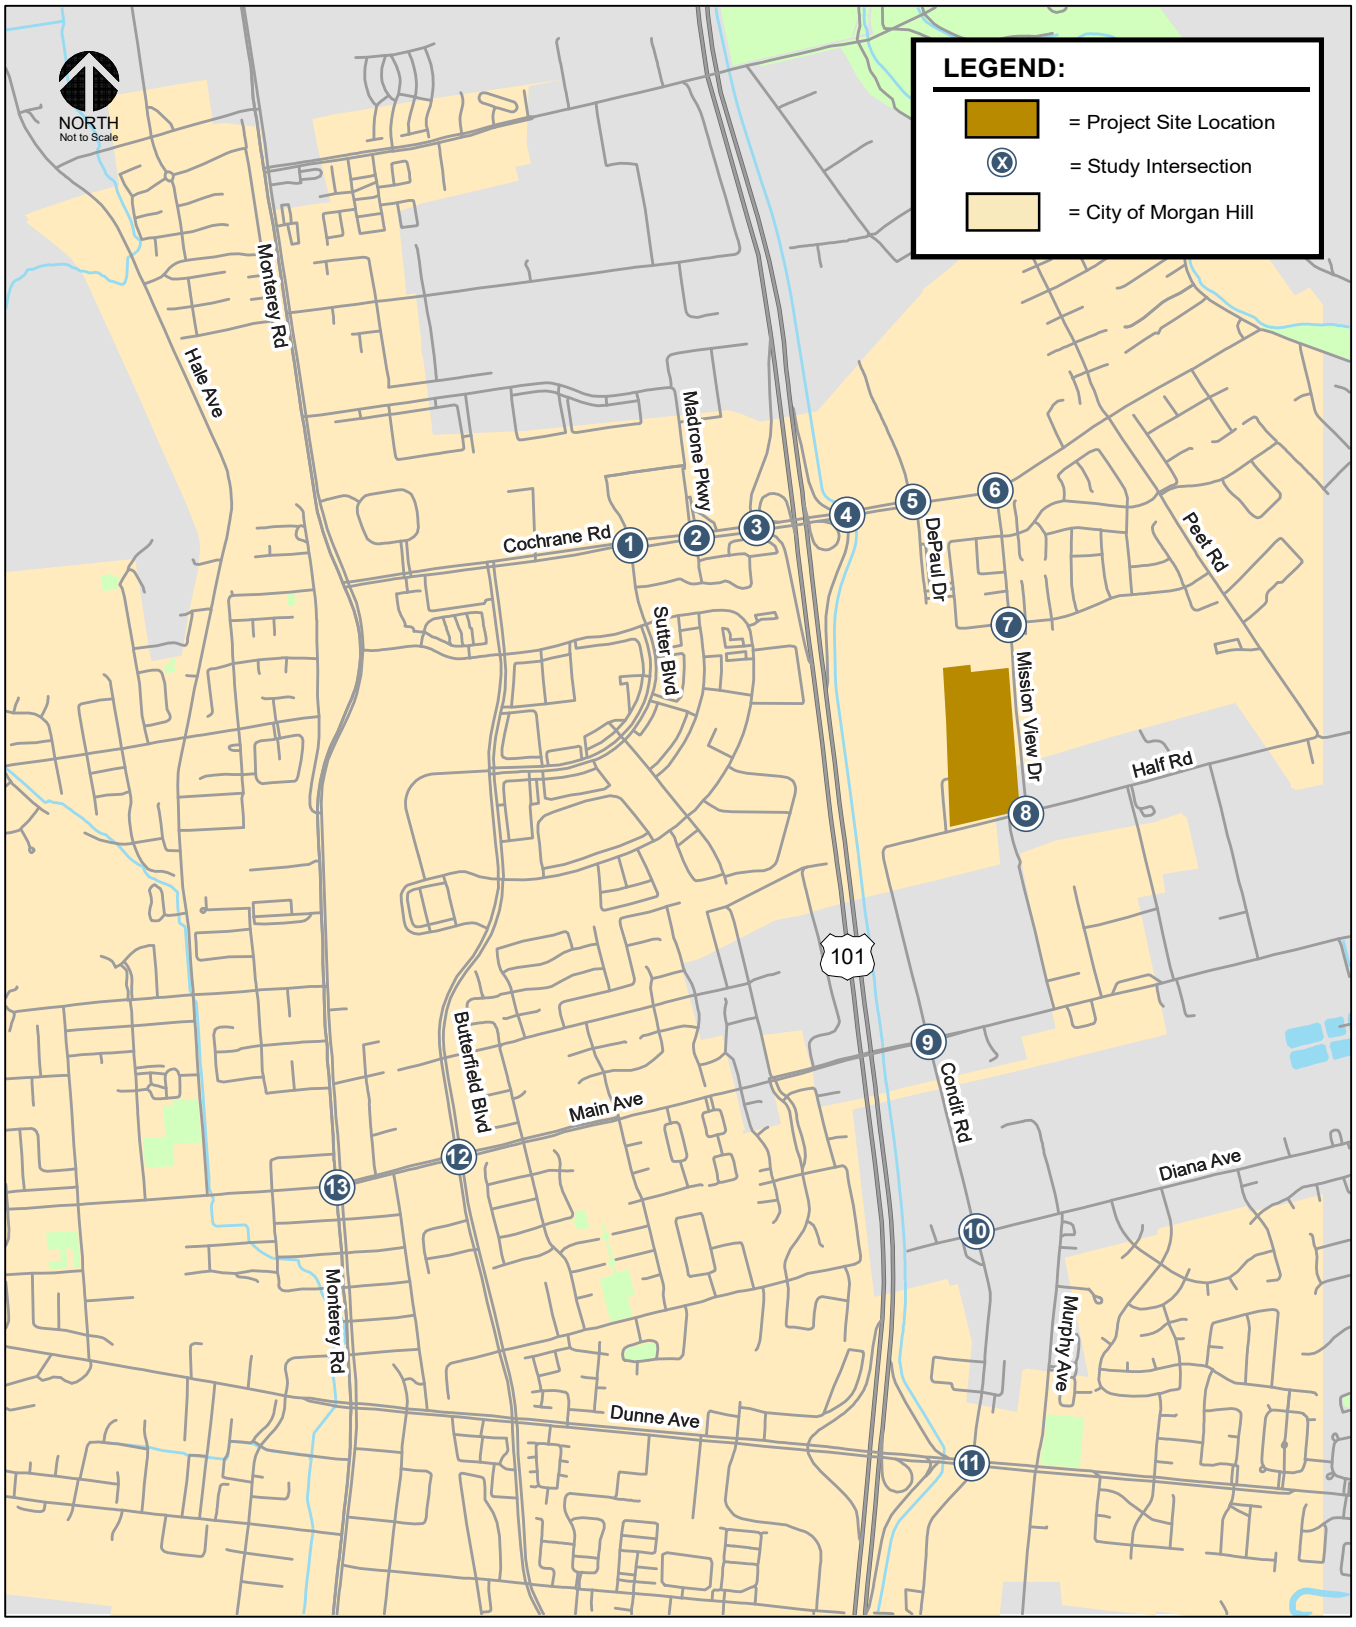

Figure 2
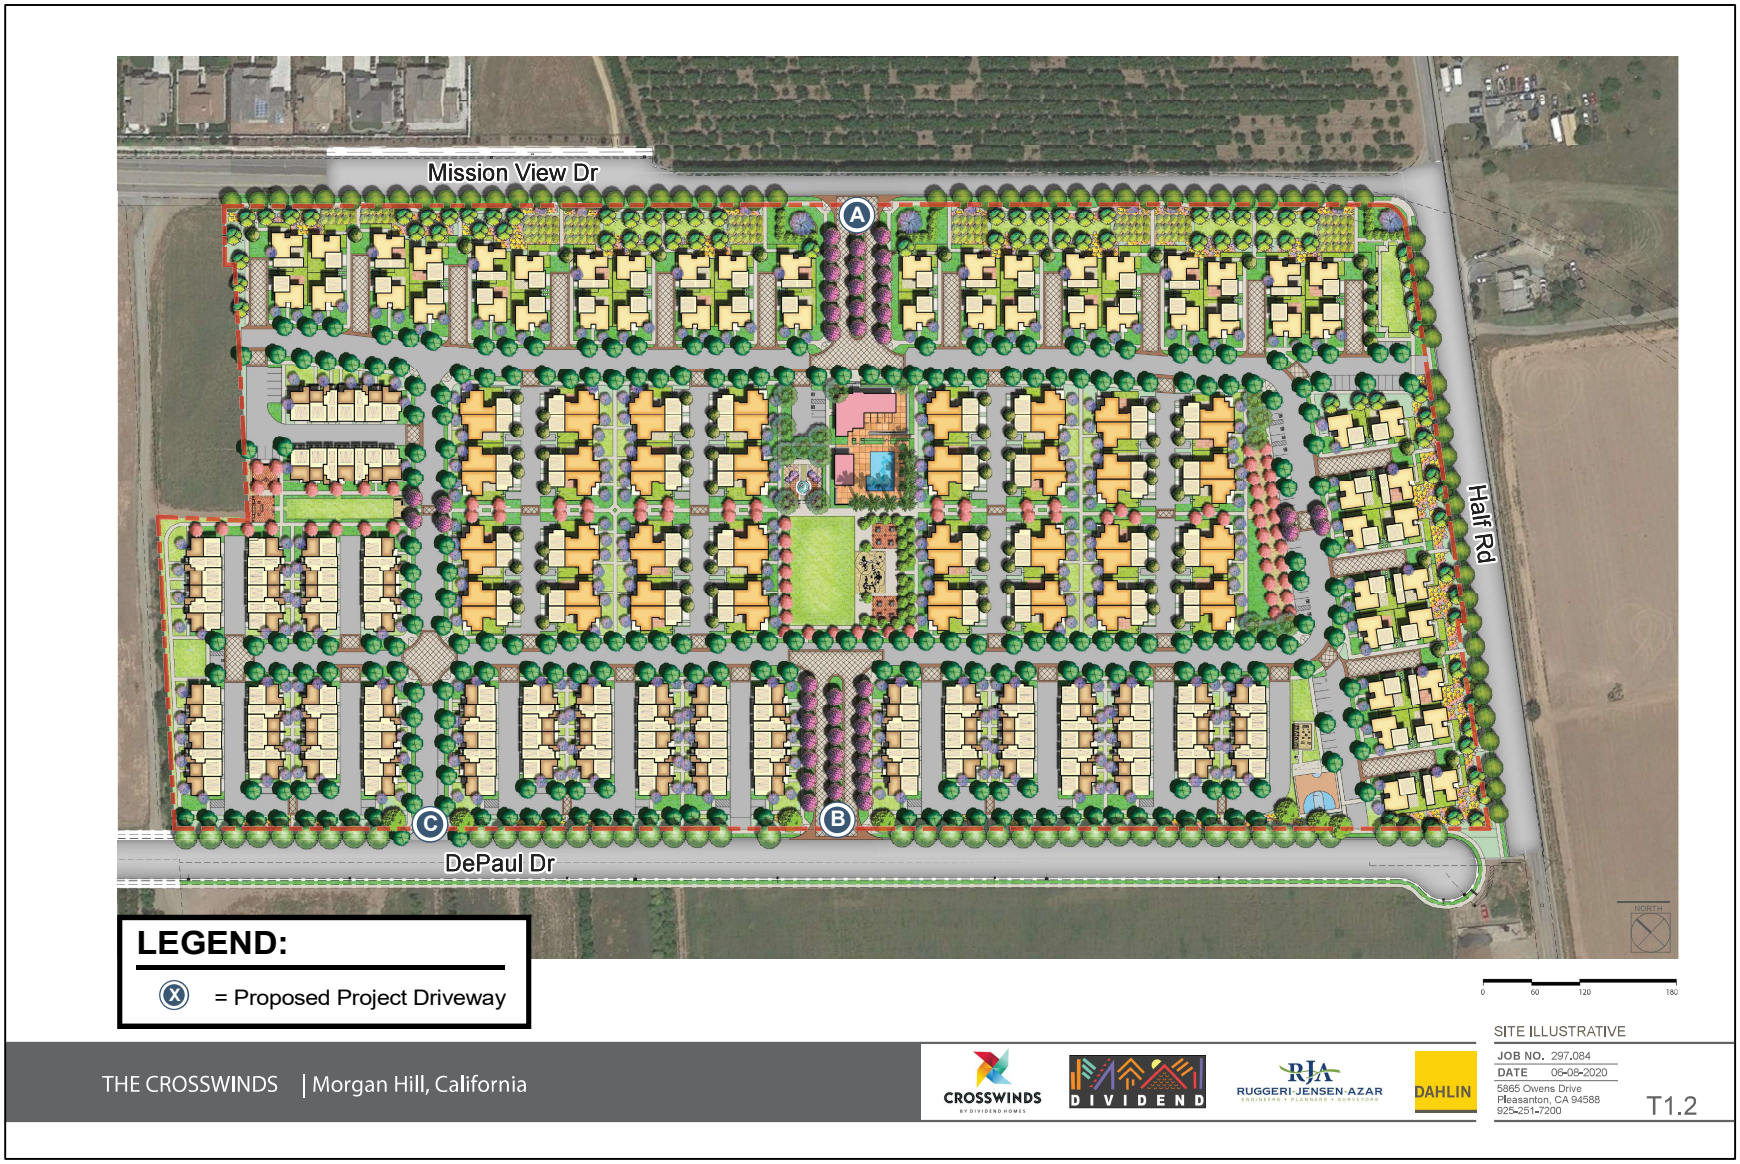
Project Site Plan



Planning and Research (OPR) Technical Advisory on Evaluating Transportation Impacts in CEQA, December 2018.

Traffic Operations Analysis Scope

The current General Plan, *Morgan Hill 2035 General Plan,* adopted in July 2016 uses Level of Service (LOS) as its primary metric for the evaluation of the projected operation of the City's roadway system. Therefore, a traffic operations analysis based upon peak hour intersection level of service analysis is included for consistency with the General Plan goals and policies. The traffic operations analysis supplements the CEQA required VMT analysis. However, the determination of project impacts per CEQA requirements is based solely on the VMT analysis.

The traffic operations analysis includes the evaluation of weekday AM and PM peak hour operations at selected intersections for the purpose of identifying operational issues (queuing, signal operations, and potential multi-modal issues) at intersections in the general vicinity of the project site. The traffic operations analysis also includes an evaluation of the effects of the project's on-site access, on-site circulation, and related safety elements in the immediate area of the project.

The effects of the proposed development on traffic operations on the surrounding roadway system were evaluated following the standards and methodologies set forth by the City of Morgan Hill in its *Guidelines for Preparation of Transportation Impact Reports*, February 2010, Morgan Hill 2035 General Plan, and the Santa Clara Valley Transportation Authority (VTA). The VTA administers the County Congestion Management Program (CMP).

Report Organization

The remainder of this report is divided into five chapters. Chapter 2 describes existing conditions in terms of the existing roadway network, transit service, and existing bicycle and pedestrian facilities. Chapter 3 presents the CEQA VMT analysis. Chapter 4 presents the traffic operations analysis and the project's effects on the transportation system and describes the recommended roadway improvements. Chapter 5 presents the analysis of other transportation-related issues, including site access. Chapter 6 presents the conclusions of the transportation analysis.

2. Existing Transportation System

This chapter describes the existing transportation system within the project area. It describes transportation facilities for all of the major transportation facilities in the vicinity of the site, including the roadway network, transit service, and bicycle and pedestrian facilities.

Existing Roadway Network

Regional access to the project site is provided via US 101. Local access to the site is provided by Cochrane Road, Dunne Avenue, DePaul Drive, Half Road, Mission View Drive, Main Avenue, and Condit Road. These facilities are described below.

US 101 is a north-south freeway extending northward to San Francisco and southward through Gilroy. US 101 is an eight-lane freeway (three mixed-flow lanes and one high-occupancy vehicle (HOV) lane in each direction) north of Cochrane Road. South of Cochrane Road, it is a six-lane freeway with no HOV lanes. Access to and from the project site is provided via its interchanges at Cochrane Road and Dunne Avenue.

Cochrane Road is an east-west divided roadway that runs from Monterey Road to Malaguerra Avenue, east of US 101. Currently, Cochrane Road is a four-lane road between Monterey Road and Sutter Boulevard. Between Sutter Boulevard and US 101, Cochrane Road widens to three lanes eastbound and two lanes westbound, then narrows back to four lanes east of US 101, and to two lanes east of Mission View Drive. Cochrane Road has posted speed limits of 40 and 45 miles per hour (mph). Access to the project site is provided via its intersections with DePaul Drive and Mission View Drive.

Dunne Avenue transverses the City extending from the east part of town to the west with a posted speed limit of 35 to 40 mph and sidewalks along both sides of the street. Bike lanes are found along both sides of Dunne Avenue between Peak Avenue and Gallop Drive (east of US 101). Access to the project site is provided via its intersection with Condit Road.

DePaul Drive is a north-south undivided roadway that intersects Cochrane Road approximately 700 feet east of the US-101 northbound ramps intersection and runs approximately 1,500 feet north and 1,000 feet south of Cochrane Road. DePaul Drive has a posted speed limit of 35 miles per hour (mph). The project proposes to extend DePaul Drive by approximately 2,280 feet south to provide direct

access to the project site via two full access driveways. As proposed, DePaul Drive would terminate as a cul-de-sac just north of Half Road.

Half Road is an east-west undivided roadway that runs from Condit Road to Cochrane Road. Half Road runs along the project's southern frontage and has a posted speed limit of 35 miles per hour (mph). However, Half Road would not provide direct access to the project site and would not intersect the proposed extension of DePaul Drive. Access to the project site is provided via its intersection with Mission View Drive.

Mission View Drive is a north-south two-lane undivided roadway that runs south from Eagle View Drive to Half Road. In the vicinity of the project site, Mission View Drive has a posted speed limit of 40 miles per hour (mph). Mission View Drive runs along the project's eastern frontage. Access to the project site would be provided via a full access driveway along Mission View Drive.

Main Avenue is a two-lane roadway that runs eastward from its intersection with DeWitt Avenue to Coyote Road at the base of the eastern foothills. The roadway has an overcrossing of US 101, however, no access to US 101 is provided. Access to the project site is provided via its intersection with Condit Road.

Condit Road is a two-lane north-south roadway that extends from Half Road southward to Tennant Avenue. The posted speed limit on Condit Road is 45 mph. Access to the project site is provided via its transition to Half Road.

Existing Bicycle and Pedestrian Facilities

As defined by the Valley Transportation Authority (VTA), bicycle facilities include Class I bikeways (defined as off-street bike paths, which are shared with pedestrians and excludes general motor vehicle traffic), Class II bikeways (defined as striped bike lanes on street), and rated streets. The latter refers to streets frequently used by bicyclists, sharing the roadway with motor vehicles, and includes city designated Class III bike routes. Rated streets include extreme caution (heavy traffic volumes with high traffic speeds), alert (moderate traffic volumes and speeds), and moderate (low traffic volumes and moderate to low traffic speeds). Class III bikeways only have signs to help guide bicyclists on recommended routes to certain locations.

In the project vicinity, bike lanes are currently provided along the extent of Cochrane Road and Main Avenue beginning at Live Oak High School and continuing west across US-101 to Peak Avenue. An unpaved bike path, the Madrone Channel Trail, runs along the east side of US 101, between Tennant Avenue and Cochrane Road.

The remaining bicycle facilities in the area are located west of US-101. Bike lanes are currently provided along the following roadways:

- Butterfield Boulevard, along its entire length;
- Sutter Boulevard, from Cochrane Road to Butterfield Boulevard;
- Monterey Road, nearly its entire length within City of Morgan Hill limits, with the exception of the segment that runs through downtown between Dunne Avenue and Main Avenue;
- Burnett Avenue, from Monterey Road to Bauman Court (west of US 101);
- Central Avenue, from Butterfield Boulevard to its termination point west of US 101;
- Dunne Avenue, from Peak Avenue to east of Hill Road;
- Depot Street, along its entire length;
- Peak Avenue, between Dunne Avenue and Wright Avenue;
- Murphy Avenue, between Dunne Avenue and Kelly Park Circle;

- Hale Avenue, between Main Avenue and north of the City of Morgan Hill.

Other bicycle facilities in the project vicinity include the following:

- A bike route on Monterey Road, between Dunne Avenue and Main Avenue;
- A paved bike path on the east side of Butterfield Boulevard, between San Pedro Avenue and Central Avenue.

The existing bicycle facilities in the study area are presented graphically in Figure 3.

Pedestrian facilities in the study areas consist primarily of sidewalks, pedestrian push buttons, marked crosswalks, and signal heads at signalized intersections. However, the project site is located within a primarily undeveloped area where continuous sidewalks along the surrounding streets are not available. Sidewalks are provided along at least one of the sides of the following roadways in the vicinity of the project site:

Cochrane Road – sidewalks are provided along the north side of the street between Butterfield Boulevard and White Moon Drive. Along the south side of the street, sidewalks are provided from Monterey Road to the east of Mission View Drive with the exception of the segments between Woodview Avenue and Sutter Boulevard, US 101 northbound ramps and DePaul Drive, and a short segment west of Mission View Drive.

Mission View Drive – sidewalks are provided along the east side of the street between the northern end of Mission View Drive (at Eagle View Drive) until approximately 950 feet north of its intersection with Half Road. There are no sidewalks along the west side of Mission View Drive, with the exception of curb ramps located at the northwest and southwest corners of the Mission View Drive and Cochrane Road intersection.

Sidewalks are not provided on either side of DePaul Drive south of Cochrane Road. All other streets in the immediate vicinity of the project site fronting undeveloped areas have no sidewalks.

Existing Transit Service

Existing transit service to the study area is provided by the VTA and Caltrain. The transit services are described below and shown in Figure 4.

VTA Bus Services

The study area is served directly by one local bus (Local Bus Route 87). In addition, Express Route 168 operates along Cochrane Road west of US 101.

Local Bus Route 87 operates on Cochrane Road, Mission View Drive, and Half Road in the study area. It runs from Burnett Avenue to the Civic Center (Main and Dewitt) in Morgan Hill with approximately 60-minute headways in the AM and PM commute periods. Route 87 operates between 6:30 AM and 5:45 PM. The nearest Route 87 bus stops to the project site are located near the Half Road/Elm Road and Mission View Drive/Avenida De Los Padres intersections.

Express Route 168 operates on Butterfield Boulevard and Cochrane Road on its route between the Gilroy Transit Center and the San Jose Diridon Transit Center. It operates northbound with 30- to 45-minute headways during the AM commute period only and southbound with 45-minute headways during the PM commute period only. The nearest Route 168 bus stops to the project site are located near the intersection of Cochrane Road and Sutter Boulevard, approximately ¾ miles west of the project site.

Figure 3
Existing Bicycle Facilities

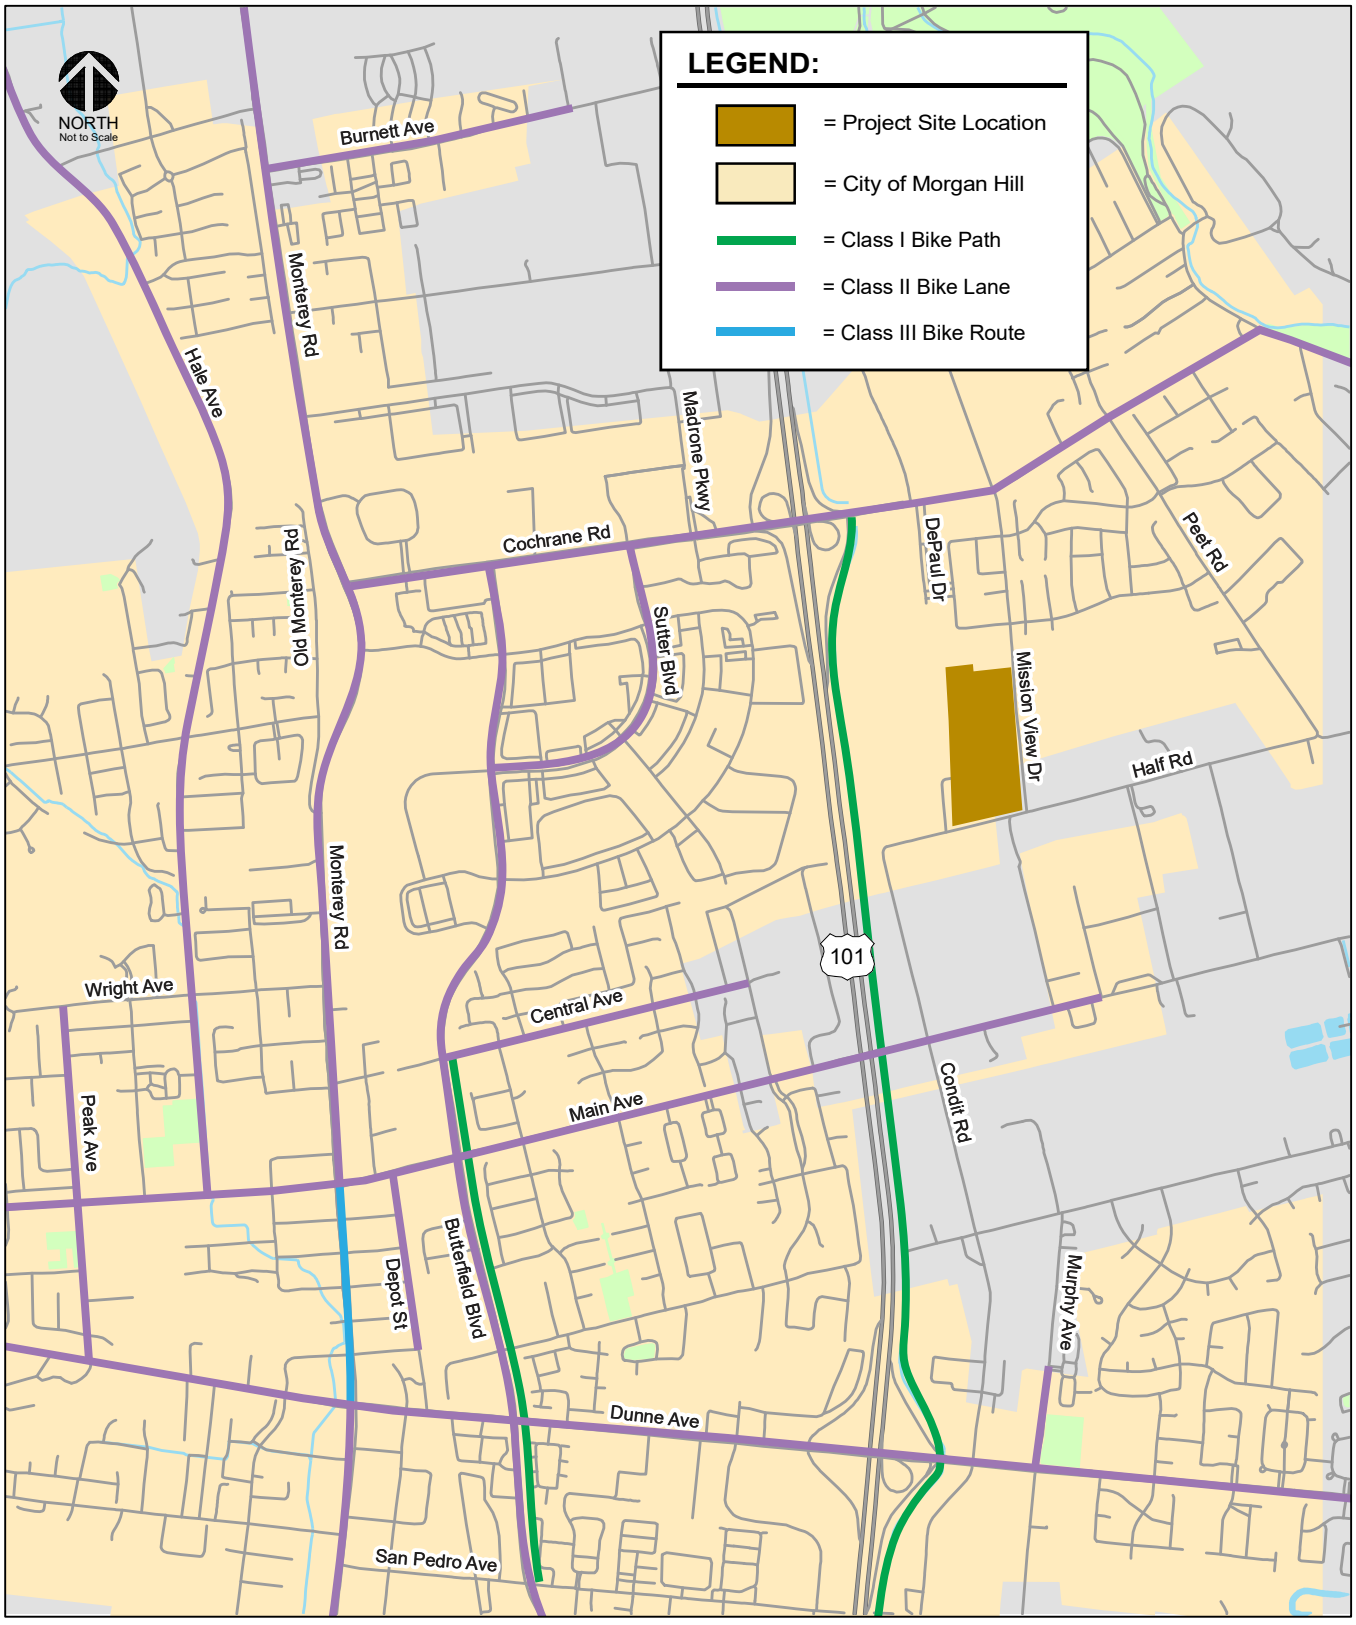


Figure 4
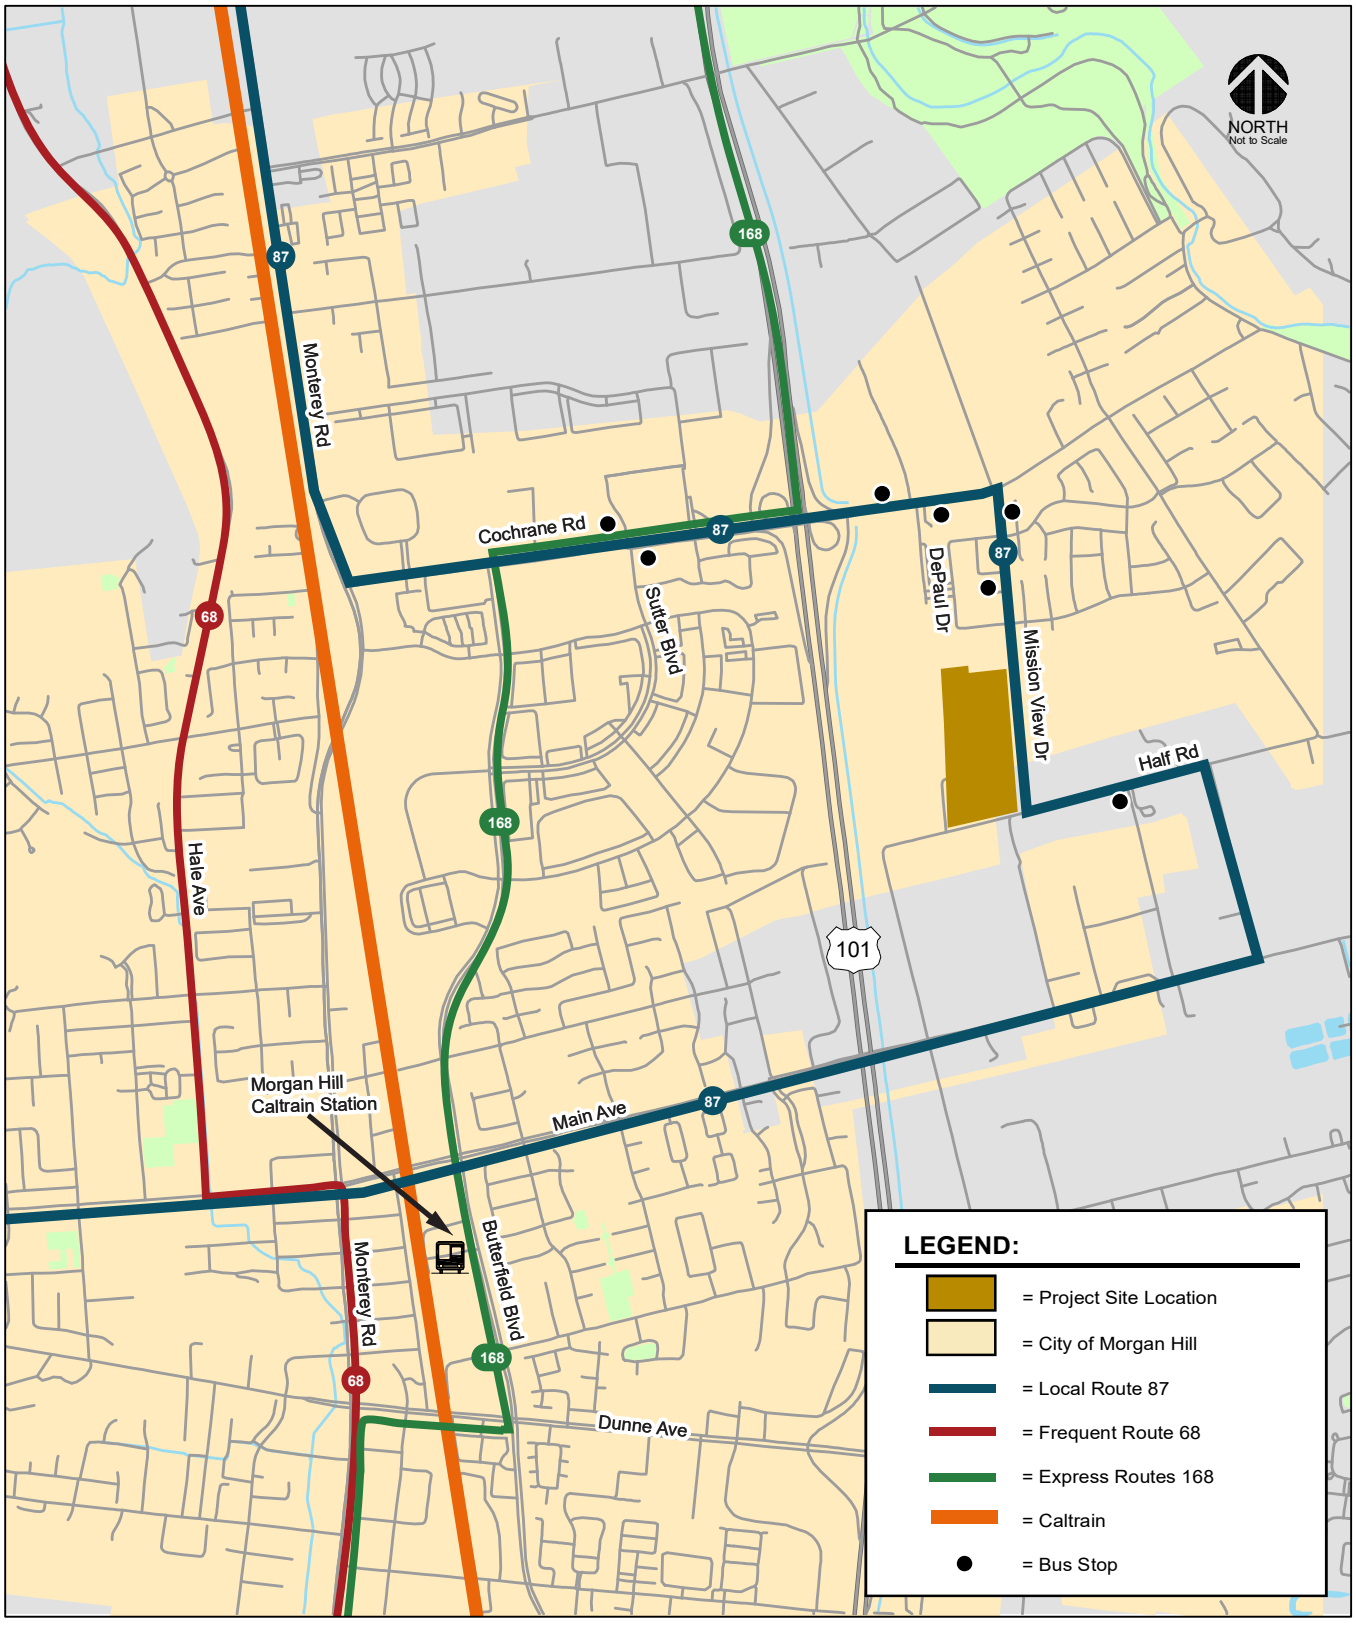
Existing Transit Services



Caltrain

Commuter rail service between San Francisco and Gilroy is provided by Caltrain. The Morgan Hill Caltrain Station is located along Depot Street, with main access and parking off of Butterfield Boulevard, approximately two miles from the project site. At the Morgan Hill Station, Caltrain provides service in only the northbound direction during the AM commute period with 30-minute headways and only in the southbound direction during the PM commute period with 90-minute headways.

3. CEQA VMT Evaluation

This chapter provides an evaluation of the proposed project's effect on Vehicle Miles Traveled (VMT). Pursuant to Senate Bill (SB) 743, the California Environmental Quality Act (CEQA) 2019 Update Guidelines Section 15064.3, subdivision (b) states that VMT will be the metric in analyzing transportation impacts for land use projects for CEQA purposes.

VMT Evaluation Methodology

VMT is the total miles of travel by personal motorized vehicles a project is expected to generate in a day. VMT measures the full distance of personal motorized vehicle trips with one end within the project. Typically, development projects that are farther from other, complementary land uses (such as a business park far from housing) and in areas without transit or active transportation infrastructure (bike lanes, sidewalks, etc.) generate more driving than development near complementary land uses with more robust transportation options. Therefore, developments located in a central business district with high density and diversity of complementary land uses and frequent transit services are expected to internalize trips and generate shorter and fewer vehicle trips than developments located in a suburban area with low density of residential developments and no transit serve in the project vicinity.

The evaluation of the project's effects on VMT was completed using *VTA's VMT Evaluation Tool.* The VMT tool identifies the existing average VMT per capita and VMT per employee for the project area based on the assessor's parcel number (APN) of a project. Based on the project location, type of development, project description, and proposed trip reduction measures, the evaluation tool calculates the project VMT. Projects located in areas where the existing VMT is above the established threshold are referred to as being in "high-VMT areas". Projects in high-VMT areas are required to include a set of VMT reduction measures that would reduce the project VMT to the greatest extent possible.

VMT Policies and Impact Criteria

To adhere to the state's legislation, the City of Morgan Hill is currently developing the framework for new transportation policies based on the implementation of VMT as the primary measure of transportation impacts for CEQA purposes. The new policies will replace the City's current transportation policies that are based on levels of service. However, since the City has not formally adopted its own City-specific VMT policies, this study utilizes VMT analysis methodology and impact

thresholds recommended in the Governor's Office of Planning and Research (OPR) *Technical Advisory on Evaluating Transportation Impacts in CEQA*, December 2018.

Per OPR's technical advisory, VMT per resident (capita) is the recommended metric to evaluate CEQA-related transportation impacts for residential land uses. As stated in the technical advisory, OPR recommends an impact threshold of 15% below the existing VMT levels for residential land uses. OPR allows the existing VMT to be measured as regional or citywide VMT per capita. Therefore, 15% below the city-wide residential VMT per capita is established as the impact threshold for the residential uses of the project.

The VTA's VMT Evaluation Tool indicates that the citywide average VMT per capita is currently 24.64. Therefore, the OPR recommends an impact threshold of 15% below the citywide average VMT per capita equates to 20.94 VMT per capita.

VMT Evaluation

The results of the VMT analysis using the VTA's VMT Evaluation Tool indicate that the existing VMT for residential uses in the project vicinity is 30.46 VMT per capita.

The results also indicate that the project is projected to generate VMT per capita (27.41), which would exceed the OPR's recommended impact threshold of 20.94 VMT per capita. Therefore, the project would result in an impact on the transportation system based on OPR's VMT impact criteria.

The VTA VMT Evaluation Tool output sheets are shown in Figure 5 and also included in Appendix A.

VMT Impacts and Mitigation

Using OPR's impact thresholds, the project would need to implement VMT reduction measures to achieve a 24% reduction (27.41 to 20.94) in its VMT per capita for the proposed residential uses to reduce its impact to less than significant levels.

OPR's recommended 15% below existing VMT impact threshold encourages developments in transit-rich, highly mixed-use areas to implement design features and trip reduction measures to take advantage of existing multi-model infrastructure and land use mixes in reducing trip making and/or trip lengths. However, many communities such as Morgan Hill have very limited multi-modal transportation infrastructure and lack a mix of complementary land uses. The lack of employment in these communities along with minimal transit options results in a greater number and longer commute trips. Therefore, it is highly unlikely that developments like the proposed project in these cities can achieve OPR's recommended 15% reduction in VMT. Therefore, absent of the City adopting its own City-specific VMT policies and impact thresholds, the proposed project's VMT impact must be deemed significant and unavoidable.

Per its condition of approval, the City will however require that the project implement and/or incorporate in its design the following VMT reduction measures to encourage the use of multi-modal travel and reduce the number and length of vehicular trips:

1. The management entity/HOA shall provide fully (100 percent) subsidized annual VTA transit passes for all project homeowners (a maximum of one transit subsidy per residential unit, which would result in up to 269 transit passes per year). This subsidized transit program shall be approved by the City of Morgan Hill's Public Services Director prior to issuance of occupancy.

2. The project must improve the surrounding pedestrian network by including sidewalks which terminate at the common property line, allowing for connections to the adjacent property in the

event there is development in the future. Continuous sidewalks are proposed along the project frontages. The proposed frontage improvements along Mission View Drive, Half Road, and De Paul Drive include sidewalk improvements; each of the street sections will be wide enough to accommodate future bicycle lanes.

3. The proposed development will include 64 bicycle parking spaces.

4.
Traffic Operations Analysis

This chapter describes the traffic operations analysis. The traffic operations analysis provides supplemental analysis for use by the City of Morgan Hill in identifying potential improvement of the transportation system that may be included as part of the project's Conditions of Approval. However, the identified roadway operations and improvements are not required or considered project impacts per CEQA guidelines.

The chapter presents the method by which project traffic is estimated, intersection operations analysis for existing, existing plus project, Year 2030 cumulative conditions, the identification of any adverse effects on study intersections caused by project generated trips, and recommended improvements to alleviate the identified operational issues. In addition, the chapter includes an intersection vehicle queuing analysis, freeway segment capacity evaluation, site access and on-site circulation review, review of the project's effects on bicycle, pedestrian, and transit facilities, and a review of required parking.

Project Description

The 30.5-acre project site is currently vacant and is generally bounded by Half Road to the south, Mission View Drive to the east, future extension of DePaul Drive to the west, and Avenida De Los Padres to the north. The project as proposed will consist of a total of 269 residential units comprised of 149 condos, 56 detached single-family, and 64 duet units. The project would include the extension of DePaul Drive to the south with termination as a cul-de-sac just north of Half Road. Access to the project site would be provided via a full access driveway along Mission View Drive and two full access driveways along the future DePaul Drive extension.

Project Trip Estimates

The magnitude of traffic produced by a new development and the locations where that traffic would appear are estimated using a three-step process: (1) trip generation, (2) trip distribution, and (3) trip assignment. In determining project trip generation, the magnitude of traffic entering and exiting the site is estimated for the AM and PM peak hours. As part of the project trip distribution step, an estimate is made of the directions to and from which the project trips would travel. In the project trip assignment

step, the project trips are assigned to specific streets and intersections in the study area. These procedures are described further in the following sections.

Trip Generation

Through empirical research, data have been collected that correlate to common land uses their propensity for producing traffic. Thus, for the most common land uses there are standard trip generation rates that can be applied to help predict the future traffic increases that would result from a new development. Hexagon prepared trip estimates for the proposed project based on trip generation rates obtained from the Institute of Transportation Engineers' (ITE's) *Trip Generation Manual*, Tenth Edition, 2017. Single-Family Detached Housing (Land Use 210) trip generation rates were used to estimate the number of trips that would be generated by all proposed residential units because the trip-making characteristics of varying types of residential units would be similar due to the limited transit services and employment opportunities within Morgan Hill.

Based on the recommended rates for single-family detached housing (Land Use #210) and the size of the proposed project, it is estimated that the proposed project would generate 2,539 daily trips, with 199 trips (50 inbound and 149 outbound) occurring during the AM peak hour and 266 trips (168 inbound and 98 outbound) occurring during the PM peak hour. The trip generation estimates for the proposed project are shown in Table 1.

Trip Distribution and Assignment

The trip distribution patterns for project-generated traffic for the proposed land use were estimated based on existing travel patterns on the surrounding roadway system, locations of complementary land uses, and use of the City of Morgan Hill Traffic Demand Forecasting (TDF) Model. The peak-hour trips associated with the proposed project were added to the transportation network in accordance with the distribution patterns discussed above. The project trip distribution patterns are shown graphically in Figure 6. Figure 7 shows the assignment of project traffic on the local transportation network. A tabular summary of project traffic at each study intersection is contained in Appendix C.

Intersection Operations Methodology

This section presents the methods used to evaluate traffic operations at each of the study intersections for each study scenario. It includes descriptions of the data requirements, the analysis methodologies, and the applicable level of service standards, and the criteria defining adverse effects at the study intersections. The intersection operations analysis is intended to quantify the operations of intersections and to identify potential negative effects due to the addition of project traffic. However, a potential adverse effect on a study intersection is not considered a CEQA impact metric.

Study Intersections

The traffic operations analysis includes an analysis of AM and PM peak-hour traffic conditions for ten signalized intersections and three unsignalized intersections. The study intersections are identified below.

1. Cochrane Road and Sutter Boulevard
2. Cochrane Road and Madrone Parkway/Cochrane Plaza
3. Cochrane Road and US 101 Southbound Ramps
4. Cochrane Road and US 101 Northbound Ramps
5. Cochrane Road and De Paul Drive

13. Monterey Road and Main Avenue

Traffic conditions at all of the study intersections were analyzed for the weekday AM and PM peak hours. The weekday AM peak hour of traffic is generally between 7:00 AM and 9:00 AM and the weekday PM peak hour is typically between 4:00 PM and 6:00 PM. It is during these periods that the most congested traffic conditions occur on a typical weekday. Traffic conditions were evaluated for the conditions described below:

Scenario 1: *Existing Conditions.* Existing conditions represent existing peak-hour traffic volumes on the existing roadway network. New traffic counts could not be collected due to the current COVID-19 pandemic affecting normal travel traffic patterns. Therefore, traffic counts collected prior to the COVID-19 pandemic in 2018-2019 as part of the Morgan Hill Technology Center development project were used in this analysis.

Scenario 2: *Existing Plus Project Conditions*. Project-generated traffic volumes were added to existing traffic volumes to estimate existing plus project conditions. Existing plus project conditions were evaluated relative to existing conditions in order to determine potential project impacts.

Scenario 3: *Year 2030 Cumulative without Project Conditions.* Year 2030 Cumulative without project conditions represent traffic growth projected to occur in the Year 2030 without the proposed project on the existing transportation network. Projected 2030 traffic growth was developed by interpolating the projected Year 2035 traffic growth.

Scenario 4: *Year 2030 Cumulative with Project Conditions.* Project-generated traffic volumes were added to Year 2030 Cumulative without project to estimate Year 2030 Cumulative with project conditions. Year 2030 Cumulative with project conditions were evaluated relative to Year 2030 Cumulative without project conditions in order to determine potential project impacts.

Data Requirements

The data required for the analysis were obtained from recently completed traffic studies, the City of Morgan Hill, the 2018 CMP Monitoring and Conformance Report, and field observations. The following data were collected from these sources:

- lane configurations
- existing traffic volumes
- signal timing and phasing
- average speeds on freeway segments
- Year 2035 traffic forecasts

Lane Configurations

The existing lane configurations at the study intersections were determined by observations in the field and are shown in Figure 8. It is assumed in this analysis that the roadway network and intersection configurations under existing plus project and Year 2030 cumulative conditions would be the same as described under existing conditions with the exception of the following improvements.

Extension of DePaul Drive. As part of the project, DePaul Drive is proposed to be extended by approximately 2,280 feet south to provide direct access to the project site via two full access driveways. As proposed, DePaul Drive will terminate as a cul-de-sac just north of Half Road.

Mission View Drive and Half Road. All-way stop signs installation at this intersection is planned by the County and should be completed in the near future. Therefore, this intersection is assumed to be one-way stop-controlled under existing conditions and all-way stop-controlled under Year 2030 cumulative conditions.

Traffic Volumes

Existing Traffic Volumes

Existing conditions represent existing peak-hour traffic volumes on the existing roadway network. New traffic counts could not be collected due to the current COVID-19 pandemic affecting normal travel traffic patterns. Therefore, traffic counts collected prior to the COVID-19 pandemic in 2018-2019 as part of the Morgan Hill Technology Center development project were used in this analysis. The existing peak-hour intersection volumes are shown in Figure 9. Intersection turning-movement counts conducted for this analysis are presented in Appendix B.

Year 2030 Cumulative Land Use and Traffic Forecasts

Year 2030 Cumulative traffic volumes were developed based on traffic forecasts produced for the City of Morgan Hill 2035 General Plan using the City's Traffic Demand Forecasting (TDF) model. Year 2035 General Plan traffic forecasts include land use growth and transportation improvements associated with the buildout of the City's General Plan.

The 2035 General Plan forecasts also include trips associated with 345 residential units per the adopted General Plan land use for the project site. Therefore, the trips associated with the adopted General Plan land use for the project site were removed from the projected Year 2035 traffic volumes. To develop Year 2030 Cumulative without project condition traffic volumes, Hexagon prepared trip estimates for the adopted GP land uses for comparison with the proposed project. When compared with the land use included in the City's General Plan, the proposed project would result in reductions of 56 AM and 76 PM peak hour trips for the project site. The trip generation estimates for the proposed and adopted General Plan land uses for the site are presented in Table 2.

The Year 2030 Cumulative without project traffic volumes were then estimated using a growth method that involved adding a proportion (15 Years or 75%) of the 2035 projected growth, with the removal of the trips associated with the adopted General Plan land uses for the project, to existing traffic counts at each of the study intersections. Figure 10 shows the Year 2030 Cumulative without project traffic volumes. Appendix C lists each of the components used to tabulate cumulative traffic volumes at each study intersection.

Figure 8
Existing Lane Configurations

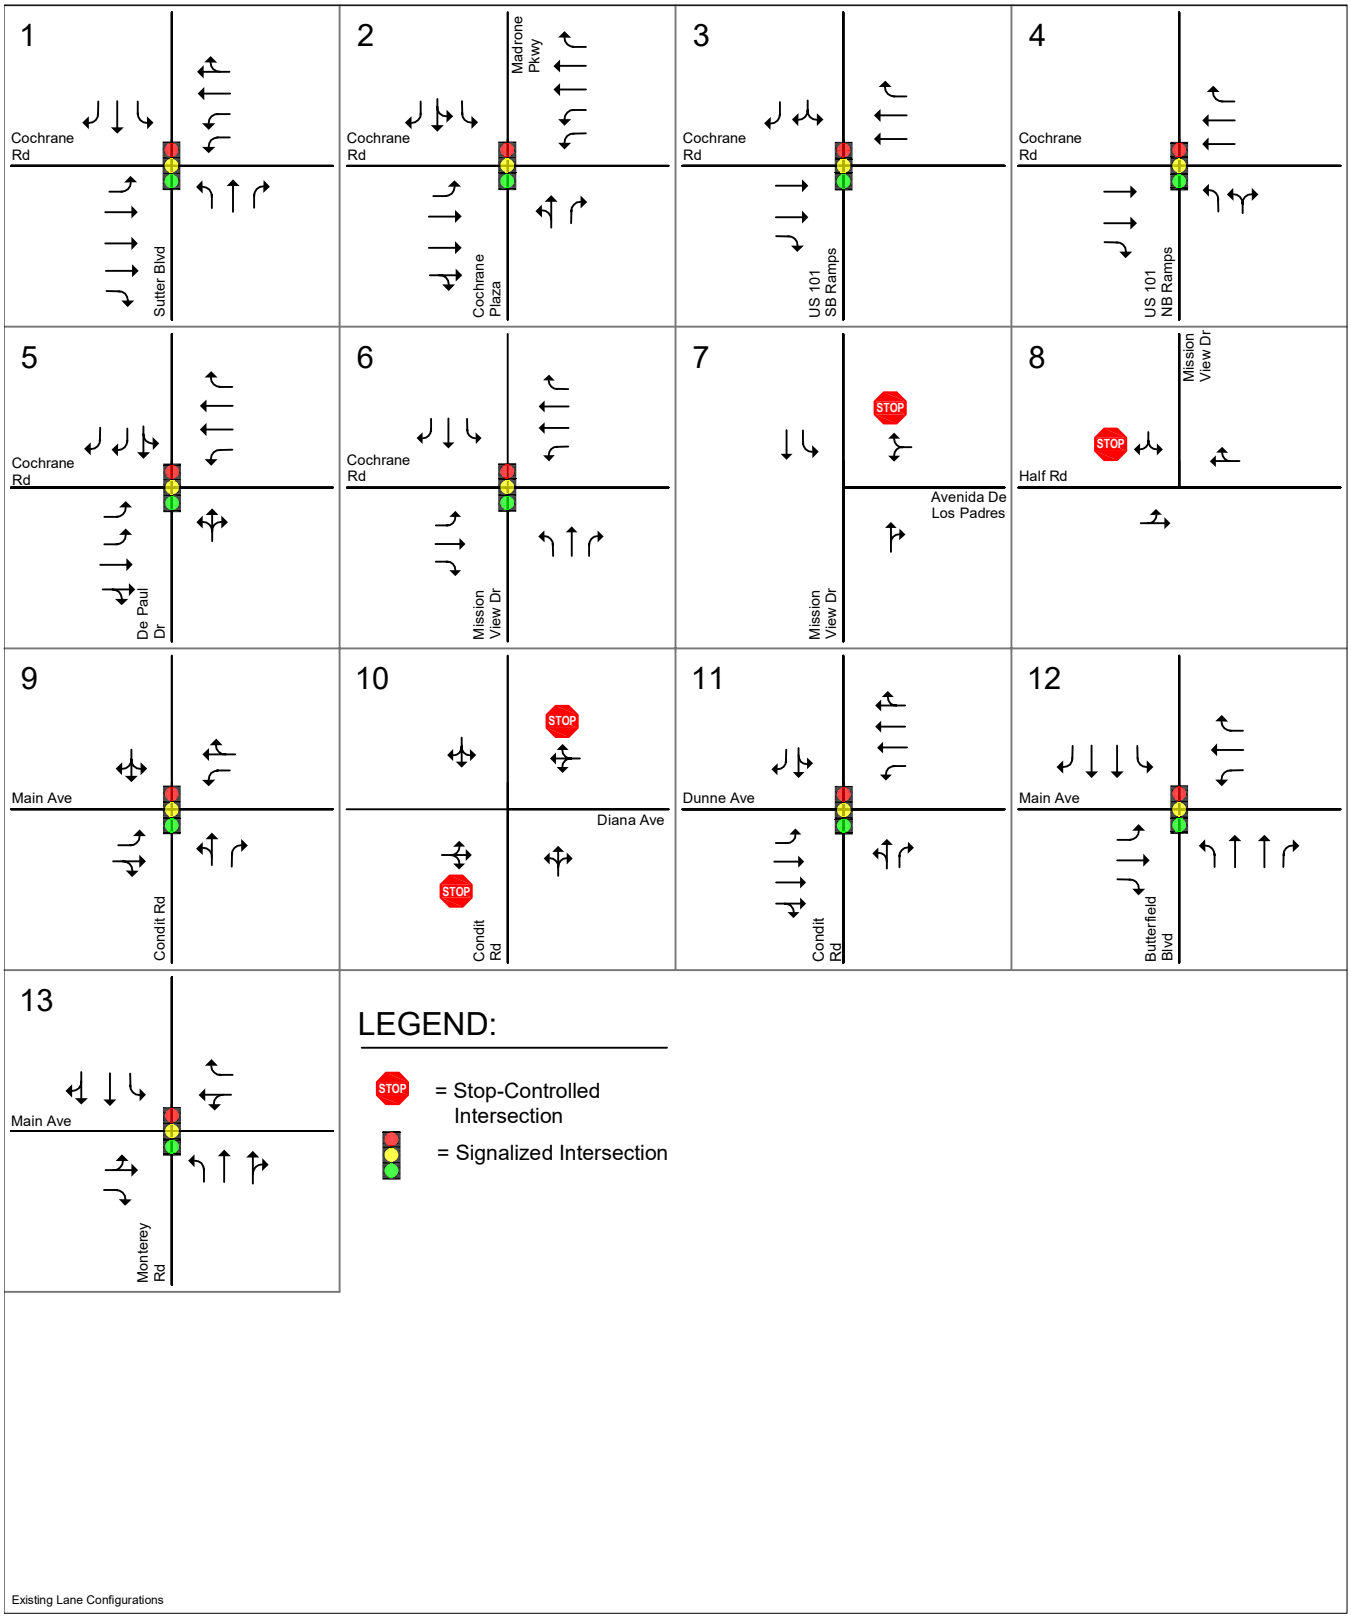

Figure 9
Existing Traffic Volumes

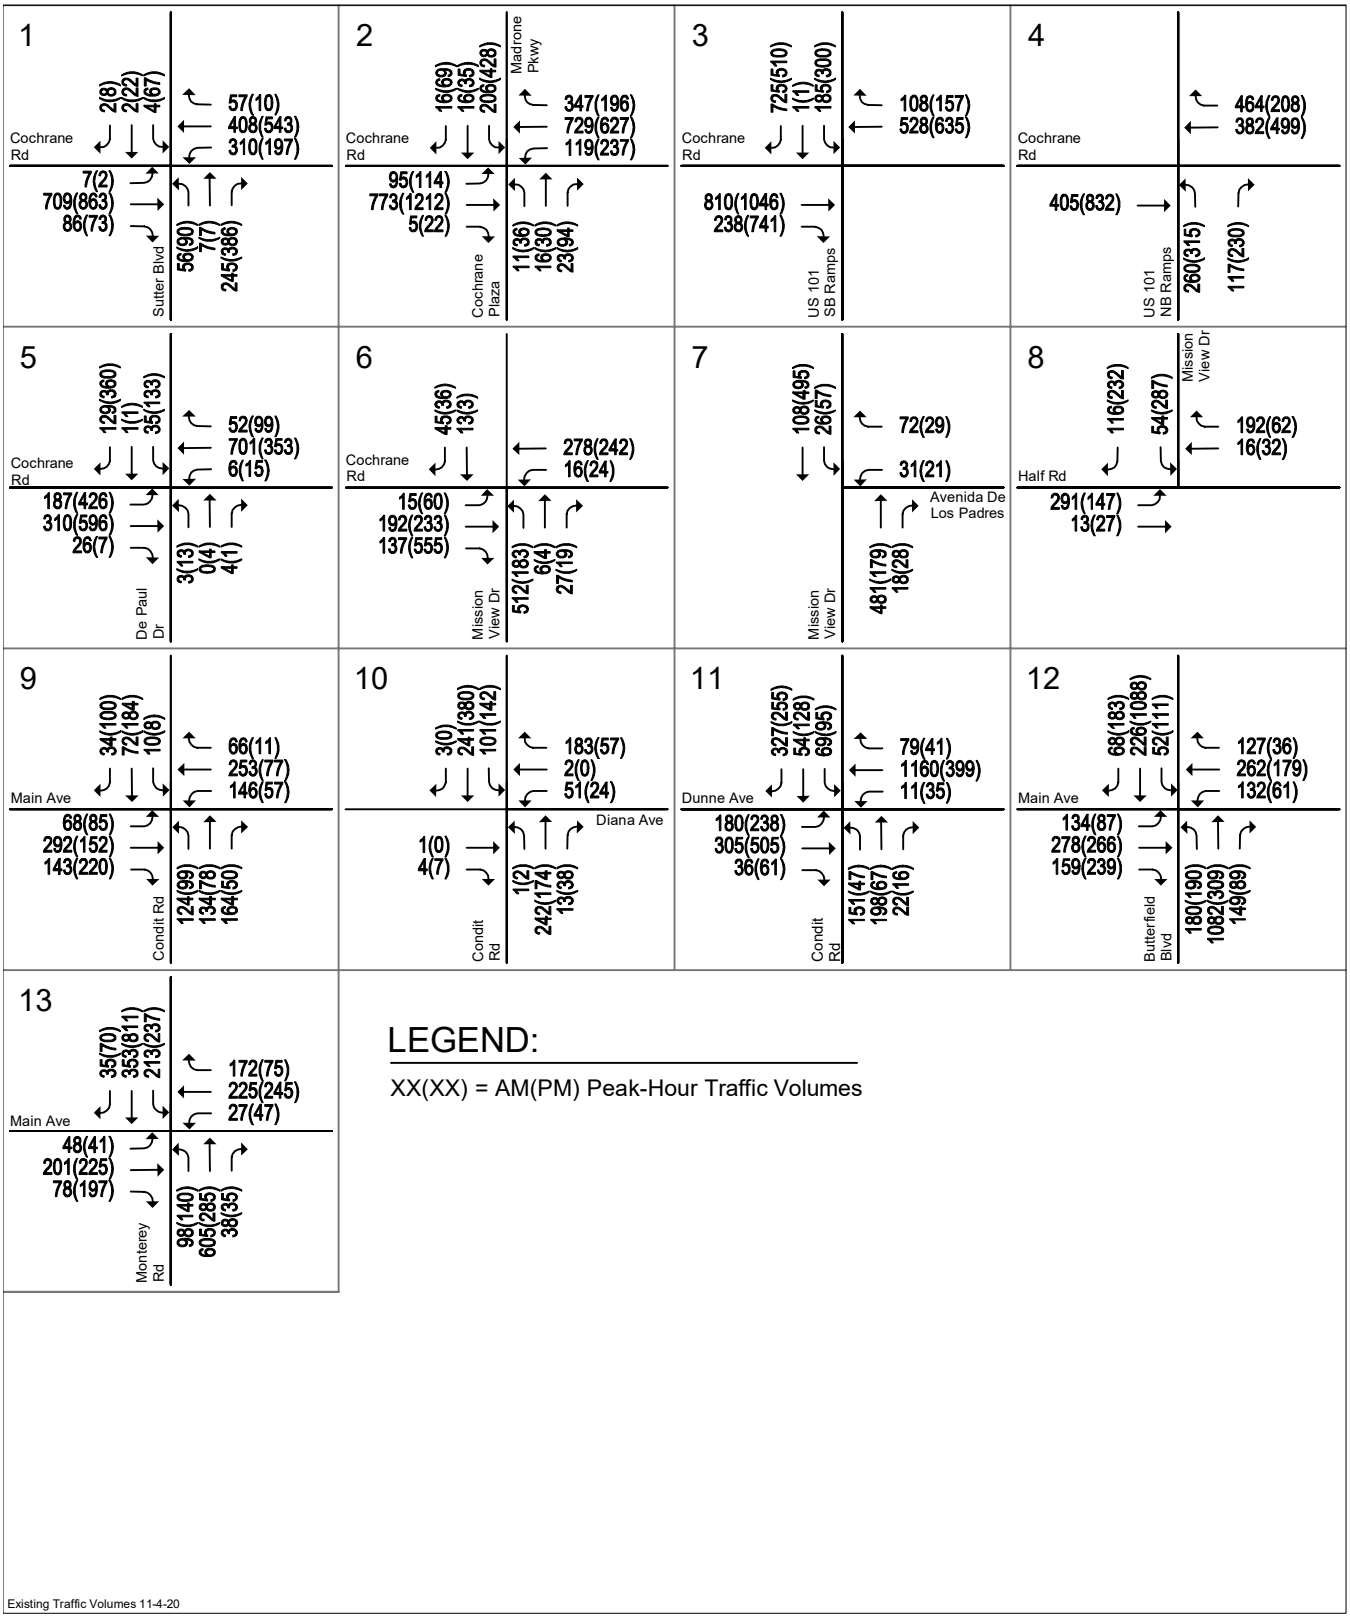

Figure 10
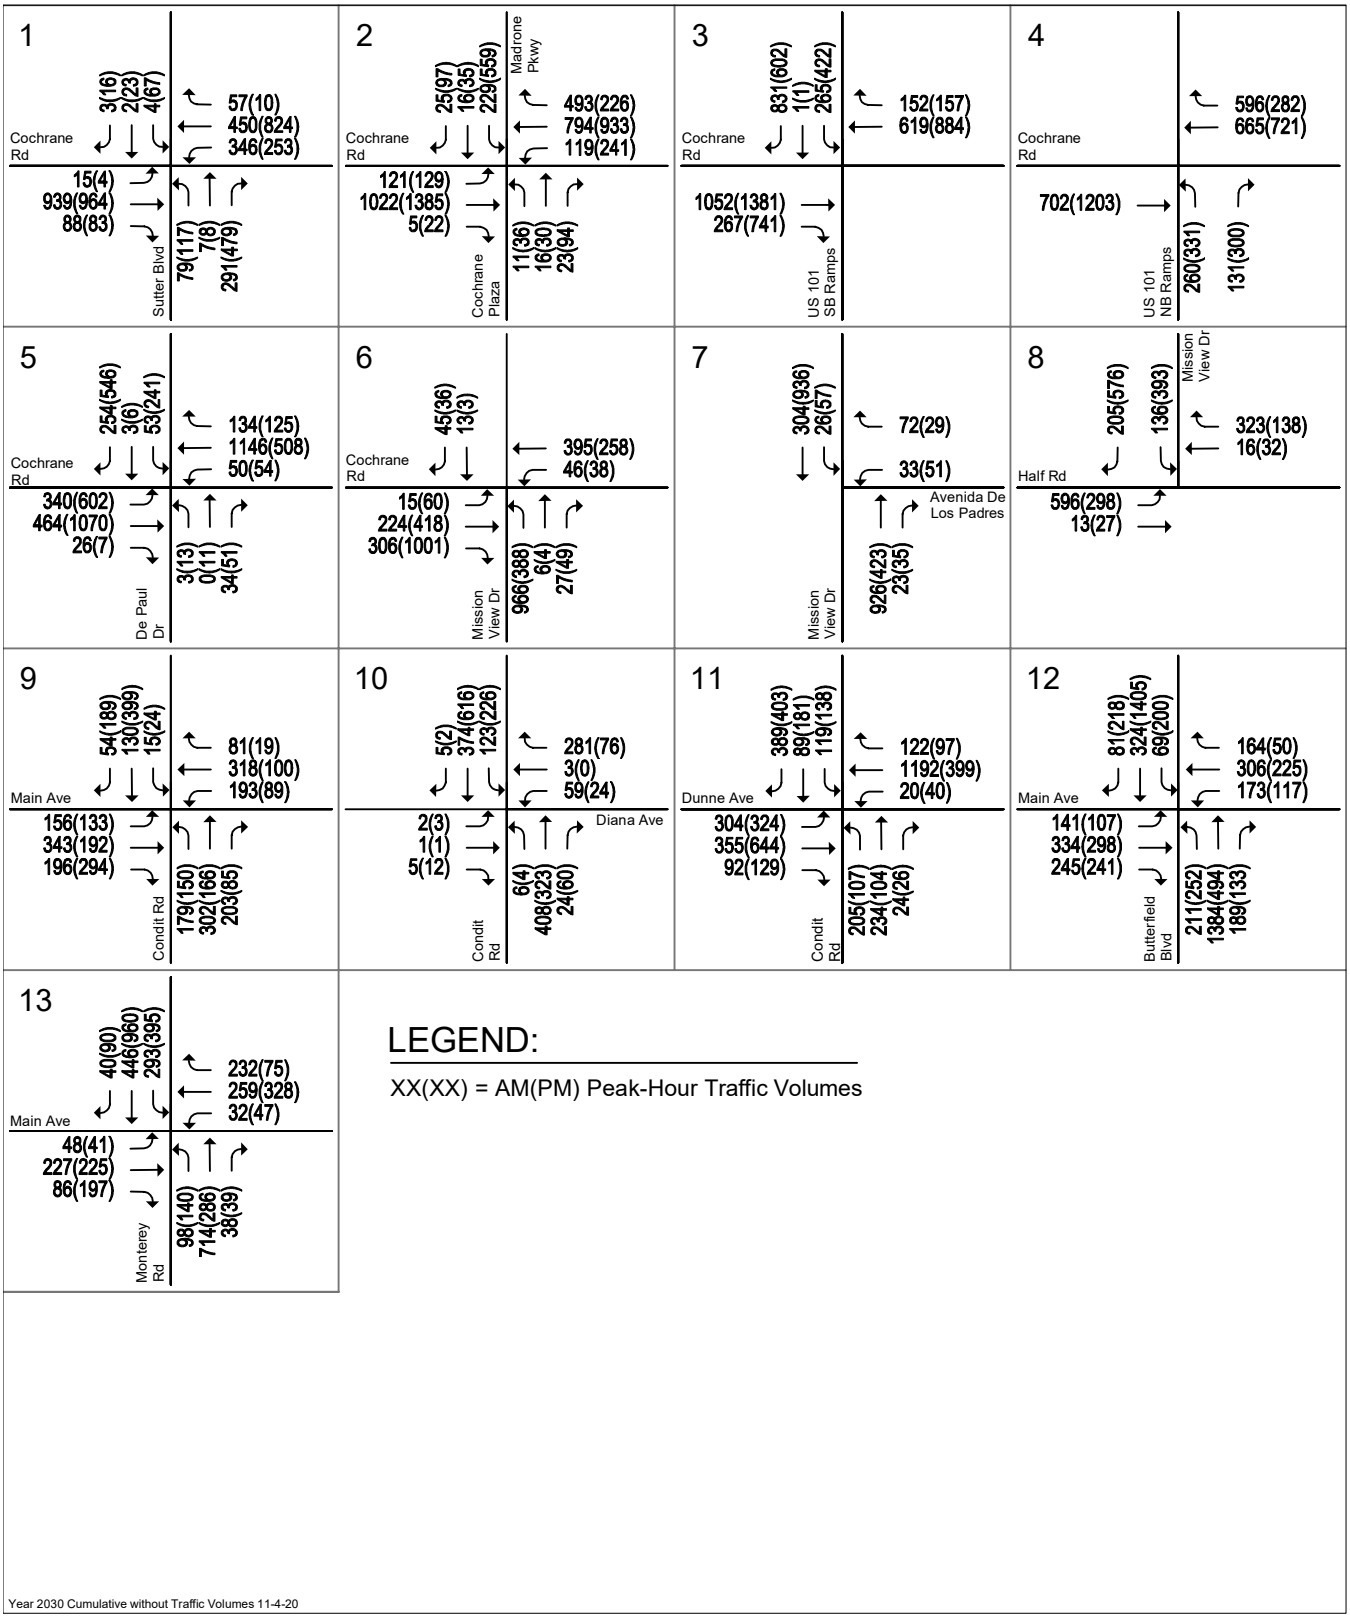
Year 2030 Cumulative without Project Traffic Volumes



Existing and Year 2030 Cumulative Plus Project Traffic Volumes

Project trips as represented in the project trip assignment were added to the existing traffic and Year 2030 Cumulative without project traffic volumes to obtain existing and Year 2030 Cumulative with project traffic volumes. The existing plus project and Year 2030 Cumulative with project traffic volumes are shown in Figures 11 and 12, respectively.

Intersection Level of Service Standards and Analysis Methodologies

Traffic conditions at the study intersections were evaluated using level of service (LOS). *Level of Service* is a qualitative description of operating conditions ranging from LOS A, or free-flow conditions with little or no delay, to LOS F, or jammed conditions with excessive delays. The analysis methods are described below.

Signalized Intersections

Signalized study intersections are subject to the City of Morgan Hill's level of service standards. The City of Morgan Hill's level of service methodology is TRAFFIX, which is based on the 2000 *Highway Capacity Manual* (HCM) method for signalized intersections. TRAFFIX evaluates signalized intersections operations based on average delay time for all vehicles at the intersection. Since TRAFFIX is also the CMP-designated intersection level of service methodology, the City of Morgan Hill methodology employs the CMP defaults values for the analysis parameters, which include adjusted saturation flow rates to reflect conditions in Santa Clara County. All intersections within the City of Morgan Hill are required to meet the City's LOS standard of LOS D, with the exception of the following:

- **LOS F** for Downtown intersections and segments including at Main/Monterey, along Monterey Road between Main and Fifth Street, and along Depot Street at First through Fifth Street;

  LOS E for the following intersections and freeway zones:

  - Main Avenue and Del Monte Avenue
  - Main Avenue and Depot Street
  - Dunne Avenue and Del Monte Avenue
  - Dunne Avenue and Monterey Avenue
  - Dunne Avenue and Church Street
  - Dunne Avenue and Depot Street
  - Cochrane Road and Monterey Road
  - Tennant Avenue and Monterey Road
  - Tennant Avenue and Butterfield Boulevard
  - Cochrane Road Freeway Zone: from Madrone Parkway/Cochrane Plaza to Cochrane Road/DePaul Drive
  - Dunne Avenue Freeway Zone: from Walnut Grove Drive/East Dunne Avenue to Condit Road/East Dunne Avenue
  - Tennant Avenue Freeway Zone: from Butterfield Boulevard/Tennant Avenue to Condit Road/Tennant Avenue

The correlation between average delay and level of service for signalized intersections is shown in Table 3.

Figure 11
Existing Plus Project Traffic Volumes

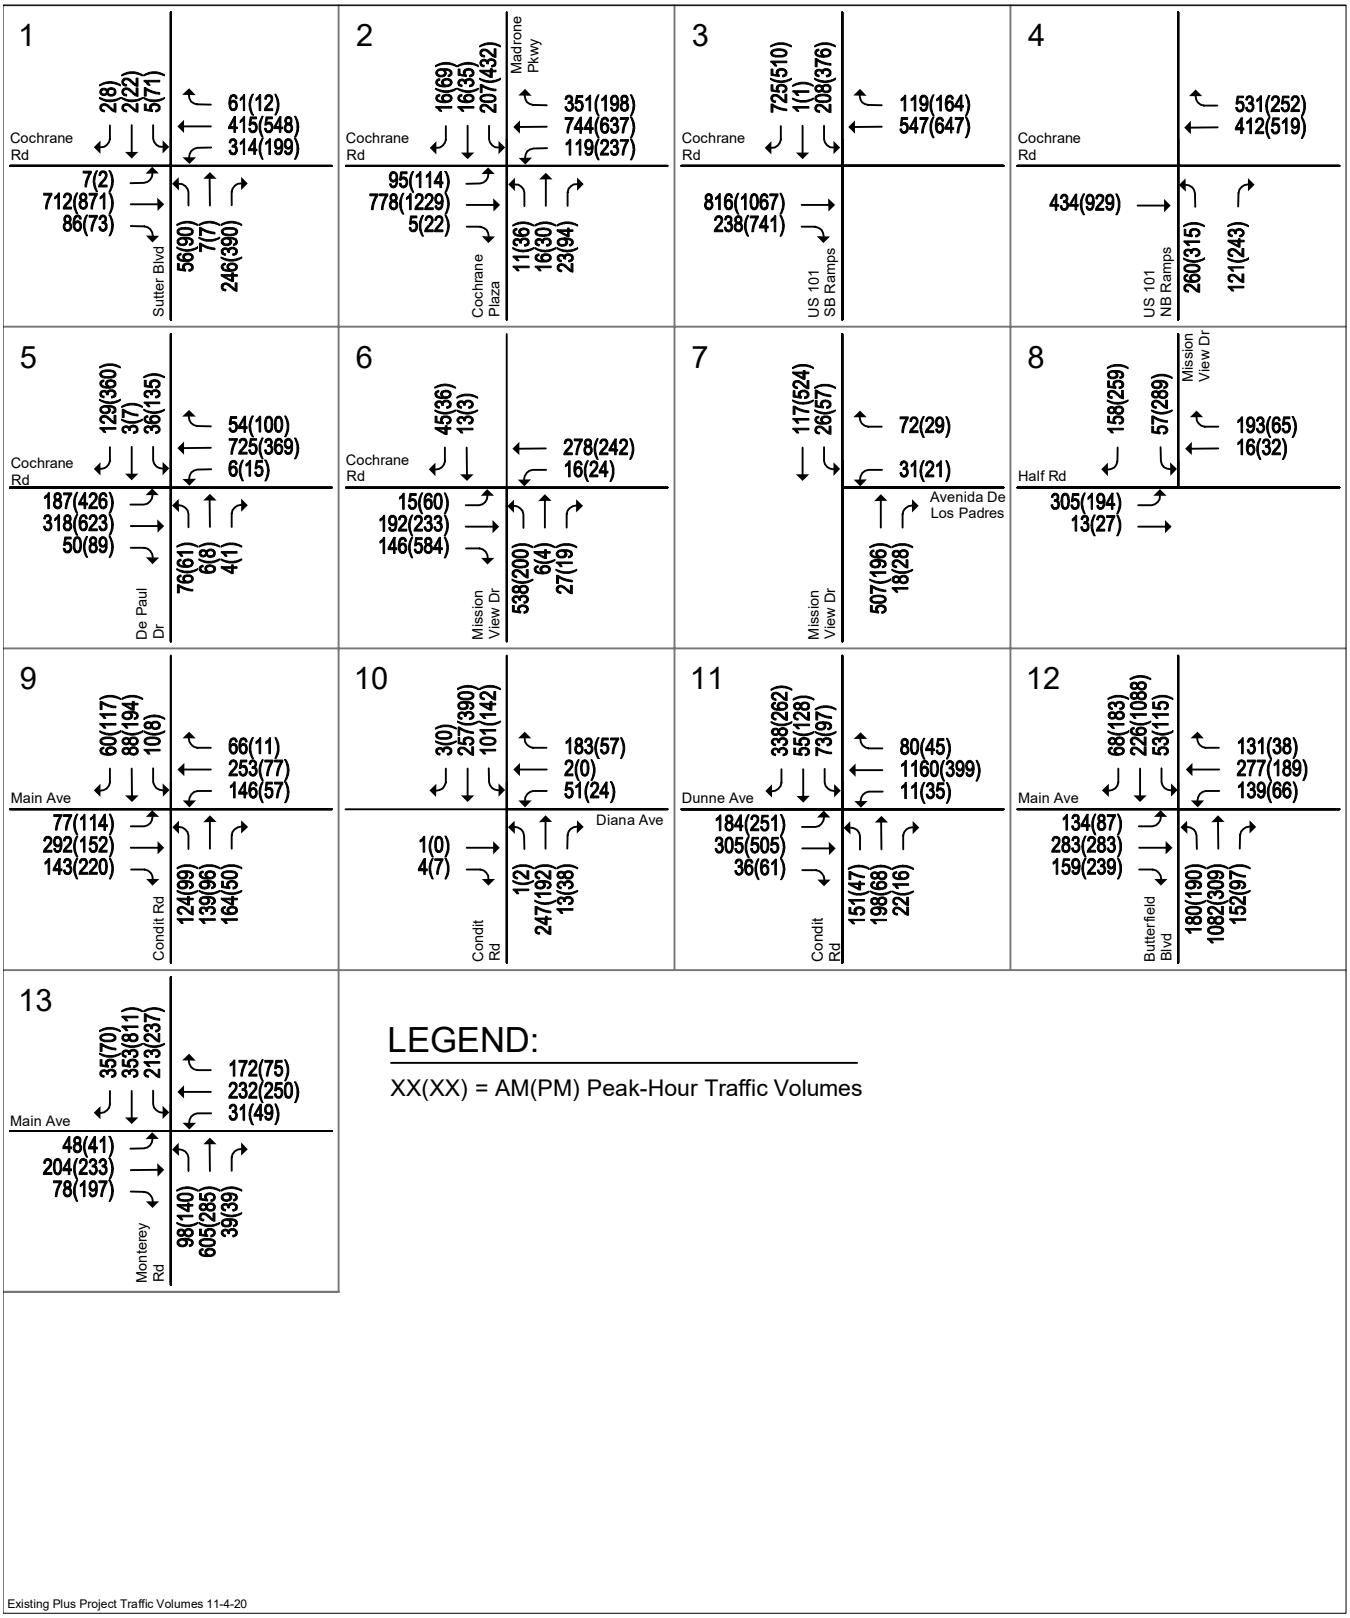


Figure 12
Year 2030 Cumulative with Project Traffic Volumes

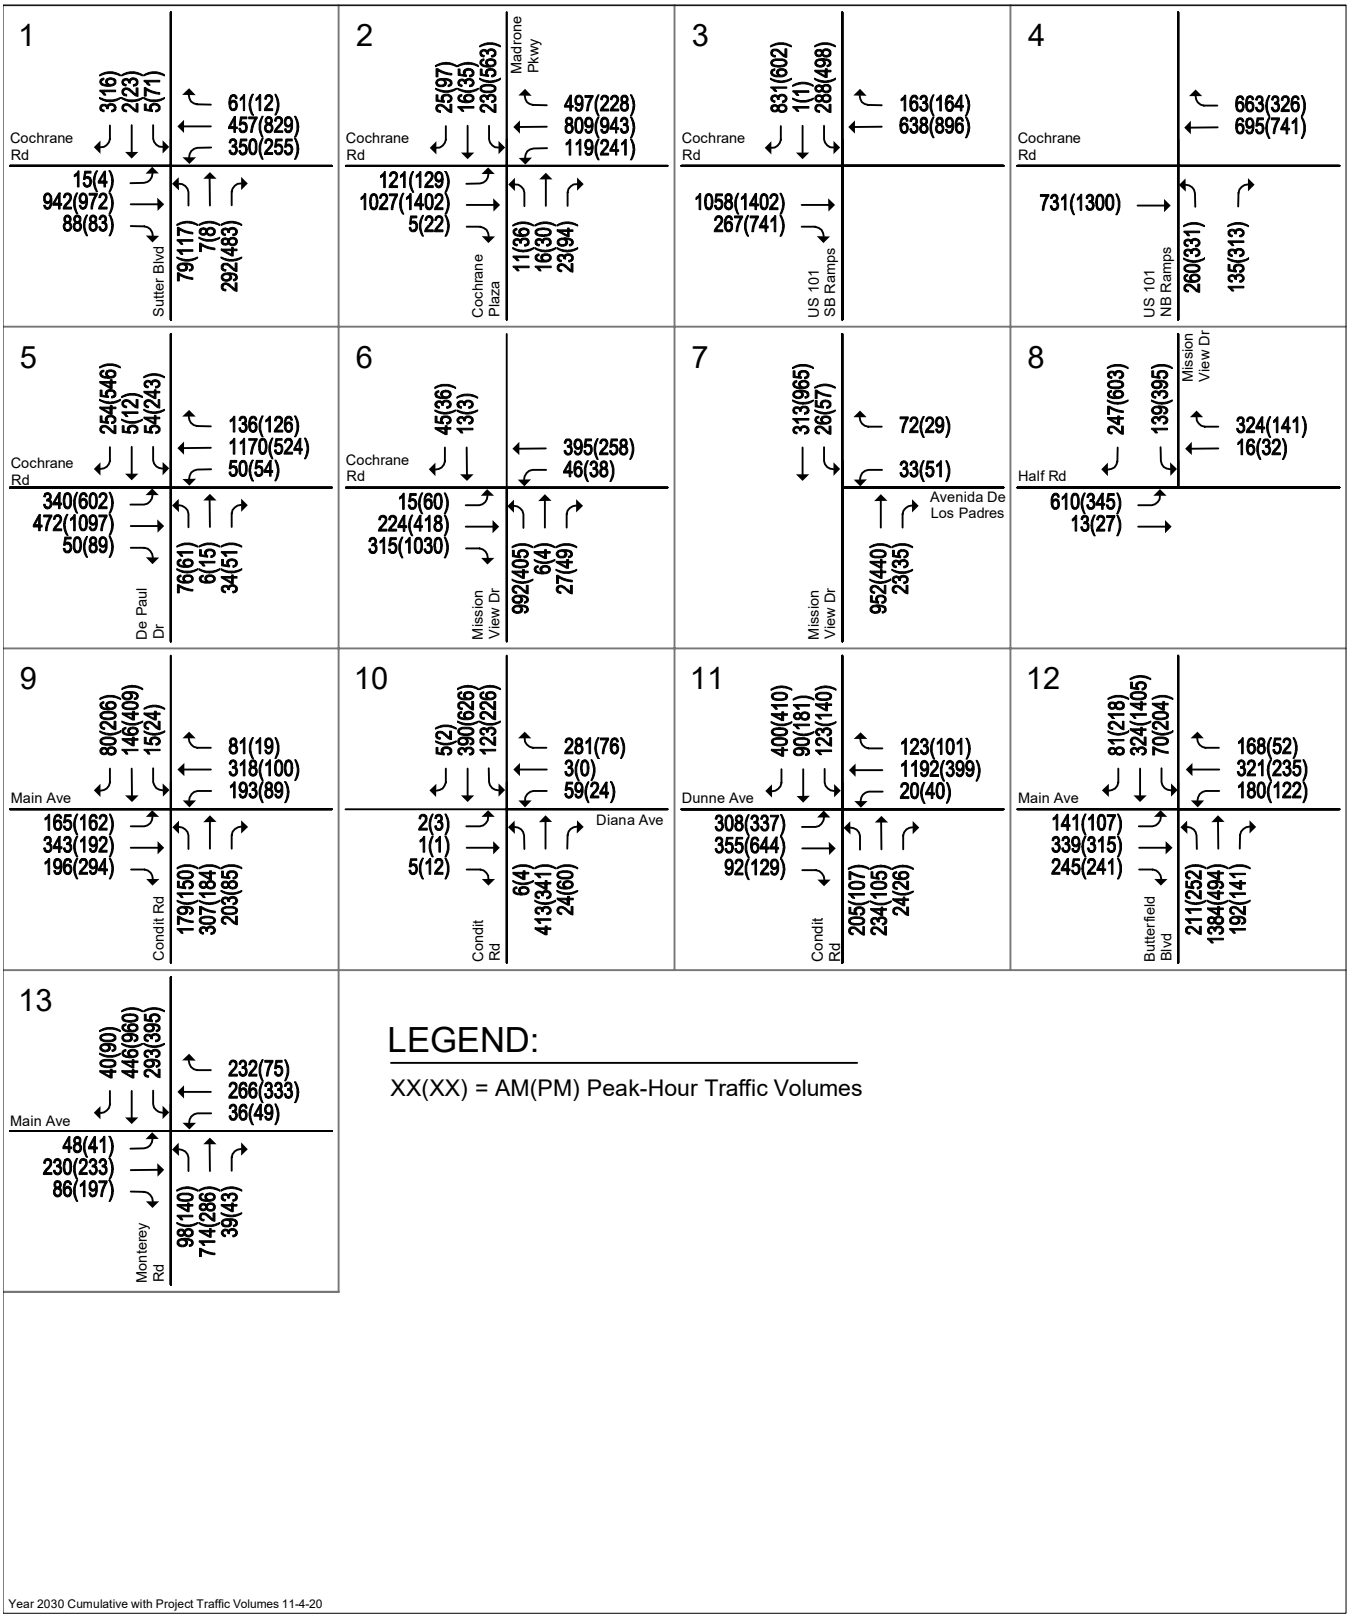

Table 3
Signalized Intersection Level of Service Definitions Based on Control Delay

Level of Service	Description	Average Control Delay per Vehicle (sec.)
A	Operations with very low delay occurring with favorable progression and/or short cycle lengths.	up to 10.0
B	Operations with low delay occurring with good progression and/or short cycle lengths.	10.1 to 20.0
C	Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	20.1 to 35.0
D	Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.	35.1 to 55.0
E	Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences. This is considered to be the limit of acceptable	55.1 to 80.0
F	Operation with delays unacceptable to most drivers occurring due to oversaturation, poor progression, or very long cycle lengths.	Greater than 80.0

Unsignalized Intersections

The methodology used to determine the level of service for unsignalized intersections is also TRAFFIX and the *2000 HCM* methodology for unsignalized intersection analysis. This method is applicable for both two-way and all-way stop-controlled intersections. For the analysis of stop-controlled intersections, the *2000 HCM* methodology evaluates intersection operations on the basis of average control delay time for all vehicles on the stop-controlled approaches. For the purpose of reporting the level of service for one- and two-way stop-controlled intersections, the delay and corresponding level of service for the stop-controlled minor street approach with the highest delay is reported. For all-way stop-controlled intersections, the reported average delay and the corresponding level of service is the average for all approaches at the intersection. The City uses a minimum acceptable level of service standard of LOS D for unsignalized intersections, in accordance with its adopted threshold of significance in its Guidelines for Preparation of Transportation Impact Reports. The correlation between average delay and level of service for unsignalized intersections is shown in Table 4.

Signal Warrants

The level of service analysis at unsignalized intersections is supplemented with an assessment of the need for signalization of the intersection. The need for signalization of unsignalized intersections is assessed based on the Peak Hour Volume Warrant (Warrant 3) described in the *California Manual on Uniform Traffic Control Devices for Streets and Highways (CA MUTCD)*, Part 4, Highway Traffic Signals, 2014. This method makes no evaluation of the intersection level of service but simply provides an indication of whether vehicular peak hour traffic volumes are, or would be, sufficient to justify the installation of a traffic signal. The decision to install a traffic signal should not be based purely on the warrants alone. Instead, the installation of a signal should be considered, and further analysis

Table 4
Unsignalized Intersection Level of Service Definitions Based on Control Delay

Level of Service	Description	Average Control Delay per Vehicle (sec.)
A	Operations with very low delays occurring with favorable progression.	up to 10.0
B	Operations with low delays occurring with good progression.	10.1 to 15.0
C	Operations with average delays resulting from fair progression.	15.1 to 25.0
D	Operation with longer delays due to a combination of unfavorable progression of high V/C ratios.	25.1 to 35.0
E	Operation with high delay values indicating poor progression and high V/C ratios. This is considered to be the limited of acceptable delay.	35.1 to 50.0
F	Operation with delays unacceptable to most drivers occurring due to oversaturation and poor progression.	Greater than 50.0

Source: Transportation Research Board, 2000 Highway Capacity Manual, (Washington, D.C., 2000).

performed when one or more of the warrants are met. Additionally, engineering judgment is exercised on a case-by-case basis to evaluate the effect a traffic signal will have on certain types of accidents and traffic conditions at the subject intersection as well as at adjacent intersections. Intersections that meet the peak hour warrant are subject to further analysis before determining that a traffic signal is necessary. Other options such as traffic control devices, signage, or geometric changes may be preferable based on existing field conditions.

Definition of Adverse Intersection Operations Effects

According to the City of Morgan Hill level of service guidelines, a development is said to create a significant adverse effect on traffic conditions at a signalized intersection if for either peak hour:

1. The level of service at the intersection degrades from an acceptable level (LOS D or LOS E as identified above) under no project conditions to an unacceptable level (LOS E or F) under project conditions, or
2. The level of service at the intersection is an unacceptable level (LOS E or F as identified above) under no project conditions and the addition of project trips causes the average critical delay to increase by four (4) or more seconds *and* the volume-to-capacity ratio (V/C) to increase by 0.01.

An exception to this rule applies when the addition of project traffic reduces the amount of average delay for critical movements (i.e., the change in average delay for critical movements is negative). In this case, the threshold of significance is an increase in the critical V/C value by 0.01 or more.

Definition of Adverse Unsignalized Intersection Operations Effects

Unsignalized intersections within the City of Morgan Hill have a minimum operating level of LOS D. According to the City of Morgan Hill level of service guidelines, a development is said to have a significant adverse effect on traffic conditions at an unsignalized intersection if for either peak hour the addition of project traffic causes the worst approach delay to degrade to LOS E or F ***and*** the traffic volumes at the intersection are sufficiently high to satisfy the peak hour volume warrant.

Intersection Operations Analysis

Existing Plus Project Intersection Operations Analysis

The results of the intersection level of service and signal warrant analyses under existing and existing plus project conditions are summarized in Table 5. The level of service calculation sheets are included in Appendix D. The peak-hour signal warrant sheets are contained in Appendix E.

Existing Conditions

The results of the level of service analysis indicate that, measured against the City of Morgan Hill level of service standards, all the study intersections currently operate at an acceptable level of service, LOS D or better, under existing conditions during each of the peak hours analyzed.

The results of the signal warrant analysis indicate that the existing traffic volumes at the intersection of Mission View Drive and Cochrane Road were sufficient to warrant the installation of a traffic signal during the AM and PM peak hours under existing conditions, based on counts conducted in May 2018. However, a traffic signal has since been installed at the intersection and is currently operational. Additionally, the intersection of Condit Road and Diana Avenue currently also has volumes that warrant signalization. All other unsignalized study intersections currently have traffic conditions that fall below the thresholds that warrant signalization.

Existing Plus Project Conditions

The results of the level of service analysis indicate that, when measured against the City of Morgan Hill level of service standards, all of the study intersections are projected to operate at acceptable levels of service, LOS D or better, under existing plus project conditions during each of the peak hours analyzed.

The results of signal warrant analysis indicate that the intersection of Condit Road and Diana Avenue is projected to have volumes that would warrant signalization. However, the intersection is projected to operate within the applicable level of service standards. Therefore, the project would not have an adverse effect on operations at the intersection based on the City of Morgan Hill's standards. All other unsignalized study intersections are projected to have traffic conditions that fall below the thresholds that warrant signalization.

Year 2030 Cumulative with Project Intersection Operations Analysis

The results of the intersection level of service and signal warrant analyses under Year 2030 Cumulative without and with project are summarized in Table 6.

The results of the level of service analysis indicate that the following five intersections would operate at unacceptable levels of service (LOS E or F) during Year 2030 Cumulative without and with project during at least one peak hour when measured against the City of Morgan Hill's level of service standards of LOS D:

				PM	05/08/18	--	49.1	D	--	49.8	D	0.8	0.009

Notes:
[1]AWSC = All-Way Stop-Controlled; TWSC = Two-Way Stop-Controlled
[2]The reported delay and corresponding level of service for signalized intersections represent the average delay for all approaches at the intersection.
The reported delay and corresponding level of service for one- and two-way stop-controlled intersections are based on the stop-controlled approach with the highest delay.
Bold indicates unacceptable level of service or signal warrant met.
Bold and boxed indicate adverse effect on operations.

6. Cochrane Road and Mission View Drive (AM and PM Peak Hours)
7. Mission View Drive and Avenida De Los Padres (unsignalized) (PM Peak Hour)
8. Mission View Drive and Half Road (unsignalized) (PM Peak Hour)
9. Main Avenue and Condit Road (PM Peak Hour)
10. Condit Road and Diana Avenue (unsignalized) (AM Peak Hour)

Additionally, the intersection of Mission View Drive and Half Road is projected to operate at LOS D during the AM peak-hour under Year 2030 cumulative conditions and degrade to LOS E with the addition of project traffic.

All of the remaining study intersections are projected to operate at acceptable levels of service under Year 2030 Cumulative without and with project, during each of the peak hours analyzed.

The results of the signal warrant analyses indicate the following two intersections are projected to have traffic volumes under Year 2030 Cumulative without and with project that would meet thresholds that warrant signalization during at least one peak hour.

8. Mission View Drive and Half Road (unsignalized) (AM & PM Peak Hours)
10. Condit Road and Diana Avenue (unsignalized) (AM & PM Peak Hour)

All other unsignalized study intersections are projected to have traffic conditions that fall below the thresholds that warrant signalization.

Based on the City's operating standards, the proposed project would have an adverse effect on intersection operations at the following four study intersections.

6. Mission View Drive and Cochrane Road (AM & PM Peak Hours)
8. Mission View Drive and Half Road (unsignalized) (AM & PM Peak Hours)
9. Condit Road and Main Avenue (PM Peak Hour)
10. Condit Road and Diana Avenue (unsignalized) (AM Peak Hour)

Adverse Intersection Operations Effects and Potential Improvements

This section discusses the adverse intersection operation effects identified under Year 2030 Cumulative with project conditions. Included are descriptions of the adverse effects on intersection operations and potential improvement measures that may be included as part of the project's Conditions of Approval. However, the identified roadway operations and improvements are not required or considered project impacts per CEQA guidelines.

6. Cochrane Road and Mission View Drive

This intersection is projected to operate at an unacceptable LOS F and E during the AM and PM peak hours, respectively, under Year 2030 Cumulative without project conditions. Traffic associated with the proposed project would cause the critical delay to increase by more than four seconds and the volume-to-capacity ratio (V/C) to increase by more than 0.01 during both the AM and PM peak hours. This constitutes an adverse effect on intersection operations based on the City of Morgan Hill's level of service standards.

The addition of a second northbound left-turn lane on Mission View Drive and a cycle length adjustment would be necessary to improve intersection operations. The addition of the second northbound left-turn lane will require lane striping and signal modification but will fit within the existing curb-to-curb pavement width on Mission View Drive. Implementation of this improvement would improve the intersection's level of service to LOS C during both the AM and PM peak hours under Year 2030 Cumulative with project conditions.

8. Mission View Drive and Half Road

This intersection is projected to operate at an unacceptable LOS F during the PM peak hour under Year 2030 Cumulative without and with project conditions. Furthermore, this intersection is projected to operate at an acceptable LOS D during the AM peak hour under Year 2030 Cumulative without conditions and degrade to LOS E with the addition of project traffic. Additionally, the peak-hour traffic signal warrant checks indicate that the intersection would have traffic volumes that meet thresholds that warrant signalization during both the AM and PM peak hours under Year 2030 Cumulative without and with project conditions. This constitutes an adverse effect on intersection operations based on the City of Morgan Hill's level of service standards.

The signalization of the intersection would be necessary to improve intersection operations. Implementation of a traffic signal at this location would improve the level of service to LOS C during both the AM and PM peak hours under Year 2030 Cumulative with project. This intersection is under the jurisdiction of both the City of Morgan Hill and Santa Clara County. Therefore, implementation of the recommended improvements will require City and County approval.

9. Main Avenue and Condit Road

This intersection is projected to operate at an unacceptable LOS F during the PM peak hour under Year 2030 Cumulative without project conditions. Traffic associated with the proposed project would cause the critical delay to increase by more than four seconds and the volume-to-capacity ratio (V/C) to increase by more than 0.01 during the PM peak hour. This constitutes an adverse effect on intersection operations based on the City of Morgan Hill's level of service standards.

The addition of an exclusive southbound right-turn lane on Condit Road would be necessary to improve intersection operations. The addition of the right-turn lane will require signal modifications and lane striping on the southbound approach. Implementation of this improvement would improve the intersection's level of service to LOS D during the PM peak hour under Year 2030 Cumulative with project conditions. This intersection is under the jurisdiction of both the City of Morgan Hill and Santa Clara County. Therefore, implementation of the recommended improvements will require City and County approval.

10. Condit Road and Diana Avenue

This intersection is projected to operate at an unacceptable LOS E during the AM peak hour under Year 2030 Cumulative without and with project conditions. Additionally, the peak-hour traffic signal warrant checks indicate that the intersection would have traffic volumes that meet thresholds that warrant signalization during the AM peak hour under Year 2030 Cumulative without and with project conditions. This constitutes an adverse effect on intersection operations based on the City of Morgan Hill's level of service standards.

The signalization of the intersection would be necessary to improve intersection operations. Implementation of this improvement would improve the intersection's level of service to LOS B during the AM peak hour under Year 2030 Cumulative with project conditions.

Freeway Segment Evaluation

The City is still required to conform to the requirements of the Valley Transit Authority (VTA) which establishes a uniform program for evaluating the transportation impacts of land use decisions on the designated CMP Roadway System. The VTA's Congestion Management Program (CMP) has yet to

adopt and implement guidelines and standards for the evaluation of the CMP roadway system using VMT. Therefore, the effects of the proposed project on freeway segments in the vicinity of the project area following the current methodologies, as outlined in the *VTA Transportation Impact Analysis Guidelines*, were completed. However, this analysis is presented for informational purposes only. The following seven freeway segments were evaluated:

Study Freeway Segments

1. US 101 between SR-85 and Bailey Avenue
2. US 101 between Bailey Avenue and Coyote Creek Golf Drive
3. US 101 between Coyote Creek Golf Drive and Cochrane Road
4. US 101 between Cochrane Road and Dunne Avenue
5. US 101 between Dunne Avenue and Tennant Avenue
6. US 101 between Tennant Avenue and San Martin Avenue
7. US 101 between San Martin Avenue and Masten Avenue

Freeway Segment Level of Service Methodology

As prescribed in the CMP technical guidelines, the level of service for freeway segments is estimated based on vehicle density. Density is calculated by the following formula:

D = V / S
Where:
D= density, in vehicles per mile per lane (vpmpl)
V= peak hour volume, in vehicles per hour per lane (vphpl)
S= average travel speed, in miles per hour (mph)

The vehicle density on a segment is correlated to the level of service as shown in Table 7. The CMP specifies that a capacity of 2,300 vehicles per hour per lane (vphpl) be used for mixed-flow lane segments that are three lanes or wider in one direction, and a capacity of 2,200 vphpl be used for mixed-flow lane segments that are two lanes wide in one direction. A capacity of 1,650 vphpl was used for high occupancy vehicle (HOV) lanes. The CMP defines an acceptable level of service for freeway segments as LOS E or better.

Conformance to CMP Freeway Segment Standards

Based on CMP criteria, a project would fail to meet the CMP freeway segment standard if the additional project traffic caused one of the following during either peak hour:

1. The level of service on the freeway segment is an unacceptable LOS F under existing conditions, and the number of project trips on that segment constitutes at least one percent of capacity on that segment.
2. The level of service on the freeway segment degrades from an acceptable LOS E or better under existing conditions to an unacceptable LOS F under existing plus project conditions.

A significant adverse effect by CMP standards is said to be satisfactorily addressed when measures are implemented that would restore freeway conditions to existing conditions or better.

Table 7
Freeway Level of Service Definitions Based on Density

Level of Service	Description	Density (vehicles/mile/lane)
A	Average operating speeds at the free-flow speed generally prevail. Vehicles are almost completely unimpeded in their ability to maneuver within the traffic stream.	0-11
B	Speeds at the free-flow speed are generally maintained. The ability to maneuver within the traffic stream is only slightly restricted, and the general level of physical and psychological comfort provided to drivers is still high.	>11-18
C	Speeds at or near the free-flow speed of the freeway prevail. Freedom to maneuver within the traffic stream is noticeably restricted, and lane changes require more vigilance on the part of the driver.	>18-26
D	Speeds begin to decline slightly with increased flows at this level. Freedom to maneuver within the traffic stream is more noticeably limited, and the driver experiences reduced physical and psychological comfort levels.	>26-46
E	At this level, the freeway operates at or near capacity. Operations in this level are volatile, because there are virtually no usable gaps in the traffic stream, leaving little room to maneuver within the traffic stream.	>46-58
F	Vehicular flow breakdowns occur. Large queues form behind breakdown points.	>58

Freeway Segment Analysis

The results of the CMP freeway level of service analysis under existing plus project conditions are summarized in Table 8. Traffic volumes on the study freeway segments under existing plus project conditions were estimated by adding project trips to the existing volumes obtained from the 2018 CMP Monitoring and Conformance Report.

The results show that ten directional mixed-flow lanes and one directional HOV lane on the freeway segments analyzed are projected to operate at an unacceptable LOS F during at least one peak hour under existing conditions and would continue to operate at LOS F conditions with the addition of traffic due to proposed project. All other freeway segments analyzed operate at LOS E or better conditions during the AM and PM peak hours.

Improvement of freeway segment operations would require freeway widening to construct additional through lanes, thereby increasing freeway capacity. VTA's Valley Transportation Plan (VTP) 2040 identifies freeway express lane projects along US 101 between Cochrane Road and Whipple Avenue. The planned improvements consist of the conversion of the existing HOV lane to an express lane and the construction of a second express lane in each direction on US 101. These improvements would increase the capacity of the freeway and help to address the deficiency in freeway operations. However, it is not feasible for an individual development project to bear responsibility for implementing such extensive transportation system improvements due to constraints in the acquisition and cost of right-of-way.

Table 8
Freeway Segment Levels of Service

#	Freeway	Segment	Dir.	Peak Hour	Existing Plus Project												Project Trips			
					Mixed-Flow Lane						HOV Lane						Mixed-Flow Lane		HOV Lane	
					Speed[1] (mi/h)	# of Lanes	Capacity (pc/hr/ln)	Volume (pc/hr/ln)	Density (pc/hr/ln)	LOS	Speed[1] (mi/h)	Capacity (vph)	Volume (pc/hr/ln)	Density (pc/hr/ln)	LOS	Volume (pc/hr/ln)	% of Capacity	Volume (pc/hr/ln)	% of Capacity

5.
Other Transportation Issues

This chapter presents an analysis of other transportation issues associated with the project site, including:

- Vehicular site access
- On-site circulation
- Intersection operations analysis – vehicle queuing and left-turn pocket storage at intersections
- Potential impacts to bike, pedestrian and transit facilities

Unlike the level of service impact methodology, which is adopted by the City Council, the analyses in this chapter are based on professional judgment in accordance with the standards and methods employed by the traffic engineering community.

Site Access and Circulation

The site plan for the proposed project was reviewed performed to determine if adequate site access is provided and to identify any access and circulation issues that should be improved. This review was completed in accordance with generally accepted traffic engineering standards.

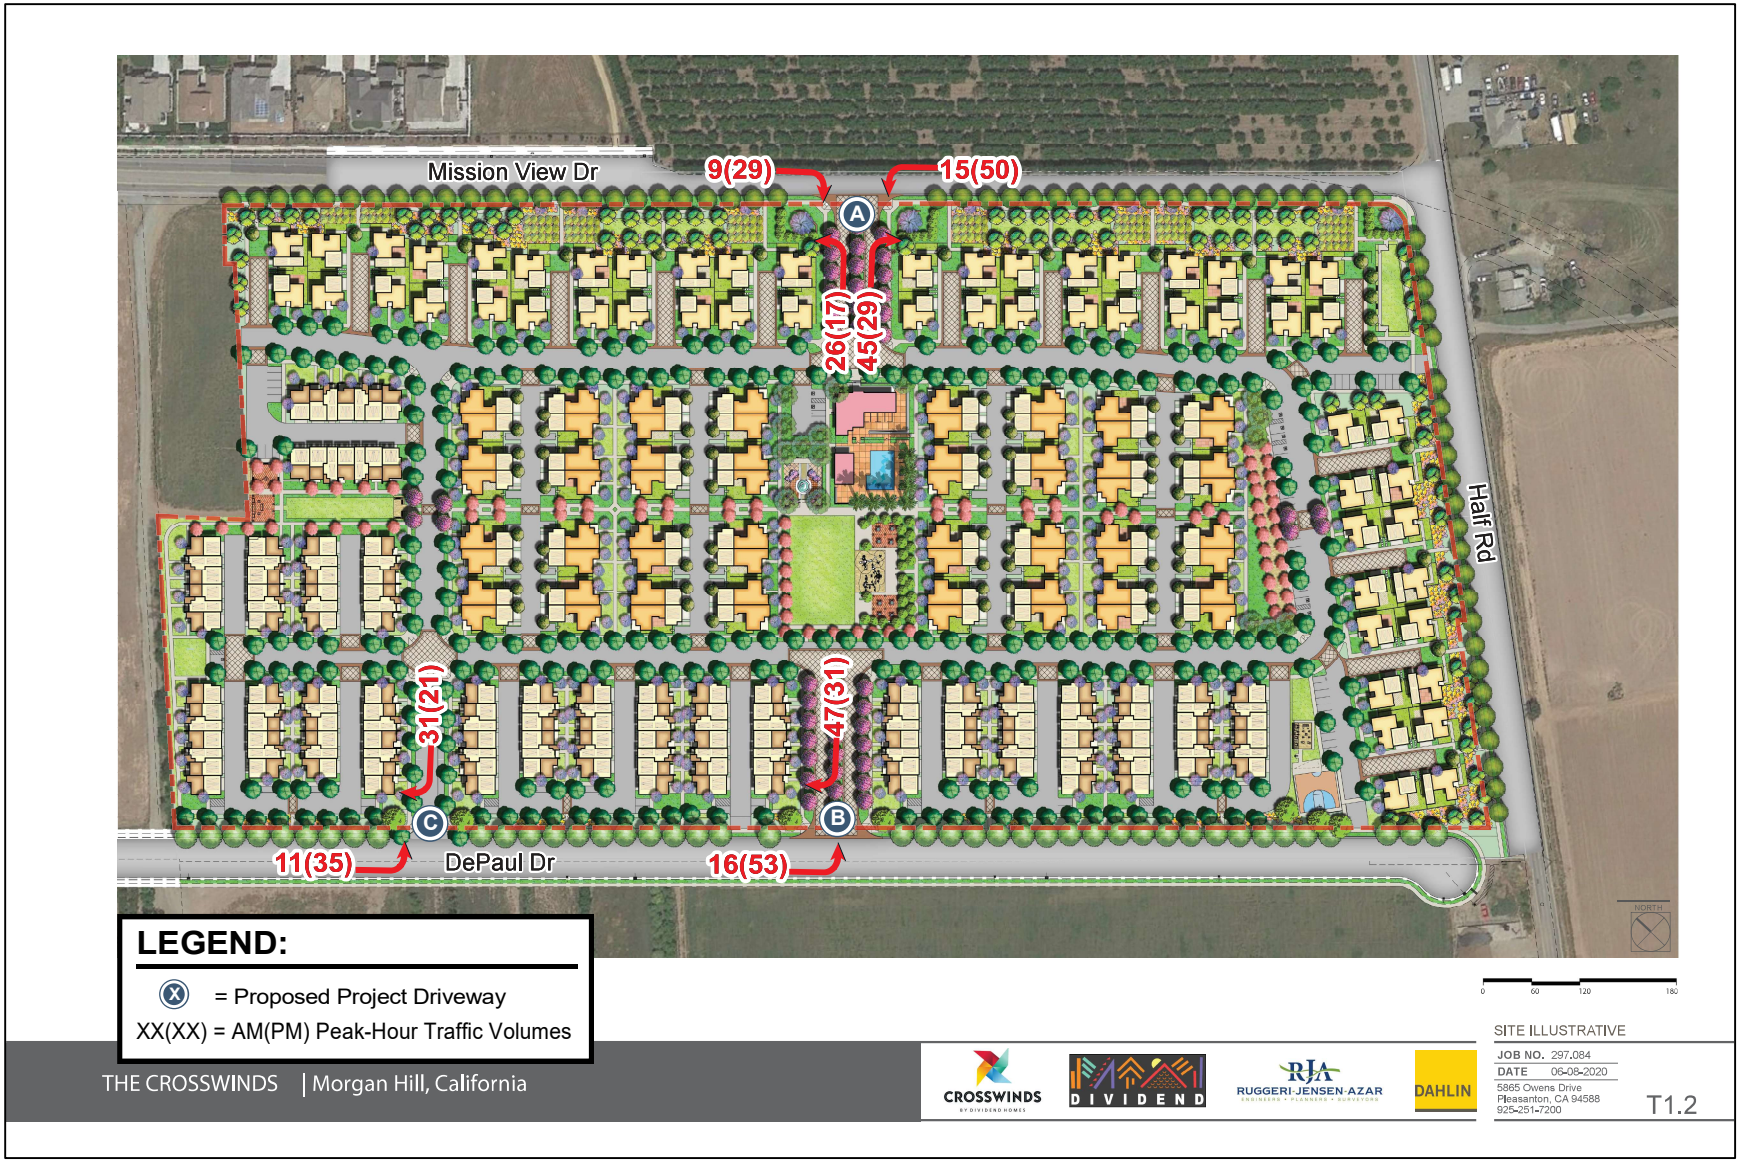
Site Access

Project trips at each of the site access points are presented in Figure 13. The project would include the extension of DePaul Drive to the south with termination as a cul-de-sac just north of Half Road. Access to the project site would be provided via a full access driveway along Mission View Drive and two full access driveways along the DePaul Drive extension.

On-Site Circulation

An internal private street network would provide access to each of the residential units from the proposed entrances along Mission View Drive and DePaul Drive. Most of the streets that front homes include on-street parallel parking. The internal streets would provide continuous access to each area of residential units.

Figure 13
Project Trips at Site Access Points



Travel way on street is typically a minimum of 26 feet. The travel way on the internal streets is shown to be at least 20 feet wide. The narrower travel width will provide adequate width for two-way travel on each of the streets and will promote reduced travel speeds within the site. However, the straight nature of the internal roadways could result in drivers traveling at greater speeds than recommended. Therefore, it may be desirable to implement speed-reducing measures along the internal roadways. These measures could include the installation of speed bumps/humps along the internal roadways and/or bulb-outs at intersections and mid-block.

The project site plan shows sidewalks along the project's frontages along Mission View Drive and DePaul Drive and the internal street network on-site. However, there are no sidewalks provided along the west side of Mission View Drive between the project site and Cochrane Road. In conjunction with the existing sidewalks along the east side of Mission View Drive, the proposed sidewalks on Mission View Drive along the project frontage would provide a connection between the project site and bus stops along Mission View Drive and pedestrian destinations along Cochrane Road. There also are no sidewalks along either side of DePaul Drive between the project site and Cochrane Road. Therefore, there will be no sidewalk connection between the project site and Cochrane Road.

The project site should be designed following City of Morgan Hill design standards and provide adequate width and turn-radii at and along all drive/parking aisles to allow for two-way circulation and adequate circulation of larger vehicles (such as emergency trucks, garbage truck, and delivery trucks) throughout the project site. Adhering to the City of Morgan Hill standards and requirements, and implementing the above recommendations, the proposed site access points and layout of the surface parking areas would be adequate to accommodate the circulation of both passenger and emergency vehicles.

Emergency Vehicle Access and Circulation

The 20-foot-wide internal roadway would provide emergency vehicles (fire trucks) sufficient space to access each of the residential units on-site. There are several dead-end drive aisles that would not provide sufficient space for emergency vehicles to turn around. However, the dead-ends will be located along short segments of roadways. Thus, vehicles would be able to back out of the roadways.

Project Driveway Operations

Based on the project trip generation and trip assignment, it is estimated that a maximum of 79 and 88 inbound trips (during the PM peak hour) and 71 and 78 outbound trips (during the AM peak hour) would enter and exit the site at the Mission View Drive driveway and the two driveways on DePaul Drive combined, respectively. As proposed, each of the three project driveways would be provided with one outbound lane and one inbound lane to serve the shared through/right-turn lane and through/left-turn lane into the site on Mission View Drive and DePaul Drive. The estimated project trips at the project site driveways are shown in Figure 13. The results of the driveway operations analyses are summarized in Table 9. The calculations for the project driveway operations analyses are included in Appendix G.

The results of the level of service analysis indicate that all three project driveways are projected to operate at acceptable levels of service (LOS D or better) during each of the peak hours analyzed.

The results of the signal warrant analysis indicate all three project driveways are projected to have traffic conditions that fall below the thresholds that warrant signalization.

The results of the queuing analysis indicate the 95th percentile queues at the project driveways are projected to be at most 25 feet.

Table 9
Project Driveway Operations

Intersection	Int. Control	LOS Std	Peak Hour	Existing Plus Project							Year 2030 Cumulative with Project						
				Warrant Met?	Delay[1]	LOS	Queue Length (ft.) NBL	EB	SBL	WB	Warrant Met?	Delay[1]	LOS	Queue Length (ft.) NBL	EB	SBL	WB
Mission View Drive and Project Driveway A	OWSC	D	AM	No	11.6	B	0	25	--	--	No	19.7	C	0	25	--	--
			PM	No	14.2	B	25	25	--	--	No	31.1	D	25	25	--	--
DePaul Drive and Project Driveway B	OWSC	D	AM	No	8.4	A	--	--	0	25	No	8.4	A	--	--	0	25
			PM	No	8.4	A	--	--	25	25	No	8.4	A	--	--	25	25
DePaul Drive and Project Driveway C	OWSC	D	AM	No	8.6	A	--	--	0	25	No	8.6	A	--	--	0	25
			PM	No	8.5	A	--	--	25	0	No	8.5	A	--	--	25	0

Notes:
[1]The reported delay and corresponding level of service for one-way stop-controlled intersections are based on the stop-controlled approach with the highest delay.
OWSC = one-way stop-controlled; NBL = northbound left; EB = eastbound; SBL = southbound left; WB = westbound

Recommendation: A center-striped median is currently provided along Mission View Drive north of the project site. The current width of Mission View Drive along the project frontage is not adequate to provide a left-turn pocket into the project driveway. Mission View Drive would need to be widened along its east side, opposite the project frontage, to provide a striped left-turn pocket into the project site. Similarly, left-turn lanes should be striped at the project driveways along DePaul Drive if a center-striped median is planned.

Intersection Operations Analysis

The analysis of the intersection level of service was supplemented with an analysis of intersection operations for selected intersections where the project would add a significant number of left-turning vehicles. The operations analysis is based on vehicle queuing for high demand left-turn movements at intersections. Vehicle queues were estimated using a Poisson probability distribution, which estimates the probability of "n" vehicles for a vehicle movement using the following formula:

$$P(x=n) = \frac{\lambda^n e^{-(\lambda)}}{n!}$$

Where:
P (x=n) = probability of "n" vehicles in queue per lane
n = number of vehicles in the queue per lane
λ = average number of vehicles in the queue per lane (vehicles per hour per lane/signal cycles per hour)

The basis of the analysis is as follows: (1) the Poisson probability distribution is used to estimate the 95th percentile number of queued vehicles per cycle for a particular movement; (2) the estimated maximum number of vehicles in the queue is translated into a queue length, assuming 25 feet per vehicle; and (3) the estimated 95th percentile queue length is compared to the existing or planned available storage capacity for the movement. This analysis thus provides a basis for estimating future left-turn storage requirements at intersections. The 95th percentile queue length value indicates that during the peak hour, a queue of this length or less would occur on 95 percent of the signal cycles. Likewise, a queue length larger than the 95th percentile queue would only occur on 5 percent of the signal cycles (about 3 cycles during the peak hour for a signal with a 60-second cycle length). Therefore, left-turn storage pocket designs based on the 95th percentile queue length would ensure that storage space would be exceeded only 5 percent of the time. The 95th percentile queue length is also known as the "design queue length".

The vehicle queue estimates and a tabulated summary of the findings are provided in Table 10. The vehicular queuing analysis (Poisson probability calculations) is included in Appendix F.

Cochrane Road and Mission View Drive

The queuing analysis indicates that the estimated 95th vehicle queue for northbound left-turn movement at the Cochrane Road and Mission View Drive intersection currently exceeds the provided turn pocket storage space during the AM and PM peak hours under existing conditions.

The northbound left-turn pocket currently provides approximately 100 feet of vehicle storage, which can accommodate approximately 4 vehicles. The estimated 95th percentile vehicle queues for the northbound left-turn movement currently are approximately 14 and 6 vehicles during the AM and PM peak hours under existing conditions, respectively.

Table 10
Vehicle Queuing Analysis

Adequate (Y/N)	YES	YES	**NO**	**NO**	YES	YES	YES	YES

Notes:
[1] Cycle length for signalized intersections and control delay for stop-controlled intersections.
[2] Assumes 25 feet per vehicle queued

The addition of project traffic is not projected to lengthen the projected queue during the AM peak hour. However, the addition of project traffic is projected to lengthen the projected queue by one vehicle or 25 feet during the PM peak hour under existing plus project conditions, which would exceed the existing storage capacity by 75 feet.

Recommendation: The northbound left-turn pocket can be lengthened by 250 feet to accommodate the projected queue during the AM peak hour. However, a second northbound left-turn lane is recommended to improve intersection operations.

Project-generated traffic at other locations would be too low to have a measurable effect on queue lengths.

Sight Distance

Adequate sight distance (sight distance triangles) should be provided at the project site driveways in accordance with the *Caltrans Highway Design Manual*. Sight distance triangles should be measured at the driveway approximately 10 feet back from the traveled way. Providing the appropriate sight distance reduces the likelihood of a collision at a driveway or intersection and provides drivers with the ability to exit a driveway and locate sufficient gaps in traffic. The minimum acceptable sight distance is often considered the Caltrans stopping sight distance. Sight distance requirements vary depending on the roadway speeds. DePaul Drive and Mission View Drive have posted speed limits of 35 and 40 mph, respectively. The Caltrans stopping sight distance for facilities with posted speed limits of 35 and 40 mph are 250 and 300 feet, respectively. Thus, a driver exiting the project driveways on DePaul Drive and Mission View Drive must be able to see approaching traffic on DePaul Drive and Mission View Drive at minimum distances of 250 and 300 feet, respectively, to be able to stop and avoid a collision.

Based on field observations, aerial images, and the location of the project driveways, there are no existing trees or visual obstructions along DePaul Drive and Mission View Drive that would obscure sight distance to drivers exiting the project site, providing a clear view of approaching traffic on both sides of DePaul Drive and Mission View Drive beyond the minimum required distances of 250 and 300 feet, respectively. Therefore, it can be concluded that the project access driveways would meet the Caltrans minimum stopping sight distance standards.

Recommendation: The site design should ensure design features, in particular, the landscaping and signage along the project site frontage and at the project site driveways, would not interfere with the sight distance at the proposed site driveway.

Parking

Based on Tables 18.72-2 and 18.72-3 of Section 18.72.030 of the Morgan Hill City Code, the project would be required to provide 2 covered parking spaces per residential unit and one guest parking space is required for every four residential units. The project would be required to provide 538 resident and 68 guest parking spaces for the proposed 269 residential units. The project is proposing to provide two covered parking spaces for each residential unit for a total of 538 parking spaces and 271 on-street parking spaces within the internal street network. Therefore, the provided number of parking spaces would satisfy the City's parking requirement.

Transit, Pedestrian, and Bicycle Analysis

The project site is served by Local Route 87 with bus stops along Mission View Drive and Half Road. In addition, Express Route 168 also provides service along Cochrane Road west of US 101. These two bus routes provide a connection to the Morgan Hill Caltrain Station. A conservative mode split in Morgan Hill would be a three percent transit share. Assuming up to three percent transit mode share for the project equates to no more than six and eight transit riders during the AM and PM peak hours, respectively.

VTA has recommended that a new bus stop for Route 87 be installed along Mission View Drive on the project frontage just south of the project entrance. VTA also has suggested a new bus stop be installed on the northbound side of Mission View Drive if a controlled crosswalk were to be installed at the project entrance along Mission view Drive. However, this analysis showed no need for signal control at the project entrance. It is recommended that the project coordinate with VTA to identify the specific placement of a new bus stop along Mission View Drive and allow for adequate space along its frontage on Mission View to accommodate the installation of a bus stop including wider sidewalks, lighting, landscaping, and passenger pad.

Sidewalks are provided along the east side of Mission View Drive and the north side of Cochrane Road in the immediate project area. However, sidewalks along the south side of Cochrane Road are intermittent, with no sidewalk currently provided between the US 101 northbound ramps and De Paul Drive, and a short segment west of Mission View Drive. The project would provide sidewalks along its entire frontages along Mission View Drive, Half Road, and DePaul Drive and result in a continuous connection to the existing sidewalks on the east side of Mission View Drive to provide a safe connection between the project site and other surrounding land uses in the area. Controlled crossings at the intersections of Cochrane Road with Mission View Drive and DePaul Drive would provide a connection between the project area and retail uses on the north side of Cochrane Road.

Bike lanes are currently provided along the entire lengths of Cochrane Road and Main Avenue. An unpaved bike path, the Madrone Channel Trail, runs along the east side of US 101, between Tennant Avenue and Cochrane Road. It is expected that bicycle trips would comprise no more than one percent of the total project-generated trips. Thus, the project could potentially generate no more than three new bicycle trips during each of the peak hours. The demand generated by the proposed project could be accommodated by the existing bicycle facilities in the vicinity of the project site.

Freeway Ramp Analysis

Freeway On-Ramp Queuing Analysis

An analysis of metered freeway ramps providing access to the project site was performed to identify the effect of the addition of project traffic on the queues at metered study freeway on-ramps. It should be noted that the evaluation of freeway ramps is not required based on the City's transportation analysis guidelines. Nor are there adopted methodologies and impact criteria for the analysis of freeway ramps. The project is expected to add peak hour trips to only the following metered freeway on-ramps in the project vicinity:

- US 101 northbound on-ramp from westbound Cochrane Road (Active Meter – AM Peak Hour)
- US 101 southbound on-ramp from westbound Cochrane Road (Active Meter – PM Peak Hour)
- US 101 southbound on-ramp from Dunne Avenue

The project is projected to add at most four trips to the US 101 southbound on-ramp from Dunne Avenue during the AM or PM peak hour and would not lengthen the projected queues at this location. Therefore, this ramp was not included in the queuing analysis.

The analysis indicates that project traffic would not lengthen the projected 15-minute interval queue lengths at either of the subject Cochrane Road on-ramps under existing plus project conditions. Short vehicle queues, less than 10 vehicles, currently occur at the ramps, however, the queues dissipate during the 15-minute intervals because the demand volume is less than the service rate of the freeway ramp meters.

The volumes on the northbound diagonal on-ramp from westbound Cochrane Road are projected to be greater than the service rate of the ramp meter during the AM peak hour under Year 2030 Cumulative with project conditions. Therefore, queues are projected to develop on the northbound diagonal on-ramp. Trips from the proposed project will result in an increase in the projected queue by two vehicles. However, the projected queues on the metered northbound diagonal on-ramp can be accommodated entirely on the ramp. The freeway on-ramp queuing calculations are included in Appendix H.

Freeway Off-Ramp Queuing Analysis

A queuing analysis was completed for freeway off-ramps, where the project will result in the addition of peak hour trips. These freeway off-ramps are controlled by a traffic signal at their intersection with the local arterial. The project is expected to add peak hour trips to only the following freeway off-ramps in the project vicinity:

- US 101 northbound off-ramp to Cochrane Road
- US 101 southbound off-ramp to Cochrane Road
- US 101 northbound off-ramp to Dunne Avenue

The project is projected to add at most four trips to the US 101 northbound off-ramp at Dunne Avenue during the AM or PM peak hour and would not lengthen the projected queues at this location. Therefore, this ramp was not included in the queuing analysis.

The results of the analysis (see Table 11) show that the 95th percentile queue lengths at each of the US 101 off-ramps to Cochrane Road are projected to be accommodated entirely on the ramps and would not extend back and disrupt the freeway mainline. The freeway off-ramp queuing calculations are included in Appendix H.

Table 11
Freeway Off-Ramp Vehicle Queuing Analysis

Scenario		Queue Length[1] (feet)			
		US 101 SB Off-Ramps and Cochrane Road		US 101 NB Off-Ramps and Cochrane Road	
		SBL/R[2]	SBR[2]	NBL[2]	NBL/R[2]

Notes:
[1]Queue lengths were obtained from Traffix assuming 25 feet per vehicle.
[2]SBL/R = southbound left/right; SBR = southbound right; NBL = northbound left; NBL/R = northbound left/right

6. Conclusions

The potential impacts of the project were evaluated in accordance with the California Environmental Quality Act (CEQA) guidelines and the Governor's Office of Planning and Research (OPR) *Technical Advisory on Evaluating Transportation Impacts in CEQA*, December 2018.

A supplemental traffic operations analysis also was completed to demonstrate the project's consistency with the *Morgan Hill 2035 General Plan* goals and policies. The traffic operations analysis supplements the CEQA required VMT analysis. However, the determination of project impacts per CEQA requirements is based solely on the VMT analysis.

CEQA VMT Analysis

The results of the VMT analysis using the VTA's VMT Evaluation Tool indicate that the existing VMT for residential uses in the project vicinity is 30.46 VMT per capita.

The results also indicate that the project is projected to generate VMT per capita (27.41), which would exceed the OPR's recommended impact threshold of 20.94 VMT per capita. Therefore, the project would result in an impact on the transportation system based on OPR's VMT impact criteria.

VMT Impacts and Mitigation

Using OPR's impact thresholds, the project would need to implement VMT reduction measures to achieve a 24% reduction (27.41 to 20.94) in its VMT per capita for the proposed residential uses to reduce its impact to less than significant levels.

OPR's recommended 15% below existing VMT impact threshold encourages developments in transit-rich, highly mixed-use areas to implement design features and trip reduction measures to take advantage of existing multi-model infrastructure and land use mixes in reducing trip making and/or trip lengths. However, many communities such as Morgan Hill have very limited multi-modal transportation infrastructure and lack a mix of complementary land uses. The lack of employment in these communities along with minimal transit options results in a greater number and longer commute trips. Therefore, it is highly unlikely that developments like the proposed project in these cities can achieve OPR's recommended 15% reduction in VMT. Therefore, absent of the City adopting its own City-

specific VMT policies and impact thresholds, the proposed project's VMT impact must be deemed significant and unavoidable.

Per its condition of approval, the City will however require that the project implement and/or incorporate in its design the following VMT reduction measures to encourage the use of multi-modal travel and reduce the number and length of vehicular trips:

1. The management entity/HOA shall provide fully (100 percent) subsidized annual VTA transit passes for all project homeowners (a maximum of one transit subsidy per residential unit, which would result in up to 269 transit passes per year). This subsidized transit program shall be approved by the City of Morgan Hill's Public Services Director prior to issuance of occupancy.

2. The project must improve the surrounding pedestrian network by including sidewalks which terminate at the common property line, allowing for connections to the adjacent property in the event there is development in the future. Continuous sidewalks are proposed along the project frontages. The proposed frontage improvements along Mission View Drive, Half Road, and De Paul Drive include sidewalk improvements; each of the street sections will be wide enough to accommodate future bicycle lanes.

3. The proposed development will include 64 bicycle parking spaces.

Traffic Operations Analysis

Project Trip Generation

Based on the recommended rates for single-family detached housing (Land Use #210) and the size of the proposed project, it is estimated that the proposed project would generate 2,539 daily trips, with 199 trips (50 inbound and 149 outbound) occurring during the AM peak hour and 266 trips (168 inbound and 98 outbound) occurring during the PM peak hour.

Intersection Operations Analyses

The results of the traffic operations analysis indicate that based on the City's operating standards, the proposed project would have an adverse effect on intersection operations at the following four study intersections under Year 2030 Cumulative with project conditions.

6. Mission View Drive and Cochrane Road (AM & PM Peak Hours)
8. Mission View Drive and Half Road (unsignalized) (AM & PM Peak Hours)
9. Condit Road and Main Avenue (PM Peak Hour)
10. Condit Road and Diana Avenue (unsignalized) (AM Peak Hour)

Adverse Intersection Operations Effects and Potential Improvements

The adverse intersection operation effects identified under Year 2030 Cumulative with project conditions are discussed below. Included are descriptions of the adverse effects on intersection operations and potential improvement measures that may be included as part of the project's Conditions of Approval. However, the identified roadway operations and improvements are not required or considered project impacts per CEQA guidelines.

6. Cochrane Road and Mission View Drive

This intersection is projected to operate at an unacceptable LOS F and E during the AM and PM peak hours, respectively, under Year 2030 Cumulative without project conditions. Traffic associated with the proposed project would cause the critical delay to increase by more than four seconds and the volume-to-capacity ratio (V/C) to increase by more than 0.01 during both the AM and PM peak hours. This constitutes an adverse effect on intersection operations based on the City of Morgan Hill's level of service standards.

The addition of a second northbound left-turn lane on Mission View Drive and a cycle length adjustment would be necessary to improve intersection operations. The addition of the second northbound left-turn lane will require lane striping and signal modification but will fit within the existing curb-to-curb pavement width on Mission View Drive. Implementation of this improvement would improve the intersection's level of service to LOS C during both the AM and PM peak hours under Year 2030 Cumulative with project conditions.

8. Mission View Drive and Half Road

This intersection is projected to operate at an unacceptable LOS F during the PM peak hour under Year 2030 Cumulative without and with project conditions. Furthermore, this intersection is projected to operate at an acceptable LOS D during the AM peak hour under Year 2030 Cumulative without conditions and degrade to LOS E with the addition of project traffic. Additionally, the peak-hour traffic signal warrant checks indicate that the intersection would have traffic volumes that meet thresholds that warrant signalization during both the AM and PM peak hours under Year 2030 Cumulative without and with project conditions. This constitutes an adverse effect on intersection operations based on the City of Morgan Hill's level of service standards.

The signalization of the intersection would be necessary to improve intersection operations. Implementation of a traffic signal at this location would improve the level of service to LOS C during both the AM and PM peak hours under Year 2030 Cumulative with project. This intersection is under the jurisdiction of both the City of Morgan Hill and Santa Clara County. Therefore, implementation of the recommended improvements will require City and County approval.

9. Main Avenue and Condit Road

This intersection is projected to operate at an unacceptable LOS F during the PM peak hour under Year 2030 Cumulative without project conditions. Traffic associated with the proposed project would cause the critical delay to increase by more than four seconds and the volume-to-capacity ratio (V/C) to increase by more than 0.01 during the PM peak hour. This constitutes an adverse effect on intersection operations based on the City of Morgan Hill's level of service standards.

The addition of an exclusive southbound right-turn lane on Condit Road would be necessary to improve intersection operations. The addition of the right-turn lane will require signal modifications and lane striping on the southbound approach. Implementation of this improvement would improve the intersection's level of service to LOS D during the PM peak hour under Year 2030 Cumulative with project conditions. This intersection is under the jurisdiction of both the City of Morgan Hill and Santa Clara County. Therefore, implementation of the recommended improvements will require City and County approval.

10. Condit Road and Diana Avenue

This intersection is projected to operate at an unacceptable LOS E during the AM peak hour under Year 2030 Cumulative without and with project conditions. Additionally, the peak-hour traffic signal

warrant checks indicate that the intersection would have traffic volumes that meet thresholds that warrant signalization during the AM peak hour under Year 2030 Cumulative without and with project conditions. This constitutes an adverse effect on intersection operations based on the City of Morgan Hill's level of service standards.

The signalization of the intersection would be necessary to improve intersection operations. Implementation of this improvement would improve the intersection's level of service to LOS B during the AM peak hour under Year 2030 Cumulative with project conditions.

Freeway Segment Level of Service Analysis

The results of the freeway segment level of service analysis indicate that ten directional mixed-flow lanes and one directional HOV lane on the freeway segments analyzed are projected to operate at an unacceptable LOS F during at least one peak hour under existing conditions and would continue to operate at LOS F conditions with the addition of traffic due to proposed project.

Improvement of freeway segment operations would require freeway widening to construct additional through lanes, thereby increasing freeway capacity. VTA's Valley Transportation Plan (VTP) 2040 identifies freeway express lane projects along US 101 between Cochrane Road and Whipple Avenue. The planned improvements consist of the conversion of the existing HOV lane to an express lane and the construction of a second express lane in each direction on US 101. These improvements would increase the capacity of the freeway and help to address the deficiency in freeway operations. However, it is not feasible for an individual development project to bear responsibility for implementing such extensive transportation system improvements due to constraints in the acquisition and cost of right-of-way.

Other Transportation Issues

Site Access

The project would include the extension of DePaul Drive to the south with termination as a cul-de-sac just north of Half Road. Access to the project site would be provided via a full access driveway along Mission View Drive and two full access driveways along the DePaul Drive extension.

On-Site Circulation

An internal private street network would provide access to each of the residential units from the proposed entrances along Mission View Drive and DePaul Drive. Most of the streets that front homes include on-street parallel parking. The internal streets would provide continuous access to each area of residential units.

Travel way on street is typically a minimum of 26 feet. The travel way on the internal streets is shown to be at least 20 feet wide. The narrower travel width will provide adequate width for two-way travel on each of the streets and will promote reduced travel speeds within the site. However, the straight nature of the internal roadways could result in drivers traveling at greater speeds than recommended. Therefore, it may be desirable to implement speed-reducing measures along the internal roadways. These measures could include the installation of speed bumps/humps along the internal roadways and/or bulb-outs at intersections and mid-block.

The project site plan shows sidewalks along the project's frontages along Mission View Drive and DePaul Drive and the internal street network on-site. However, there are no sidewalks provided along

the west side of Mission View Drive between the project site and Cochrane Road. In conjunction with the existing sidewalks along the east side of Mission View Drive, the proposed sidewalks on Mission View Drive along the project frontage would provide a connection between the project site and bus stops along Mission View Drive and pedestrian destinations along Cochrane Road. There also are no sidewalks along either side of DePaul Drive between the project site and Cochrane Road. Therefore, there will be no sidewalk connection between the project site and Cochrane Road.

The project site should be designed following City of Morgan Hill design standards and provide adequate width and turn-radii at and along all drive/parking aisles to allow for two-way circulation and adequate circulation of larger vehicles (such as emergency trucks, garbage truck, and delivery trucks) throughout the project site. Adhering to the City of Morgan Hill standards and requirements, and implementing the above recommendations, the proposed site access points and layout of the surface parking areas would be adequate to accommodate the circulation of both passenger and emergency vehicles.

Emergency Vehicle Access and Circulation

The 20-foot-wide internal roadway would provide emergency vehicles (fire trucks) sufficient space to access each of the residential units on-site. There are several dead-end drive aisles that would not provide sufficient space for emergency vehicles to turn around. However, the dead-ends will be located along short segments of roadways. Thus, vehicles would be able to back out of the roadways.

Intersection Operations Analysis

The queuing analysis also indicates that the maximum vehicle queue for northbound left-turn movement at the Cochrane Road and Mission View Drive intersection currently exceeds the provided turn pocket storage space during the AM and PM peak hours under existing conditions.

The addition of project traffic is not projected to lengthen the projected queue during the AM peak hour. However, the addition of project traffic is projected to lengthen the projected queue by one vehicle or 25 feet during the PM peak hour under existing plus project conditions, which would exceed the existing storage capacity by 75 feet.

Recommendation: The northbound left-turn pocket can be lengthened by 250 feet to accommodate the projected queue during the AM peak hour. However, a second northbound left-turn lane is recommended to improve intersection operations.

Project Driveway Operations

The results of the project driveway operations analysis indicate that all three project driveways are projected to operate at acceptable levels of service (LOS D or better) during each of the peak hours analyzed and to have traffic conditions that fall below the thresholds that warrant signalization. Additionally, the 95th percentile queues at the project driveways are projected to be at most 25 feet.

Recommendation: A center-striped median is currently provided along Mission View Drive north of the project site. The current width of Mission View Drive along the project frontage is not adequate to provide a left-turn pocket into the project driveway. Mission View Drive would need to be widened along its east side, opposite the project frontage, to provide a striped left-turn pocket into the project site. Similarly, left-turn lanes should be striped at the project driveways along DePaul Drive if a center-striped median is planned.

Sight Distance

Based on Caltrans requirements, the available sight distance at the project site driveways on DePaul Drive and Mission View Drive would be adequate.

Recommendation: The site design should ensure design features, in particular, the landscaping and signage along the project site frontage and at the project site driveways, would not interfere with the sight distance at the proposed site driveway.

Parking

Based on Tables 18.72-2 and 18.72-3 of Section 18.72.030 of the Morgan Hill City Code, the project would be required to provide 2 covered parking spaces per residential unit and one guest parking space is required for every four residential units. The project would be required to provide 538 resident and 68 guest parking spaces for the proposed 269 residential units. The project is proposing to provide two covered parking spaces for each residential unit for a total of 538 parking spaces and 271 on-street parking spaces within the internal street network. Therefore, the provided number of parking spaces would satisfy the City's parking requirement.

Transit, Pedestrian, and Bicycle Analysis

The project site is served by Local Route 87 with bus stops along Mission View Drive and Half Road. In addition, Express Route 168 also provides service along Cochrane Road west of US 101. These two bus routes provide a connection to the Morgan Hill Caltrain Station. A conservative mode split in Morgan Hill would be a three percent transit share. Assuming up to three percent transit mode share for the project equates to no more than six and eight transit riders during the AM and PM peak hours, respectively.

VTA has recommended that a new bus stop for Route 87 be installed along Mission View Drive on the project frontage just south of the project entrance. VTA also has suggested a new bus stop be installed on the northbound side of Mission View Drive if a controlled crosswalk were to be installed at the project entrance along Mission view Drive. However, this analysis showed no need for signal control at the project entrance. It is recommended that the project coordinate with VTA to identify the specific placement of a new bus stop along Mission View Drive and allow for adequate space along its frontage on Mission View to accommodate the installation of a bus stop including wider sidewalks, lighting, landscaping, and passenger pad.

Sidewalks are provided along the east side of Mission View Drive and the north side of Cochrane Road in the immediate project area. However, sidewalks along the south side of Cochrane Road are intermittent, with no sidewalk currently provided between the US 101 northbound ramps and De Paul Drive, and a short segment west of Mission View Drive. The project would provide sidewalks along its entire frontages along Mission View Drive, Half Road, and DePaul Drive and result in a continuous connection to the existing sidewalks on the east side of Mission View Drive to provide a safe connection between the project site and other surrounding land uses in the area. Controlled crossings at the intersections of Cochrane Road with Mission View Drive and DePaul Drive would provide a connection between the project area and retail uses on the north side of Cochrane Road.

Bike lanes are currently provided along the entire lengths of Cochrane Road and Main Avenue. An unpaved bike path, the Madrone Channel Trail, runs along the east side of US 101, between Tennant Avenue and Cochrane Road. It is expected that bicycle trips would comprise no more than one percent of the total project-generated trips. Thus, the project could potentially generate no more than three new

bicycle trips during each of the peak hours. The demand generated by the proposed project could be accommodated by the existing bicycle facilities in the vicinity of the project site.

Freeway Ramp Analysis

Freeway On-Ramp Queuing Analysis

The analysis indicates that project traffic would not lengthen the projected 15-minute interval queue lengths at either of the subject Cochrane Road on-ramps under existing plus project conditions. Short vehicle queues, less than 10 vehicles, currently occur at the ramps, however, the queues dissipate during the 15-minute intervals because the demand volume is less than the service rate of the freeway ramp meters.

The volumes on the northbound diagonal on-ramp from westbound Cochrane Road are projected to be greater than the service rate of the ramp meter during the AM peak hour under Year 2030 Cumulative with project conditions. Therefore, queues are projected to develop on the northbound diagonal on-ramp. Trips from the proposed project will result in an increase in the projected queue by two vehicles. However, the projected queues on the metered northbound diagonal on-ramp can be accommodated entirely on the ramp.

Freeway Off-Ramp Queuing Analysis

The results of the analysis show that the 95th percentile queue lengths at each of the US 101 off-ramps to Cochrane Road are projected to be accommodated entirely on the ramps and would not extend back and disrupt the freeway mainline.

Signal Warrant Analysis

The Crosswinds Residential Development

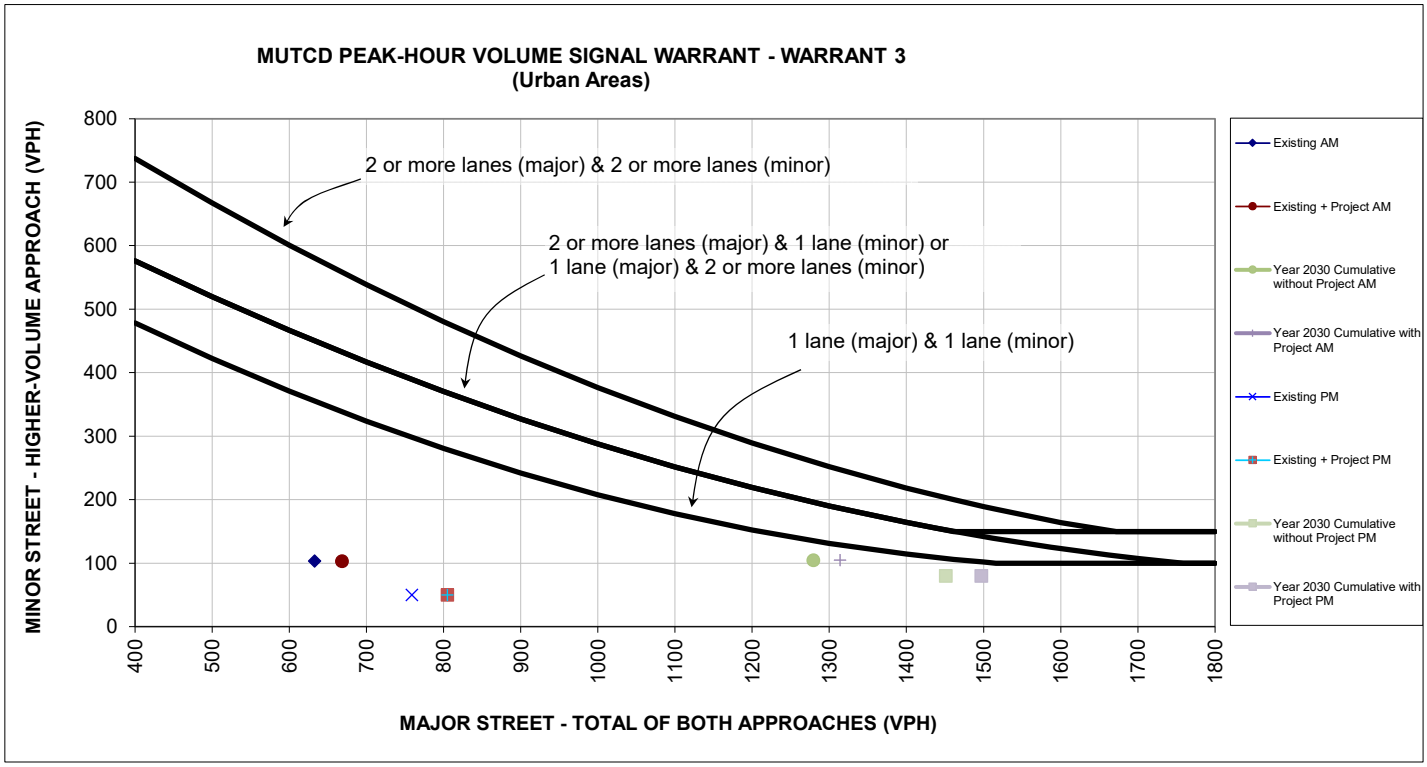
7 . Mission View Drive and Avenida De Los Padres



Source: Figure 4C-3 of the Manual on Unifrom Traffic Control and Devices (MUTCD) from California Department of Transportation (Caltrans).
* 150 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 100 vph applies as the lower threshold volume for a minor-street approach with one lane.

		Approach Lanes: One	Approach Lanes: 2 or More	Existing AM	Existing + Project AM	Year 2030 Cumulative without Project AM	Year 2030 Cumulative with Project AM
Major Street - Both Approaches	Avenida De Los Padres	X		633	668	1279	1314
Minor Street - Highest Approach	Mission View Drive	X		103	103	105	105
Maximum warrant threshold for minor street volume				355	338	135	128
Difference between warrant threshold & minor street volume				252	235	30	23
		Warrant Met?		No	No	No	No

		Approach Lanes: One	Approach Lanes: 2 or More	Existing PM	Existing + Project PM	Year 2030 Cumulative without Project PM	Year 2030 Cumulative with Project PM
Major Street - Both Approaches	Avenida De Los Padres	X		759	805	1451	1497
Minor Street - Highest Approach	Mission View Drive	X		50	50	80	80
Maximum warrant threshold for minor street volume				298	279	107	102
Difference between warrant threshold & minor street volume				248	229	27	22
		Warrant Met?		No	No	No	No

The Crosswinds Residential Development

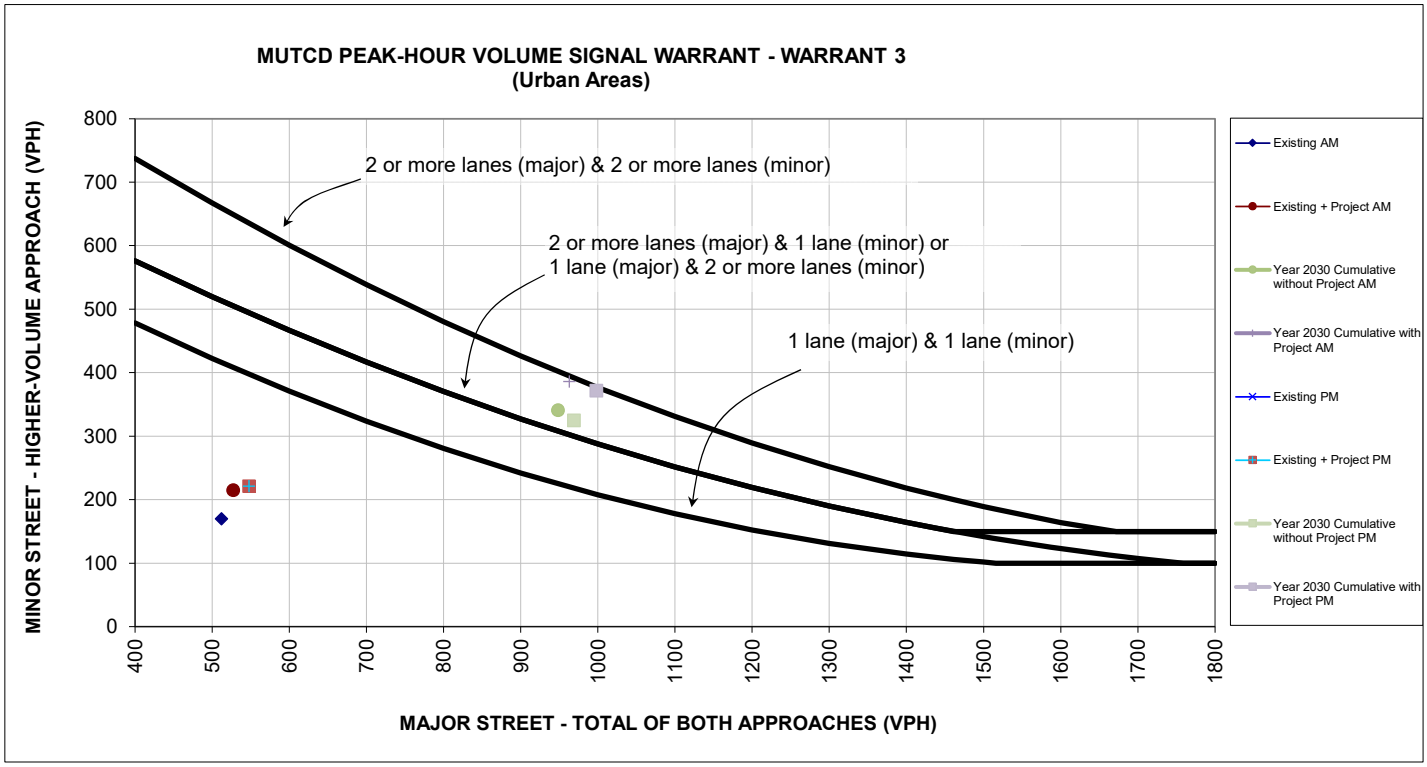
8 . Mission View Drive and Half Road



Source: Figure 4C-3 of the Manual on Unifrom Traffic Control and Devices (MUTCD) from California Department of Transportation (Caltrans).
* 150 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 100 vph applies as the lower threshold volume for a minor-street approach with one lane.

		Approach Lanes: One	Approach Lanes: 2 or More	Existing AM	Existing + Project AM	Year 2030 Cumulative without Project AM	Year 2030 Cumulative with Project AM
Major Street - Both Approaches	Mission View Drive	X		512	527	948	963
Minor Street - Highest Approach	Half Road	X		170	215	341	386
Maximum warrant threshold for minor street volume				416	408	225	220

Appendix H

Water Supply and Demand Evaluation

TODD GROUNDWATER

April 13, 2021

REVISED MEMORANDUM

To: Maria Kisyova and Amber Sharpe, David J. Powers & Associates, Inc.

From: Kate White, PE, Todd Groundwater

Re: The Crosswinds at Morgan Hill
Water Supply and Demand Evaluation, City of Morgan Hill

The City of Morgan Hill has requested David J. Powers to prepare a project-level analysis for a proposed residential development called the Crosswinds at Morgan Hill Project (Project). The Project is located at the intersection of Half Road and Mission View Drive in Morgan Hill and will consist of 269 residential units. David J. Powers has asked Todd Groundwater to provide a water supply and demand evaluation memorandum for the Project.

The California Water Code Section 10910 (also termed Senate Bill 610 or SB610) requires that a Water Supply Assessment (WSA) be prepared for a project that is subject to CEQA and is considered a project subject to SB610 as defined in Water Code Section 10912. The Crosswinds at Morgan Hill is subject to CEQA but is not subject to SB610 according to Water Code Section 10912. Therefore, a WSA is not needed for the Project but WSA-related information is provided in this memorandum to comprehensively document supply and demand conditions.

THE CROSSWINDS AT MORGAN HILL PROJECT DESCRIPTION

The Project is on an approximately 33-acre site in Morgan Hill (**Figure 1**). Its proposed 269 residential units will have the following breakdown:

- 56 single family
- 64 duet units
- 149 condominium units.

The site is bounded by Half Road to the southeast, Mission View Drive to the northeast, and DePaul Drive to the southwest (**Figure 2**). There will be a total of 40 below-market-rate units. The single-family detached residences would be constructed on the eastern and southern perimeters of the Project site, along Mission View Drive and Half Road. The attached duets would be constructed in the center of the Project site and three-story condominiums would be constructed along the western and northwestern perimeters of the site, along DePaul Drive and adjacent to a vacant parcel. A recreation center with a pool will

be located near the center of the site. Site improvements will include parking, small neighborhood parks, and landscape areas. Approximately 5.3 acres will be open space.

The development is proposed to be built in three phases with the northern portion built first followed by the southern half of the site. The third phase will be infill of two undeveloped portions on the northwest side of the site.

CURRENT SITE WATER USE

A residence, containerized tree nursery, and a reportedly unirrigated agricultural field occupy the site. One or two private wells supply water to the residence and tree nursery. According to the property seller, private well water use on the site has remained steady over the last ten years (as of 2019) (Decker, 2019).

The area immediately west of the Project site consists of additional containerized tree nursery land and an agricultural field. South of the Project site, across Half Road, is a vacant field with grasses and buildings used for industrial purposes. East of the Project site, across Mission View Drive, is a field with orchards and associated structures, and single-family residences. North of the Project site is an adjacent vacant parcel of land, health center and associated parking.

An estimate of the current groundwater use on the site is provided in **Table 1**.

Table 1. Current Water Use

Water Use Category on Project Site	Current Water Use (AFY)
	Private Well Use[1]
One Rural Residence (currently vacant)	0.64
Agriculture (containerized tree nursery)	17.90
Total Current Water Use	**18.54**

AFY=acre-feet/year

1. Private well water use provided by property seller (Decker, 2019) and based on Santa Clara Valley Water District water billing records for July 2016-July 2018 for Well 09503E16J005 (non-agricultural) and Well 09503E16Q001 (agricultural). Water use has reportedly been steady for the past 10 years (as of 2019). The agricultural well also supplies water to a tree nursery area to the west. It was estimated that about one-third of the agricultural well water use occurs on the Project site (53.7 AFY/3=17.9).

PROJECT WATER DEMAND

Table 2 shows the projected water demands for the Project at buildout. Two different water demand estimates are presented for each development type listed in **Table 2**. The first set of demands was estimated using recommended water demand unit factors presented in the City's Water System Master Plan (WSMP) (Akel, 2017); these demands are shown in the second column from the right on **Table 2**. These are based on the recommended factors that are consistent with the 2015 UWMP, account for continued water conservation efforts implemented by the City and are based on net development area. They are assumed to represent development that uses advanced water conservation fixtures and practices and has drought tolerant vegetation. The second set of demand estimates use typical factors based on the number of units or building areas (last column on the right on **Table 2**); the estimates for residential use are higher than those using the WSMP recommended factors. An average of the two (42.31 AFY) was selected as the proposed buildout water demand of the Project. It is assumed that unaccounted water, such as water losses and fire protection, is included in these water demand factors.

Once completed, the Project will involve a net increase in groundwater demands of about 23.77 AFY, which is the buildout Project demand of 42.31 AF minus estimated current water demand of 18.54 AF.

Table 2. Buildout Water Demands

Development Type	Area (acres)	Land Use	Water Use Demand Factor[1,2]	Water Demand based on WSMP net area[3] (AFY)	Water Demand based on units or building area[4] (AFY)
Single Family Detached	3.88	56 Residential units	1,700 gpd/net acre or 0.2 AFY/unit	7.39	11.20
Duet Units	4.55	64 Duet units	1,900 gpd/net acre or 0.2 AFY/unit	9.68	12.80
Condominiums	6.49	149 Condos	2,300 gpd/net acre or 0.18 AF/unit	16.72	26.82
Recreation Center	1.16	Rec Center with kitchenette, restrooms and pool	3 AFY[3]	3.00	3.00
Irrigation	Included in other categories	Total of 8.16 acres of irrigated area[4]	Estimated Total Water Use[4]	16.21	16.21
Public and Private Right of Ways	11.80	Streets and rights of ways	Included in Irrigation category		
Open Space	5.30	Medians, parks, other landscaping	Included in Irrigation category		
Total	**33.18**	**269 units**		**33.79**	**50.82**
			Average	**42.31**	

1. Gallons per day (gpd) per net acre values are from Water System Master Plan Table 3.4 column entitled: Recommended Factor (Consistent with 2015 UWMP) (Akel, 2017). Used Residential Detached Medium, Residential Attached Low, and Residential Attached Medium factors.
2. 0.20 AFY/unit for single family homes and 0.18 AFY/unit values from Paso Robles 2015 UWMP.

3. Estimated water use for clubhouse with kitchenette, restrooms and pool extrapolated from other similar recreational/spa centers.
4. Irrigated area and demand is Estimated Total Water Use (ETWU) from City's Water Efficiency Checklist (Dividend Homes, 2020) and from sheet L-12 of The Crosswinds at Morgan Hill Full Submittal Drawings and Tentative Tract Map (June 8, 2020).

CITY OF MORGAN HILL WATER DEMAND

This section summarizes water demands for the City of Morgan Hill. It includes discussion of factors that affect total water demand including climate, population, and mix of customer types such as residential, commercial, industrial, and irrigation. A comparison of Project water demand projections to 2015 UWMP demand projections occurs at the end of this section.

Climate and Population

Climate has a notable influence on water availability and demand on a seasonal and annual basis. During drought, influences include greater water demand for outdoor uses, specifically landscape irrigation, and less supply availability because of reduced precipitation and greater evaporation. The City has a temperate climate, characterized by dry summers and wet winters with average annual maximum and minimum temperatures of 74- and 46-degrees Fahrenheit, respectively. Reflecting this pattern, water demand in the City is greater in the summer than in the winter. Average annual rainfall is about 20 inches. The average annual ET deficit of 51 inches generally represents the amount of irrigation water needed to supplement the rainfall and maintain turf areas.

Climate change may affect future water supply availability for the City of Morgan Hill by increasing temperatures, changing local precipitation patterns with less rain in the winter months and more rain in the spring months, longer summers, and increasing water demands.

The City relies solely on groundwater for its water supply. The groundwater is managed by the Santa Clara Valley Water District (Valley Water). Valley Water is actively managing County supplies through programs such as recharge, conjunctive use, and conservation. Valley Water is developing a Climate Change Action Plan (CCAP) that will identify potential future climate change vulnerabilities and risks to all core service areas (including water supply and groundwater management) and will provide goals and strategies to reduce risks (SCVWD, 2020).

City population, a key factor in water demand, was evaluated in the 2015 UWMP. Between 2015 and 2040, the City's population is anticipated to increase by about 19,218 persons, a 45 percent increase. In response to past rapid growth, the City initiated a Residential Development Control System to regulate growth by limiting the number of new homes approved per year. As a result, the 2040 population estimate of 61,600 is a function of the maximum number of housing allotments and is a ceiling and not a target (Akel, 2016).

City's Current and Projected Water Demands

The City's current and projected water demands are shown in **Table 3,** as documented in the 2015 UWMP. In 2015, total water use, including unaccounted-for water was 5,846 AFY. Note that in 2015, City and State mandatory water use restrictions were in place in response to drought conditions but have since been lifted. Consequently, 2015 demands are lower than what would be expected under normal conditions. Total water use is anticipated to increase to 10,972 AFY by 2040. These projections are generally based on the population projections and the City's 2020 urban water use target of 159 gpcd (61,600 (2040 population) x 159 gpcd = 10,972 AFY).

Approximately 59 percent of the City's total water use is projected to be consumed by single-family residential customers. Multi-family residential customers will use about 10.8 percent and commercial/industrial/institutional customers will use about 9.8 percent. Landscape irrigation is estimated to consume about 19.8 percent of the potable demand between 2020 and 2040.

Table 3. City of Morgan Hill Current and Projected Water Use (AFY)

Customer Type	Current	Projected				
	2015	2020	2025	2030	2035	2040

From City's UWMP Table 4-2 and 4-4 (Akel, 2016)

Project Demands Compared to City UWMP Projected Demands

As mentioned previously, water use projections in the 2015 UWMP were based on population projections set forth in the City's 2016 General Plan Update[1] and on the City's 2020 urban water use target of 159 gpcd. This section compares 2015 UWMP population and water demand projections to those of the Project to determine if Project demands are included in the UWMP planning projections.

The population increase associated with the Project can be estimated assuming that each of the 269 units will have an average of 3 occupants[2] resulting in 807 new residents associated with the Project. This increase is well within the UWMP population increase of 3,400 anticipated to occur between 2020 and 2025.

1. The 2035 General Plan Update (adopted July 27, 2016) has a 2035 population of 58,200. It appears that the 2015 UWMP linearly projected population growth to 2040.
2. People per dwelling unit derived from information in Table 4-3A of 2015 UWMP (Akel, 2016).

A similar comparison can be made between estimated Project demands at buildout and UWMP demand increases. Project water demand is projected to be about 42.31 AFY at buildout (**Table 2**). **Table 3** shows that the UWMP-projected increase in single family demands would be 1,444 AFY between 2020 and 2040 and that multi-family demands would increase 262 AFY between 2020 and 2040. The Project would use about 2.5 percent (42.31/(1,444 + 262) of the 2015 UWMP-allotted single family plus multi-family growth in terms of demand.

The Project demands are within the UWMP water demand projection increases for residential water use sectors (2020 to 2040) (**Table 3**). Therefore, it is assumed that The Crosswinds at Morgan Hill Project water demands have been included in the 2015 UWMP projections. Note that this WSA does not address the ability of the City's water system to actually deliver water to the Project.

The City performs water supply and demand analysis on a five-year cycle as required by the State of California Department of Water Resources and as described in the City's UWMPs. The next UWMP is to be completed by July 1, 2021. UWMPs support the City's long-term resource planning to ensure that adequate water supplies are available to meet existing and future water needs.

CITY OF MORGAN HILL WATER SUPPLY

Water supply for the City of Morgan Hill is solely from groundwater. There are currently 15 active municipal groundwater wells located throughout the central and northern portions of the City that have a firm total capacity[3] of about 19,000 AFY (Akel, 2017 and City of Morgan Hill, 2019). The City has two other inactive wells that are permanently out of service.

The City pumps groundwater from two groundwater basins: the Santa Clara Valley Basin and the Gilroy-Hollister Valley Basin, with Cochrane Road coinciding approximately with the boundary between these two basins. The northern portion of the City overlies the Santa Clara Subbasin (DWR #2-009.02) in the Santa Clara Valley Basin while the southern portion of the City overlies the Llagas Subbasin (DWR basin 3-003.01) in the Gilroy-Hollister Valley Basin (**Figure 1**). The Santa Clara Subbasin has been divided into two areas for management purposes: the Coyote Valley Subarea and the Santa Clara Plain Subarea. The City overlies the Coyote Valley Subarea and has 3 active municipal wells in the Coyote Valley Subarea and 12 active wells in the Llagas Subbasin. The Santa Clara and Llagas subbasins are not adjudicated.

Santa Clara Subbasin

The Santa Clara Subbasin is a northwest trending valley that extends from the northern border of Santa Clara County to a groundwater divide near the City of Morgan Hill. It has a surface area of about 297 square miles and is bounded by the Santa Cruz Mountains to the west and the Diablo Range to the east (SCVWD, 2016). Groundwater north of the

3. Firm total capacity assumes the largest well is out of service.

groundwater divide near Cochrane Road flows north and northwest to San Francisco Bay while groundwater to the south flows southeast in the Llagas Subbasin toward the Pajaro River, at the boundary of San Benito County, and ultimately to Monterey Bay. The groundwater divide location moves north or south as much as one mile depending upon local groundwater conditions (SVCWD, 2016). The Coyote Valley Subarea is in the southern portion of the Santa Clara Subbasin and is about 7 miles long and 2 miles wide.

The Santa Clara Subbasin consists of Quaternary alluvium deposits of unconsolidated gravel, sand, silt and clay that eroded from adjacent mountain ranges. It contains interfingering alluvial fans, stream deposits and terrace deposits. The slightly or semi-consolidated alluvial deposits of the Santa Clara Formation underlie the unconsolidated young alluvial sediments in some areas of the Santa Clara Subbasin.

The Santa Clara Plain extends from Santa Clara County's northern boundary to approximately Metcalf Road in Coyote Valley. Its thickness ranges from 150 feet near Coyote Narrows/Metcalf Road to over 1,500 feet in the interior of the Subarea and thins towards the western and eastern edges. A shallow aquifer zone occurs within 150 feet of ground surface and a 20 to 100-foot-thick aquitard separates the shallow aquifer from a lower, principal aquifer zones forming a confined area in the central portion of the Subarea. Most of the wells tap the lower zone which exists at depths between 200 and 1,000 feet (SCVWD, 2016).

The Coyote Valley Subarea consists of thick alluvial sand and gravel deposits with interbedded thin, discontinuous clays and has no laterally extensive aquitard. The aquifer sediments overlying the Santa Clara Formation vary in thickness from a few feet along the west side of the valley to more than 400 feet along the east side (SCVWD, 2016).

Recharge occurs along the edges and southern portion of the Santa Clara Subbasin. This recharge contributes to the recharge of principal aquifers in the confined area through subsurface flow (SCVWD, 2016). Groundwater generally flows toward the north or northwest, following surface topography and on a local scale, flows toward areas of high pumping.

The Santa Clara Subbasin groundwater is generally of good quality and does not need treatment beyond disinfection (SCVWD, 2016). Santa Clara Plain groundwater quality is typically very good with only infrequent detections above health-based levels. Coyote Valley groundwater is typically good quality with the exception of elevated nitrate concentrations in some areas. Nitrate concentrations in the Coyote Valley are from fertilizers and septic systems in this more rural and agricultural-based Subarea (SCVWD, 2016).

Llagas Subbasin

The Llagas Subbasin is a northwest-trending, elongated valley in the southern part of Santa Clara County. It is the northern part of the Gilroy-Hollister Groundwater Basin and is bounded by the Santa Cruz Mountains to the west and the Diablo Range to the east. The Llagas Subbasin is about 15 miles long and 3 to 6 miles wide with a surface area of 88 square miles (SCVWD, 2016).

Like the Santa Clara Subbasin, it consists of Quaternary alluvium deposits of unconsolidated gravel, sand, silt and clay that eroded from adjacent mountain ranges and has interfingering alluvial fans, stream deposits and terrace deposits. The Llagas Subbasin thickness ranges from about 500 feet in the north to over 1,000 feet beneath the Pajaro River (SCVWD, 2016). Confined conditions exist in the central and southern portions of the Subbasin.

Recharge occurs along the northern, western, and eastern edges of the Subbasin. Groundwater generally flows south, toward the Pajaro River, following surface topography and on a local scale, flows toward areas of high pumping.

Llagas Subbasin groundwater is generally of good quality with the exception of localized elevated nitrate and perchlorate detections (SCVWD, 2016). The most significant single environmental release in the Llagas Subbasin was the perchlorate contamination associated with the Olin site[4]. The site has been undergoing remediation since 2004 and the plume has diminished significantly to an area mostly south of Tennant Avenue.

Groundwater Management

The Santa Clara Valley Water District (SCVWD or Valley Water) is the Groundwater Sustainability Agency for the Santa Clara and Llagas subbasins in accordance with the Sustainable Groundwater Management Act (SGMA).

SGMA became effective on January 1, 2015 and provides a framework for sustainable management of groundwater resources by local agencies. The Santa Clara and the Llagas subbasins are on the following timeline because they were designated as high priority basins but are not overdrafted:

- Local agencies must form local groundwater sustainability agencies (GSAs) by 2017
- GSAs must prepare and adopt groundwater sustainability plans (GSPs) by 2022; and
- Once GSPs are adopted, GSAs must implement them and achieve sustainability within 20 years.

Based on its long history of sustainable management, Valley Water submitted an Alternative Groundwater Sustainability Plan to California's Department of Water Resources (DWR) to fulfill its SGMA requirements. This alternative, entitled 2016 Groundwater Management Plan (GWMP) was submitted in 2016 (SCVWD, 2016). In accordance with SGMA, 2017 and 2018 Water Year[5] Reports also have been prepared that provide information on groundwater conditions and management activities to maintain the long-term viability of groundwater resources in the Santa Clara and Llagas subbasins. Valley Water also produces calendar-year based information on groundwater levels, storage, land subsidence and groundwater quality conditions.

4. Todd Engineers and Kennedy/Jenks Consultants, Groundwater Vulnerability Study, prepared for SCVWD, September 2009.

5. A water year extends from October 1 of the previous year to September 30. For example, water year 2018 is from October 1, 2017 to September 30, 2018.

The 2019 Water Year Report (SCVWD, 2020) concluded the following:

- Having previously fully recovered to pre-drought conditions, groundwater elevation and storage remained in healthy condition through Water Year (WY) 2019.
- WY 2019 was a wet year and adequate surface water supplies were available to support a full managed recharge program with 81,400 AF of local and imported surface water used for groundwater replenishment.
- Treated water delivered by Valley Water (103,000 AF) and recycled water use (17,100 AF) also provided in-lieu recharge, and countywide water conservation programs reduced water demands by more than 70,000 AF.
- This comprehensive recharge continues to support a balanced long-term water budget.
- In WY 2019, inflows exceeded outflows in the Santa Clara and Llagas subbasins, resulting in a net increase in storage of 11,400 and 6,600 AF, respectively.
- Valley Water continues to implement the comprehensive activities described in the GWMP (SCVWD, 2016). These include:
    - Maintain existing conjunctive water management programs and evaluate opportunities for enhancement or increased efficiency.
    - Continue to aggressively protect groundwater quality through Valley Water programs and collaboration with land use agencies, regulatory agencies, and basin stakeholders.
    - Continue to incorporate groundwater sustainability planning in Valley Water planning efforts.
    - Maintain adequate monitoring programs and modeling tools.
    - Continue and enhance groundwater management partnerships with water retailers and land use agencies.
    - Evaluate the potential new authorities provided by SGMA.

Tables 4 and **5** on the next page are from the 2019 Water Year Report (SCVWD, 2020) and summarize WY 2019 groundwater pumping and total water use. Most water use in the Santa Clara Subbasin is for municipal and industrial use while most water use in the Llagas Subbasin is for agricultural purposes. Imported water is a large component of supply in the Santa Clara Subbasin.

Table 4. Groundwater Pumping by Water Use in Water Year 2019

Water Use Sector	Measurement Method	Santa Clara Subbasin (AFY)	Llagas Subbasin (AFY)	Total Pumping (AFY)
M&I	Metered	61,600	16,400	78,000
	Estimated	1,500	600	2,100
Domestic	Metered	100	200	300

Agricultural	Metered	2,700	16,900	19,600
	Estimated	900	6,600	7,500
Total		**67,200**	**42,400**	**109,600**

From Table 1 in 2019 WY Report (SCVWD, 2020)

Table 5. Santa Clara County Total Water Use in Water Year 2019

Water Use (AFY)	Santa Clara Subbasin	Llagas Subbasin	Total	Measurement Method	Source	Sector
Groundwater Pumped	67,200	42,400	109,600	Metered (89%) and estimated	Natural recharge, managed recharge of local runoff and imported (SWP/CVP) water	M&I, domestic and agricultural
Valley Water Treated Water	103,000	0	103,000	Metered	Local runoff and imported (SWP/CVP) water	M&I
Valley Water Raw Surface Water Deliveries	700	1,300	2,000	Metered (95%) and estimated	Local runoff and imported (SWP/CVP) water	M&I, domestic and agricultural
SFPUC Supplies to Local Retailers	43,300	0	43,300	Metered	Surface water reservoirs	M&I
Recycled Water	15,200	1,900	17,100	Metered	Treated wastewater	M&I and agricultural
Total	**229,400**	**45,600**	**275,000**			

From Table 2 in 2019 WY Report (SCVWD, 2020)

Groundwater Use and Supply

Table 6 lists Morgan Hill's annual groundwater use between 2011 and 2018. About 80 percent of the City's supplies are from the Llagas Subbasin. Groundwater use declined in 2015, reflecting State-wide water use restrictions in response to the drought but rebounded in recent years.

Table 6. City of Morgan Hill 2011 to 2018 Groundwater Use (AFY)

Groundwater Source	2011	2012	2013	2014	2015	2016	2017	2018
Llagas Subbasin of the Gilroy-Hollister Groundwater Basin	6,076	6,203	7,454	6,195	4,741	4,480	5,155	5,832
Santa Clara Subbasin, Coyote Valley Subarea of the Santa Clara Valley Groundwater Basin	1,381	1,374	1,484	1,300	1,105	1,800	1,942	1,449
Total	**7,457**	**7,577**	**8,938**	**7,495**	**5,846**	**6,280**	**7,097**	**7,281**

From 2015 UWMP Table 6-1 (Akel, 2016) and Morgan Hill (2019)

Table 7 lists projected supplies to 2040 as documented in the UWMP. It includes natural recharge to the Llagas and Santa Clara subbasins (22,500 AFY and 2,400 AFY, respectively) as well as recharged imported water and recycled water (39,000 AFY to 48,500 AFY). These other water supplies were included in the 2015 UWMP (Akel, 2016) for completeness of the Llagas and Coyote Valley groundwater budgets. While the City of Morgan Hill does not directly contract with Valley Water for water supplies, it is dependent upon the additional water that Valley Water provides for recharge or to offset pumping in the Llagas and Santa Clara subbasins.

Table 7. City of Morgan Hill Projected Supply (AFY)

Water Supply Source	Projected				
	2020	2025	2030	2035	2040
Llagas Subbasin (Natural Recharge)	22,500	22,500	22,500	22,500	22,500
Santa Clara Valley Subbasin (Natural Recharge)	2,400	2,400	2,400	2,400	2,400
Other[1]	39,000	42,900	46,600	48,400	48,500
TOTAL	**63,900**	**67,800**	**71,500**	**73,300**	**73,400**

From 2015 UWMP Table 6-9 (Akel, 2016)

1. Other includes raw water and local surface water deliveries that are managed and negotiated by Valley Water for recharge in the Llagas Subbasin and Coyote Valley Subarea. It also includes City of Gilroy recycled water demand, which offsets pumping from the Llagas Subbasin.

COMPARISON OF SUPPLY AND DEMAND

To determine water supply sufficiency, a comparison of supply and demand during normal, single dry and multiple dry years during a 20-year projection was conducted. Based on the City's 2015 UWMP, **Table 8** summarizes water supply and demand for the City in a normal year, while **Tables 9** and **10** show supply and demand in single-year and multi-year dry conditions. On an annual basis, the City has been able to provide sufficient supplies to meet demand during normal, single-dry, and multiple-dry year periods.

Review of **Tables 8**, **9**, and **10** shows that water supply will decrease in times of drought, reflecting less natural recharge but demands were assumed to remain the same. If a severe drought occurs, the City could impose water use restrictions that could temporarily reduce water use to per capita levels similar to those in 2015 (123 gpcd). For comparison, the UWMP assumed projections based on a 159 gpcd use.

The Project site buildout water demands of 42.31 AFY (**Table 2**) are within the UWMP projections and thus considered to be included in the demand components of the 2015 UWMP summary tables listed below.

Table 8. Normal Year Supply and Demand Comparison (AFY)

	2020	2025	2030	2035	2040
Supply Totals	63,900	67,800	71,500	73,300	73,400
Demand Totals	8,549	9,155	9,760	10,366	10,972
Difference	55,351	58,645	61,740	62,934	62,428

Difference	32,986	32,380	31,775	31,169	30,563

From 2015 UWMP, Table 7-4 (Akel, 2016) and errata sheet (revised data available on DWR website)

Note that the groundwater supply amounts listed in **Tables 8**, **9**, and **10** are a shared resource managed by Valley Water through the SGMA process. The 2015 UWMP also included tables listing projected supplies and demands for the entire Llagas Subbasin and for the entire Coyote Valley Subarea using data that Valley Water provided to the City in mid-2016. These tables are shown in **Appendix A**. DWR requested that only City demands be included in these tables and the modified tables are the ones shown above.

Those subbasin or subarea-wide supply and demand comparisons in the 2015 UWMP indicated potential deficits, especially in multi-year droughts (see **Appendix A**). These deficits could be as high as 32,533 AF in the third year of a severe drought (see **Appendix A** Table 7-4). However, more recently, the 2019 Water Year Report (SCVWD, 2020) concluded that Valley Water's comprehensive recharge continues to support balanced long-term water budgets for these two subbasins.

As discussed above, Valley District continues to implement its groundwater sustainability program to maintain the long-term viability of groundwater resources.

CONCLUSIONS

The findings of this water supply and demand evaluation are summarized below.

- The Crosswinds at Morgan Hill Project will be built on a 33-acre site. Currently, one residence and a containerized tree nursery occupy the site.
- The Project will consist of 269 residential units (56 single family, 64 duet, and 149 condominium units) and a recreational center.
- The City of Morgan Hill will supply the Project with potable water. Groundwater is the only source of supply to the City.
- Current site water usage averages about 18.54 AFY.
- Once completed, the Project will use an estimated 42.31 AFY of water resulting in a net increase of groundwater use of about 23.77 AFY.
- Water supply needed to serve the Project's water demand can be considered as included in the 2015 UWMP projections.
- The City's sole source of supply, groundwater from the Llagas and Santa Clara subbasins, is a shared resource managed by Valley Water through the SGMA process. The 2019 Water Year Report (SCVWD, 2020) for SGMA reporting concluded that Valley Water's comprehensive recharge continues to support a balanced long-term water budgets for these two subbasins.

In conclusion:

The City's water supply is from groundwater, which is a shared resource. The ongoing, active management of the Llagas and Santa Clara subbasins by Valley Water through the SGMA process and its strong partnership with large groundwater pumpers, including the City of Morgan Hill, is expected to result in continued sustainable groundwater management in the future resulting in a reliable long-term water supply for the Project.

Appendix A: Draft EIR Comment Letters
Appendix B: Technical Reports and Supporting Documentation

Section 1.0 Introduction

This document, together with the Draft Environmental Impact Report (Draft EIR), constitutes the Final Environmental Impact Report (Final EIR) for the Crosswinds Residential project.

1.1 Purpose of the Final EIR

In conformance with the California Environmental Quality Act (CEQA) and CEQA Guidelines, this Final EIR provides objective information regarding the environmental consequences of the proposed project. The Final EIR also examines mitigation measures and alternatives to the project intended to reduce or eliminate significant environmental impacts. The Final EIR is intended to be used by the City of Morgan Hill and any Responsible Agencies in making decisions regarding the project.

Pursuant to CEQA Guidelines Section 15090(a), prior to approving a project, the lead agency shall certify that:

(1) The Final EIR has been completed in compliance with CEQA;
(2) The Final EIR was presented to the decision-making body of the lead agency, and that the decision-making body reviewed and considered the information contained in the final EIR prior to approving the project; and
(3) The Final EIR reflects the lead agency's independent judgment and analysis.

1.2 Contents of the Final EIR

CEQA Guidelines Section 15132 specify that the Final EIR shall consist of:

a) The Draft EIR or a revision of the Draft;
b) Comments and recommendations received on the Draft EIR either verbatim or in summary;
c) A list of persons, organizations, and public agencies commenting on the Draft EIR;
d) The Lead Agency's responses to significant environmental points raised in the review and consultation process; and
e) Any other information added by the Lead Agency.

1.3 Public Review

In accordance with CEQA and the CEQA Guidelines (Public Resources Code Section 21092.5[a] and CEQA Guidelines Section 15088[b]), the City shall provide a written response to a public agency on comments made by that public agency at least 10 days prior to certifying the EIR. The Final EIR and all documents referenced in the Final EIR are available for public review at the City of Morgan Hill, Community Development Department on weekdays during normal business hours. The Final EIR is also available for review on the City's website: (https://www.morganhill.ca.gov/2088/Half-Dividend-Crosswinds-Residential-Dev).

Section 2.0 Draft EIR Public Review Summary

The Draft EIR for the Crosswinds Residential project, dated November 2022, was circulated to affected public agencies and interested parties for a 60-day review period from November 4, 2022, through January 3, 2023. The City undertook the following actions to inform the public of the availability of the Draft EIR:

- A Notice of Availability of Draft EIR was published on the City's website: (https://www.morganhill.ca.gov/2088/Half-Dividend-Crosswinds-Residential-Dev) and in the Morgan Hill Times;
- Notification of the availability of the Draft EIR was mailed to project-area residents and other members of the public who had indicated interest in the project;
- The Draft EIR was delivered to the State Clearinghouse on November 3, 2022, as well as sent to various governmental agencies, organizations, businesses, and individuals (see Section 3.0 for a list of agencies, organizations, businesses, and individuals that received the Draft EIR); and
- Copies of the Draft EIR were made available on the City's website (https://www.morganhill.ca.gov/2088/Half-Dividend-Crosswinds-Residential-Dev).

Section 3.0 Draft EIR Recipients

CEQA Guidelines Section 15086 requires that a local lead agency consult with and request comments on the Draft EIR prepared for a project of this type from responsible agencies (government agencies that must approve or permit some aspect of the project), trustee agencies for resources affected by the project, adjacent cities and counties, and transportation planning agencies.

The NOA for the Draft EIR was sent to owners and occupants adjacent to the project site and to adjacent jurisdictions. The following agencies received a copy of the Draft EIR from the City or via the State Clearinghouse:

- California Air Resources Board
- California Department of Conservation
- California Department of Fish and Wildlife, Bay Delta Region 3
- California Department of Forestry and Fire Protection
- California Department of Housing and Community Development
- California Department of Parks and Recreation, California Department of Resources Recycling and Recovery
- California Department of Toxic Substances Control
- California Department of Transportation, District 4
- California Department of Water Resources
- California Native American Heritage Commission
- California Natural Resources Agency
- California Office of Historic Preservation
- California Public Utilities Commission
- California Regional Water Quality Control Board, Central Coast Region 3 (RWQCB)
- California State Lands Commission
- State Water Resources Control Board, Division of Drinking Water
- State Water Resources Control Board, Division of Drinking Water, District 17
- State Water Resources Control Board, Division of Water Quality

Section 4.0 Responses to Draft EIR Comments

In accordance with CEQA Guidelines Section 15088, this document includes written responses to comments received by the City of Morgan Hill on the Draft EIR.

Comments are organized under headings containing the source of the letter and its date. The specific comments from each of the letters and/or emails are presented with each response to that specific comment directly following. Copies of the letters and emails received by the City of Morgan Hill are included in their entirety in Appendix A of this document. Comments received on the Draft EIR are listed below.

Comment Letter and Commenter **Page of Response**

Regional and Local Agencies 6

A. County of Santa Clara, Roads and Airports Department (dated December 22, 2022) 6

B. Santa Clara Valley Transportation Authority (dated January 3, 2023) 7

C. Valley Water (dated January 3, 2023) 10

Organizations, Businesses, and Individuals 19

D. Joe Baranowski (January 3, 2023) 19

Regional and Local Agencies

A. County of Santa Clara, Roads and Airports Department (dated December 22, 2022)

Comment A.1: The County of Santa Clara Roads and Airports Department (The County) appreciates the opportunity to review the Public Notice of Availability of an Environmental Impact Report for Half-Dividend (Crosswinds) Residential Development. We submit the following comments:

- We recommend that the City take over/annex the full road maintenance and improvement along the site's Half Road frontage up to Mission View Dr.

Response A.1: As stated in Section 4.17, Transportation, Page 192 of the Draft EIR, the project would provide sidewalks along its frontages along Half Road (up to Mission View Drive), Mission View Drive, and DePaul Drive. As described on Page 206, the project applicant will pay a fair share contribution toward the installation of a signal at the Half Road and Mission View Drive intersection. No other improvements are proposed along Half Road. Comment A.1 does not question the adequacy of the Draft EIR analysis. The recommendation for the City to take over/annex the full road maintenance and improvement is outside of the project scope. The City does not currently have plans to annex the road. The County has the option to discuss this recommendation with the City; this discussion would be separate from the project.

Comment A.2:

- We would like to know who will maintain the new signalized intersection of Mission View Dr and Half Rd. if approved. County maintains both approaches of Half Rd but not Mission View Dr.

Response A.2: Comment A.2 does not question the adequacy of the Draft EIR analysis. As described on Page 206 of the Draft EIR, the project applicant will pay a fair share contribution toward the installation of a signal at the Half Road and Mission View Drive intersection under Year 2030 cumulative plus project conditions. The City will fund the maintenance of the new intersection.

Comment A.3:

- Provide pedestrian connection between the cul-de-sac at DePaul Dr and Half Rd.

Response A.3: As stated in Section 4.17, Transportation in the Draft EIR, sidewalks would be located along DePaul Drive including the proposed cul-de-sac north of Half Road. Although, no pedestrian connection is proposed between the cul-de-sac, as shown on plan sheet L.10, an emergency vehicle access (EVA) path is proposed to be located between the cul-de-sac and Half Road, which pedestrians/bicyclists could also use to cross from the cul-de-sac to Half Road.

Comment A.4:

- 8. The Mission View Drive and Half Road intersection is projected to operate at an unacceptable LOS F during both the AM and PM peak hours under Year 2030 Cumulative without and with project conditions. Additionally, based on the peak hour traffic signal warrant checks, this intersection would have traffic volumes that meet thresholds that warrant signalization during both the AM and PM peak hours under Year 2030 Cumulative without and with project conditions. This constitutes an adverse effect on intersection operations based on the City's level of service standards.
    - The County's Condition of Approval: The project applicant shall pay a fair share contribution toward installing a signal at the Mission View Drive and Half Road intersection.

Response A.4: Comment A.4 includes an excerpt from Page 206 of the Draft EIR regarding the project's effect on operations of Mission View Drive and Half Road and the County's recommended condition of approval. As stated in the Draft EIR (Page 206), as a condition of approval, the project applicant shall pay a fair share contribution toward the installation of a signal at the Mission View Drive and Half Road intersection, which is consistent with the County's recommendation.

B. Santa Clara Valley Transportation Authority (dated January 3, 2023)

Comment B.1: The Vehicle Miles Traveled Impact and Mitigation Measures
The DEIR notes that the proposed project would have a Significant and Unavoidable impact in the area of Vehicle Miles Traveled (VMT) during project operations, Impact TRN-2.2. The DEIR and Transportation Impact Analysis (TIA) report indicate that "The project applicant would need to implement VMT reduction measures to achieve a 24 percent reduction (27.41 to 20.94) in its VMT per capita for the proposed residential project to reduce the project's VMT impact to less than significant (under Options 1 and 2). However, the available feasible mitigation measures are not capable of such reduction" (DEIR p. 193).:

Response B.1: Comment B.1 summarizes the VMT impact and mitigation measure required, as discussed in Section 4.17 Transportation, Page 193 of the Draft EIR. This comment does not question the adequacy of the Draft EIR analysis. Therefore, no further response is required.

Comment B.2: In light of the fact that this project will have a Significant and Unavoidable VMT impact, VTA recommends that the City work with the project applicant to provide further measures to incrementally reduce project VMT. In addition to those measures included in Mitigation Measure TRN-2.2, VTA recommends the following:

- The subsidized transit pass program included in Mitigation Measure TRN-2.2 should include a monitoring and verification mechanism to ensure that the passes are being provided over time. For instance, the City can require that the project management entity/Homeowners

Association submit a receipt annually showing that the required transit passes have been purchased, and documentation showing that the passes have been distributed to residents.

Response B.2: Mitigation measure MM TRN-2.1 on page 193 and Appendix G Transportation Analysis pages ii, 12, 13, 48, and 49 of the Traffic Impact Analysis of the Draft EIR have been updated to state that the project applicant shall develop and implement a Transportation Demand Management (TDM) plan which targets achieving a reduction in residential vehicle trips to and from the site. The TDM plan shall be prepared by a qualified traffic consultant and in coordination with the City of Morgan Hill Development Services Director or Designee. The TDM plan shall quantify the reduction in VMT. The TDM shall require the project applicant to make a financial contribution to the City's on-site demand rideshare service (MoGo), as a one-time or annual financial contribution based on City approval, or the management entity/Homeowners Association (HOA) will be required to provide fully (100 percent) subsidized annual VTA transit passes for all project homeowners (a maximum of one transit subsidy per residential unit, which would result in up to 269 transit passes per year). This subsidized transit program shall be approved by the City of Morgan Hill's Public Services Director or Director's designee prior to issuance of occupancy. The suggested mitigation measure for the Homeowners Association to submit a receipt and documentation showing that the required transit passes have been distributed would not reduce the significant and unavoidable VMT impact, as it would serve to ensure the implementation of the measure, but would not lead to further reduction in VMT beyond what the Draft EIR has disclosed could be achieved by the measure. Nonetheless, the mitigation has been updated to include VTA's recommendation (refer to Section 5.0 Draft EIR Text Revisions for the revisions to mitigation measure MM TRN-2.1 and Appendix B of this FEIR, for the revisions to the Transportation Analysis).

Comment B.3:

- The project should provide a mid-block pedestrian crossing to connect between the new sidewalk along the project's Mission View Drive frontage and the existing sidewalk on the east side of Mission View Drive. Consideration should be given to providing bulb- outs and a pedestrian signal or warning device to improve safety for pedestrians crossing Mission View Drive to access VTA bus services and other destinations north of the site along Cochrane Road.

Response B.3: The project does not propose a mid-block crosswalk along Mission View Drive, as suggested by the comment. Furthermore, the posted speed limit on Mission View Drive is 40 miles per hour. However, vehicle travel speeds along Mission View Drive are likely greater than 40 miles per hour due to the spacing and lack of controlled intersections between Cochrane Road and Half Road. Given the speeds along Mission View Drive, a mid-block crossing along Mission View Drive as suggested by the comment would require the construction of a median along

Mission View Drive to physically restrict and discourage crossing at location other than the mid-block crossing. The project does not propose a mid-block crosswalk along Mission View Drive, as suggested by the comment, since its implementation would require a right-of-way along Mission View Drive that is not controlled by the project applicant. Controlled crossings at the intersections of Cochrane Road with Mission View Drive and DePaul Drive are proposed as a part of the project (as described on Page 192 of the Draft EIR). Improvements on Mission View Drive would include continuous sidewalks along the project frontage and a controlled crossing at the project access point and at its future signalized intersection with Half Road. As stated on Page 192 of the Draft EIR, the proposed project would improve pedestrian safety and circulation throughout the project area. Therefore, the project would not result in a significant impact to pedestrian facilities or safety in the area.

Comment B.4:

- While VTA understands that there will be no general vehicle (non-emergency vehicle) access between the DePaul Drive extension and Half Road, the project should provide a connection for pedestrians and cyclists at the end of the proposed DePaul Drive cul-de-sac, to improve connectivity to the points south including Live Oak High School and the Madrone Channel Trail.

Response B.4: As stated above, the project would include sidewalks along the DePaul Drive including sidewalks, including a sidewalk along the cul-de-sac. The project would also include sidewalks along the Mission View Drive and Half Road frontages to improve the connectivity to Live Oak High School and the Madrone Channel Trail. As stated in Response B.3., the project would improve connectivity in the project area. As a part of the City's Bikeways, Trails, Parks and Recreation Master Plan, a planned multi-use trail would be constructed by the City and located along the west side of Mission View Drive by 2030. The multi-use trail would be a two-way, off-street paved trail for pedestrian and bicycle use. In addition, as mentioned on Page 192 of the Draft EIR, the project could generate up to three new bicycle trips during each of the peak hours and the demand generated by the proposed project could be accommodated by existing bicycle facilities in the vicinity of the site. The proposed project would provide adequate pedestrian and bicycle access to Live Oak High School and the Madrone Channel Trail.

Comment B.5: Bus Stop Improvements

VTA previously submitted these comments, however the site plan was not updated to reflect any recommendations. These recommendations help support further reducing solo vehicle trips. VTA Route 87 serves the frontage of the project on Mission View Drive. The stop spacing in- between the two nearest stops of the development is 3,400 feet and does not have close enough pedestrian facilities nearby to access the nearest stops. A new southbound bus stop should be installed after the main entrance on Mission View Drive. A bus stop in the northbound direction is also recommended on the condition that there will be a signalized crosswalk for the new development. The preferred location for the new bus stop is past the main entrance on Mission View Drive. VTA

would like to determine the location when off-site plans are drafted (see attachment). VTA also recommends to:

- Install street lighting at the bus stop
- Place trees and landscaping outside of the bus stop area C
- Install a new passenger pad 8'x40' minimum per VTA Standards

Response B.5: As stated on Page 193 of the Draft EIR, per VTA's recommendation, the project applicant will be required to pay a fair share contribution toward the installation of a southbound bus stop after (or adjacent to) the main entrance on Mission Drive. The condition of approval will be updated to state that the project applicant will also make a fair share contribution toward a northbound bus stop on Mission View Drive (refer to Section 5.0 Draft EIR Text Revisions of this Final EIR). The bus stops will include street lighting, landscaping, and a new passenger pad as mentioned in the condition of approval. The new bus stop would be consistent with the VTA standards for the location of the proposed landscaping/trees and the dimensions of the new passenger pad. The bus stop locations are not included on the project site plan since the project applicant will be contributing toward the payment of the bus stop, however, the bus stop would not be constructed as a part of the project. City staff will coordinate with VTA regarding the proposed location of the new bus stops; this coordination will be separate from the proposed project.

C. Valley Water (dated January 3, 2023)

Comment C.1: The Santa Clara Valley Water District (Valley Water) has reviewed the draft Environmental Impact Report (EIR), dated November 2022, for the proposed Crosswinds residential development on Half Road (Project). The following comments are based on Valley Water's review of the draft EIR:

1. **Section 4.9.2.1 – Project Impacts, Water Well and Septic System (Page 126):** Valley Water agrees with the DEIR evaluation that the one abandoned well located during the on-site reconnaissance should be properly destroyed in accordance with Valley Water Ordinance 90-1. Based on Valley Water well records, there is one active water supply well (09S03E16J005) with a well log located on APN 728-30-004. However, due to the long agricultural history of the Santa Clara and Llagas subbasins and subsequent land development, there are likely many abandoned or unregistered wells in the subbasins. While some of these wells may have been sealed prior to well permitting requirements, many have open casings and may be discovered during construction of the Project. If other abandoned or unregistered wells or well-like structures are discovered or encountered during Project construction, Valley Water's Wells Hotline should be immediately contacted to assist in the identification of these wells or structures and help determine the appropriate means of addressing them, such as proper destruction by a C-57 licensed driller with related work permit and inspection by Valley Water Wells Unit. Therefore, Valley Water also agrees with MM HAZ-2.7 listed in Table 1.2-1, which states "If the wells are identified, or subsequently encountered during earthwork activities, the wells shall be properly destroyed in accordance with Valley Water Ordinance 90-1.".

Response C.1: As mentioned in Comment C.1, mitigation measure MM HAZ-2.7 on Pages 126 and 127 of the Draft EIR requires wells identified during earthwork activities to be properly destroyed in accordance with Valley Water Ordinance 90-1. Based on Comment C.1, the mitigation has been updated to also require the project applicant or contractor to contact Valley Water's Wells Hotline immediately to assist in the identification of abandoned/unregistered wells or structures and help determine the appropriate means of addressing them (refer to Section 5.0 Draft EIR Text Revisions of this Final EIR). As stated in the Draft EIR, Page 127, with the implementation of mitigation measure MM HAZ-2.7, the abandonment of the well and septic system would not result in a significant environmental impact.

Comment C.2: Section 4.10.1.1 – Hydrology and Water Quality, Existing Conditions, Groundwater (Page 133): Previously on page 126, the DEIR stated there was only one water well identified during the on-site reconnaissance. However, this section of text on page 133 explains "there are two existing wells on the property associated with agricultural activities that have been occurring on the property for decades. With the cessation of agricultural activities, the wells are no longer in regular use." If there are two wells on the property, please fix the text on 126 for consistency to include the correct number of wells and provide details that both abandoned wells will be destroyed.

Response C.2: Based on Comment C.2, a correction to Page 133 has been made to state that there is one existing well on the property associated with residence on-site. Given the residence is vacant, the well is no longer in regular use (refer to Section 5.0 Draft EIR Text Revisions of this Final EIR). As stated in mitigation measure MM HAZ-2.7 and Response C.1, the well will be properly abandoned, in accordance with Valley Ordinance 90-1.

Comment C.3: 3. Section 4.10.1.1 – Hydrology and Water Quality, Existing Conditions, Groundwater Section and Post-Construction Water Quality Section (Pages 133 and 136): The DEIR states "The site does not contain aquifer recharge facilities, such as streams or ponds." While this statement is true, the stormwater runoff options 1 and 2 of the post-construction water quality (page 136) both mention Madrone Channel, which is a Valley Water managed aquifer recharge facility. Option 1 states "discharge into the public storm drain system to Madrone Channel" and option 2 states "no discharge to Madrone Channel". Valley Water recommends adding text to either page 133 or 136 explaining that Madrone Channel is used by Valley Water for managed aquifer recharge that supports groundwater sustainability in the Llagas Subbasin. Additional details about the managed recharge in Madrone Channel can be found in Valley Water's 2021 Groundwater Management Plan, Appendix I (https://www.valleywater.org/your-water/where-your-water-comes/groundwater/sustainable). Since Option 1 could discharge stormwater directly into Madrone Channel and Madrone Channel is a managed recharge facility, Valley Water recommends adding text to explain if Option 1 would have any impact on the quality of stormwater flowing into Madrone Channel and thus the quality of recharge to the aquifer.

Response C.3: Based on Comment C.3, Page 136 of the Draft EIR has been updated to state that under Option 1, the site would collect the runoff filtered through the bioretention areas and underground retention facilities, before being discharged into the public storm drain system to Madrone Channel. The Madrone Channel is used by Valley Water for managed aquifer recharge that supports groundwater sustainability in the Llagas Subbasin. Since runoff would be treated prior to being discharged to Madrone Channel, this option would not result in a significant impact to the quality of stormwater flowing into the Madrone Channel or quality of recharge to the aquifer (refer to Section 5.0 Draft EIR Text Revisions of this Final EIR).

Comment C.4: **4. Section 4.10.2.1 – Hydrology and Water Quality, Project Impacts, Impact HYD-2 (Page 136):** The EIR correctly states that the Project site is not in a groundwater recharge facility. Although the site is not a part of, or adjacent to, a formally managed recharge facility, the project is in an area of the county that supports natural groundwater recharge (see the 2021 Groundwater Management Plan for the Santa Clara and Llagas Subbasin). Natural groundwater recharge is an important element of the county's overall water supply, representing approximately 15% of the supply available. The cumulative effect of development throughout the county over the last 50 years has substantially reduced natural groundwater recharge as naturally pervious surfaces have been developed with impervious surface. Natural groundwater recharge is especially important in the Coyote Valley sub-area of the Santa Clara Subbasin, which relies exclusively on natural recharge and managed in-stream recharge in Coyote Creek to maintain groundwater levels. To avoid the potential cumulative impact to natural groundwater recharge from new impervious surface, the proposed bioretention basins and other elements of the stormwater management plan should be designed to maintain as much natural groundwater recharge that is currently provided by the property.

Response C.4: Section 4.10.2.2 Cumulative Impacts, Page 138 of the Draft EIR discusses cumulative hydrology and water quality impacts. This cumulative hydrology discussion has been updated to state that the proposed bioretention basins would be designed to maintain as much on-site groundwater recharge as is feasible to avoid the cumulative impacts to natural groundwater recharge from new impervious surfaces. The site's stormwater facilities would be sized to allow infiltration of the 95th percentile, 24-hour rainfall event. In addition, the City standards require detention of the 25-year storm; under Option 1, stormwater would be directed to underground retention facilities designed for a 25-year, 24-hour storm event and under Option 2, 100 percent of stormwater from the site would be directed to underground retention facilities designed for a 100-year storm event. Refer to Section 5.0 Draft EIR Text Revisions of this Final EIR.

Comment C.5: **5. Section 4.10.2.1 – Hydrology and Water Quality, Project Impacts, Post-Construction Water Quality (Page 136):** The bottom of the page states "The existing well on the 33-acre property would be properly removed under permit from Valley Water, as required per the

District Well Ordinance". If there are two wells on the property (as stated on page 133), the text on page 136 should be updated to reflect both wells.

Response C.5: As stated in Response C.2, Page 133 has been updated to correctly state that there is one existing well on-site, the reference to two wells was a typo. Refer to Section 5.0 Draft EIR Text Revisions of this Final EIR.

Comment C.6: **6. Section 4.10.2.2 – Hydrology and Water Quality, Project Impacts, Impact HYD-3 (Page 137):** While the project site is not a managed aquifer recharge facility, as correctly stated on page 136, the 33 acres of pervious surfaces currently allow for natural recharge. Both natural recharge and managed recharge support sustainable groundwater conditions in the Santa Clara and Llagas Subbasins. Page 137 explains that the 33 acres of "nearly entirely pervious" surfaces will be converted by the proposed development to about 75% impervious and 25% pervious surfaces. Valley Water recommends additional text is provided in the EIR to explain if, and how the reduction in pervious surfaces will affect natural recharge to the aquifer. Given the differences in the stormwater management plans for Option 1 versus Option 2, please also add text explaining if one of the options is preferable in terms of maintaining current natural recharge at the site.

Response C.6: As mentioned in Section 3.2 Project Description, Page 5 and under the Impact HYD-3 discussion, Page 137 of the Draft EIR, most of the site is undeveloped with fallowed agricultural fields. Some of the rainfall at the existing site percolates into the groundwater aquifer, however, most of it is not recharged but is lost due to evapotranspiration. Under Option 1, the reduction of pervious surfaces would reduce natural recharge as more impervious surfaces would increase the amount of runoff from the site, resulting in less rainfall percolation into the groundwater aquifer. However, this additional runoff would be directed to bioretention areas and underground retention facilities on-site to reduce runoff from leaving the site and enhance on-site percolation. Stormwater runoff from the site would be retained and then directed to the Madrone Channel, a recharge facility managed by Valley Water. Under Option 2, stormwater would be directed to subsurface infiltration facilities (sized to retain the 100-year storm event), resulting in the percolation of more stormwater into the groundwater aquifer, which would result in more on-site recharge to the aquifer compared to Option 1. Page 136 of the Draft EIR has been revised to include this clarification.

Comment C.7: **7. Section 4.10.2.2 – Hydrology and Water Quality, Project Impacts, Impact HYD-3 (Page 137):** The EIR states that the project would not "substantially increase the rate or amount of surface runoff in a manner which would result in flooding on-or off-site" and "create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage system..." The basis of this determination should be supported by a detailed analysis which compares pre- versus post-development conditions and provides justification for the design of the proposed retention basins. Furthermore, the EIR proposes two options to manage stormwater runoff. According to Section 3.2.4 of the EIR - 'Storm Drainage Improvements,' Option 1 would be designed to detain runoff from the 25-year, 24-hour storm event, and "Excess runoff from the site

would drain to the Santa Clara Valley Water District's (Valley Water's) Madrone Channel (Page 19)." The EIR should include a more detailed discussion of the potential impacts from Project Option 1 and determine the anticipated runoff (both volume and rate) if Option 1 is subjected to the 100-year, 24-hour storm event. The City has been working with Akel Engineering on a hydrology report detailing the Madrone Channel drainage basin and the allowable runoff contributions into Madrone Channel. Moreover, this study concluded that all developments north of Half Road should be restricted to a total of flow rate of 120 cfs; this equates to 0.42 cfs/acre. If Option 1 is the chosen alternative, the EIR should acknowledge this restriction and design the mitigation measures accordingly.

Response C.7: Under Project Option 1, based on a stormwater memo completed by Akel Engineering in December 2022, stormwater runoff for proposed developments north of Half Road would be allotted 120 cubic feet per second (cfs) at a rate of 0.42 cfs/acre.[1] Stormwater runoff that would be generated by the proposed Crosswinds project during the 100-year storm event would not exceed 13.4 cfs, which equates to 0.42 cfs/acre.[2]. Stormwater runoff from future developments north of Half Road (including the Crosswinds development) would not exceed 118.7 cfs during a 100-year event (which equates to 0.42 cfs/acre)[3] Therefore, the project and cumulative projects north of Half Road, would not exceed the runoff capacity for the Madrone Channel. Page 137 of the Draft EIR, which includes a discussion of drainage impacts, has been updated with the above information. Refer to Section 5.0 Draft EIR Text Revisions of this Final EIR. Given the project's runoff under Option 1 would not cause the Madrone Channel to exceed capacity under even a 100-year, 24-hour event, no mitigation measures are required to reduce drainage impacts.

Comment C.8: **8. Section 4.10.2.2 – Hydrology and Water Quality, Cumulative Impacts, Impact HYD-C (Page 138):** The text states that "the project would not impact groundwater recharge and would not conflict with the SCVWD's 2016 Groundwater Management Plan." Valley Water recommends updating this text to reflect Valley Water's 2021 Groundwater Management Plan. Valley Water also recommends revising this text as needed in response to Valley Water's previous comments about natural recharge and stormwater into Madrone Channel (recharge facility).

Response C.8: The reference to Valley Water's 2016 Groundwater Management Plan has been updated to the 2021 Groundwater Management Plan under Impact HYD-5, Page 138 of the Draft EIR. The discussion has been updated to clarify that stormwater would be treated on-site prior to being directed to the Madrone Channel (a managed recharged facility). Stormwater from the site would be retained via bioretention basins/facilities to reduce runoff from leaving the site and enhance

[1] Akel Engineering Group. Proposed New 42" Storm Drain Outfall at Half Road. December 2022.
[2] 0.42 cfs/acre x 33 acre project site = 13.4 cfs
[3] 0.42 cfs/acre x 283 acres (pending and approved projects in the area) = 118.7 cfs

on-site percolation, under Options 1 and 2 (Option 2 contains subsurface infiltration facilities sized to retain the 100-year storm event, resulting in more on-site recharge). Cumulative developments would be subject to similar requirements for bioretention basins that would result in on-site recharge, which would reduce impacts to the Madrone Channel recharge facility. Page 138 of the Draft EIR has been updated with this clarification. Refer to Section 5.0 Draft EIR Text Revisions of this Final EIR.

Comment C.9: **9. Section 4.10.2.2 – Hydrology and Water Quality, Cumulative Impacts, Impact HYD-C (Page 138):** The EIR states that the proposed development, from a cumulative standpoint, would not have a significant impact to the existing hydrology. A hydrologic analysis of the Madrone Channel drainage basin should be included with the EIR to support this finding. The analysis should assess the anticipated runoff (volume and rate) generated under post-development conditions, and account for contributions from other planned developments within the Madrone Channel drainage basin. Moreover, the analysis should demonstrate that Madrone Channel has adequate capacity (including freeboard) to receive and convey the cumulative runoff without inducing flooding downstream of the development. As noted, in Comment #3, the EIR should acknowledge the allotted runoff quantity for all developments north of Half Road, as determined in the study by Akel Engineering, which is roughly 120 CFS, or 0.4 CFS/acre. Moreover, the mitigation measure proposed under Option 1 should consider this restriction when determining the runoff generated cumulatively with other proposed developments in the Madrone Channel drainage basin.

Response C.9: As stated in Response C.7, stormwater runoff from future developments north of Half Road (including the Crosswinds development) would not exceed 109 cfs during a 100-year event,[4] which would not exceed the capacity (120 cfs) for runoff at the Madrone Channel under Option 1. Stormwater runoff from the site would be filtered through the bioretention areas and underground retention facilities before being discharged into the public storm drain system to Madrone Channel. Stormwater runoff from the project site would not result in a significant cumulative impact to the Madrone Channel basin (see Section 5.0 Draft EIR Text Revisions of this Final EIR).

Comment C.10: **10. Section 4.19.1.2 – Utilities and Service Systems, Project Impacts, Existing Conditions, Water Service (Page 214):** The DEIR states on page 214 "One or two private wells supply water to the residence and tree nursery." Please ensure this sentence and all the previously mentioned sentences about the number of existing wells on this property are consistent. Some statements say one well and others say two wells.

Response C.10: As stated in Responses C.2 and C.5, there is one existing well on the site, associated with the vacant residence, and the reference to two wells is a typo.

[4] Akel Engineering Group. Proposed New 42" Storm Drain Outfall at Half Road. December 2022.

There is an abandoned off-site well at the adjacent property to the west, which was historically used to supply water to the project site's tree nursey. The off-site well is no longer active. Page 214 and Appendix H Water Supply Assessment of the Draft EIR have been updated to state this. Refer to Section 5.0 Draft EIR Text Revisions.

Comment C.11: 11. Section 4.19.1.2 – Utilities and Service Systems, Project Impacts, Existing Conditions, Water Service (Page 214): The DEIR states that current groundwater use on-site is 18.54 acre-feet per year (AFY). However, based on Valley Water well production records, there is only one well (09S03E16J005) on the Project APNs with a reported production history that is typically <1 AFY. Given that information, the estimated groundwater use of 18.54 AFY greatly over-estimates actual reported groundwater use. In turn, this greatly over-estimates the statement on page 219 about increased groundwater demands "…the project would result in a net increase in groundwater demands of about 23.77 AFY." If actual groundwater use was closer to 1 AFY, then the net increase in groundwater demands due to the Project would be closer to the gross water demands of about 42 AFY. Valley Water recommends reevaluating the water supply assessment regarding actual, historical groundwater use on-site.

Response C.11: As stated in Response C.10, there is one existing well on the site the site, associated with the vacant residence. There is an abandoned off-site well at the adjacent property to the west, which was historically used to supply water to the project's tree nursey. The off-site well is no longer active. At the time the project's Water Supply Assessment was prepared (in 2020 and 2021), the off-site agricultural well was still active. Since this time, the off-site well has been destroyed. Page 214 of the Draft EIR has been updated to state that the off-site agricultural well is abandoned and no longer serves the site. Pages 219 and 220 and Appendix H Water Supply Assessment of the Draft EIR have been revised to include the updated net demand increase from 23.77 AFY to 41.67 AFY. Given the project is consistent with the General Plan assumptions, the project's water demand is consistent with the Urban Water Management Plan and would not exceed projections for the site. Therefore, the project would continue to have a less than significant impact related to the project's water demand as stated on Page 220 of the Draft EIR. See Section 5.0 Draft EIR Text Revisions of this Final EIR.

Comment C.12: 12. Section 4.19.1.2 – Utilities and Service Systems, Project Impacts, Existing Conditions, Storm Drainage (Page 215): The DEIR correctly states "The Madrone Channel (managed by Valley Water) is located approximately 1,000 feet west of the site. The Madrone Channel carries stormwater runoff from the area and also functions as a groundwater recharge basin." Please use this or similar text to address our comment on page 133 about Madrone Channel.

Response C.12: As recommended in Comment C.12, Page 133 of the Draft EIR has been updated to state that Madrone Channel is managed by Valley Water which functions as a groundwater recharge basin. See Section 5.0 Draft EIR Text Revisions of this Final EIR.

Comment C.13: **13.Section 4.19.2.1 – Utilities and Service Systems, Project Impacts, Text Related to Table 4.19-2 (Page 219):** The DEIR states "As shown in Table 4.19-2, the proposed project would result in a gross water demand of 42.31 acre-feet per year (AFY)…". However, the table 4.19-2 states that 42.31 AFY is an average between Water Demand based on WSMP net area and the Water Demand based on units of building area. Therefore, Valley Water recommends adding the word "average" to the sentence to more accurately reflect the information presented in the table: "As shown in Table 4.19-2, the proposed project would result in an average gross water demand of 42.31 acre-feet per year (AFY)…"

Response C.13: As recommended in Comment C.13, Draft EIR Page 219 has been to state updated to state that the proposed project would result in an average gross water demand of 42.31 acre-feet per year (AFY). See Section 5.0 Draft EIR Text Revisions of this Final EIR.

Comment C.14: **14 Utilities and Service Systems, Project Impacts, UTL-2, Water Supply Reliability (Page 220):** The analysis of water supply concludes that the project is consistent with the City's 2016 (and presumably 2020) Urban Water Management Plan (UWMP). The UWMPs for Morgan Hill and for Valley Water both assume substantial increases in water conservation to manage future water demands. To meet water conservation targets assumed in the UWMPs, Valley Water suggest that all available water conservation measures be required of the project, including requiring all multi-family residential units to install a submeter to encourage efficient water use. Studies have shown that adding submeters can reduce water use 15 to 30 percent.

Response C.14: As recommended in Comment C.14, all feasible water conservation measures would be implemented by the proposed project including the installation of individual water meters in all single-family residential and duet units. In addition, a water submeter would be installed in the condominium buildings to manage the water use of the condominium units. Page 219 and 220 of the Draft EIR have been updated with these clarifications (refer to Section 5.0 Draft EIR Text Revisions of this Final EIR).

Comment C.15: **15. Section 4.19.2.1 – Utilities and Service Systems, Project Impacts, UTL-2 (Page 220):** The DEIR correctly states, "The City's sole source of water supply, groundwater from the Llagas and Santa Clara subbasins, is a shared resource managed by Valley Water through the Sustainable Groundwater Management Act (SGMA) process" and references the 2018 SGMA Water Year regarding a balanced long-term groundwater budget.

Since the 2018 water year report is about five years old, Valley Water recommends adding the following text to this paragraph to provide the most current information on Valley Water's groundwater management under SGMA:

"Valley Water's 2016 Groundwater Management Plan (GWMP) for the Santa Clara and Llagas Subbasins describes groundwater sustainability goals, and the strategies, programs, and activities that support such goals. In 2019, the Department of Water Resources (DWR) approved the 2016

GWMP for both basins, determining it satisfies the objectives of SGMA. In 2021, Valley Water submitted to DWR the first required periodic update of the GWMP that describes updated groundwater management outcome measures, programs, and activities."

The 2021 GWMP is publicly available here on this webpage: https://www.valleywater.org/your-water/where-your-water-comes/groundwater/sustainable" The 2021 GWMP should also be referenced in the discussion on Impact HYD-5 on page 138.

Response C.15: As recommended in Comment C.15, Page 138 of the Draft EIR has been updated to reference the Valley Water 2021 Groundwater Management Plan. The recommended text update regarding the Groundwater Management Plan update has also been added to Page 220 of the Draft EIR text. See Section 5.0 Draft EIR Text Revisions of this Final EIR.

Comment C.16: **16. General:** The proposed sanitary sewer modifications along Half Road will require an encroachment permit for any modifications that will cross, or take place over the pipeline, and/or impact any appurtenances for the pipeline. It should be noted that Valley Water is a Responsible Agency under CEQA due its discretionary approval authority over Half Road pipeline and its appurtenances.

Response C.16: As noted in Comment C.16, Valley Water is a Responsible Agency for the project, and the project would require the obtainment of an encroachment permit for the proposed sanitary sewer modifications. Page 23 of the Draft EIR has been updated with a clarification that an encroachment permit from Valley Water will be required for the sanitary sewer modifications. Refer to Section 5.0 Draft EIR Text Revisions of this Final EIR.

D. Joe Baranowski (January 3, 2023)

Comment D.1: The DEIR correctly emphasizes that project impacts must be considered on a cumulative basis.

(pg. 25) The CEQA Guidelines advise that a discussion of cumulative impacts should reflect both their severity and the likelihood of their occurrence (CEQA Guidelines Section 15130(b)). To accomplish these two objectives, the analysis should include either a list of past, present, and probable future projects or a summary of projections from an adopted general plan or similar document (CEQA Guidelines Section 15130(b)(1)). This EIR uses the list of projects approach.

The analysis must determine whether the project's contribution to any cumulatively significant impact is cumulatively considerable, as defined by CEQA Guideline Section 15065(a)(3). The cumulative impacts discussion for each environmental issue accordingly addresses the following issues: 1) would the effects of all of past, present, and probable future (pending) development result in a significant cumulative impact on the resource in question; and, if that cumulative impact is likely to be significant, 2) would the contribution from the proposed project to that significant cumulative impact be cumulatively considerable?

> **Response D.1:** Comment D.1 summarizes the description and approach to evaluating cumulative impacts discussed on Page 25 of the Draft EIR. The comment does not question the adequacy of the Draft EIR analysis. Therefore, no further response is required.

Comment D.2: Comment 1: Cumulative Toxic Air Contaminants are underestimated because 'cumulative' pending projects are not accounted for at all or are incorrectly modeled.

Page 65 of the DEIR, Table 4.3-10 shows that effects of TAC Sources (e.g., cancer risk) to Project Site Receptors is based on Average Daily Trips on Mission View Drive of 14,020.

Appendix B of the DEIR states that: The average daily traffic (ADT) for Mission View Drive were based on AM and PM peak-hour cumulative plus project traffic volumes for the nearby roadways provided by the project's traffic consultant. The calculated ADT on Mission View Drive was 14,020 vehicles.

The only reference to the assumed Mission View Drive ADT value was "Correspondence with Maria Kisyova, Assistant Project Manager, David J. Powers & Associates, Inc., November 10, 2020, Hexagon - The Crosswinds Trip Gen and Volumes 11-10-20."

However, the DEIR states that:

The only other known TAC source within 1,000 feet that would affect residents of the proposed project are operational truck trips that would be associated with the approved Redwood Tech project immediately west of the site. At this time, the number of operational truck trips, truck routes, or associated emissions with the pending Redwood Tech project are unknown. However, based on modeling completed for a former industrial project proposed on that site in 2019 approximately two times larger than the current Redwood Tech project, the combined effect of emissions of truck operations from the pending Redwood Tech project and vehicle emissions from Mission View Drive would not likely result in a substantial cumulative effect from TAC sources (i.e., would not likely exceed cumulative BAAQMD thresholds) on sensitive receptors at the site. If the Redwood Tech project undergoes construction after the proposed project (under Options 1 and 2) starts operations (and residents are on-site), the cumulative effect of construction and operations of the Redwood Tech project may result in substantial cancer risks without the implementation of conditions of approval for construction emissions.

The assumption regarding TAC sources in the above paragraph are wrong for a number of reasons.

Response D.2: It should be clarified this excerpt from Draft EIR Page 65 is a discussion of TAC effects on future project residents, which is not considered a CEQA impact (refer to *California Building Industry Association v. Bay Area Air Quality Management District*, 62 Cal. 4th 369 (BIA v. BAAQMD)which concluded that effects of the environment on the project are not considered CEQA impacts). The Draft EIR properly analyzes the project's TAC impacts on the environment, including the potential to exacerbate existing conditions. To address the reverse situation, i.e., future project resident exposure to TACs, conditions of approval are recommended for the project for General Plan consistency to address impacts on the future residents. The 14,020 average daily trips (ADT) for Mission View Drive referenced in Appendix B Air Quality and Greenhouse Gas Assessment of the Draft EIR refers to the ADT from the project and cumulative volumes.[5] The average daily trips on Mission View Drive from cumulative plus project traffic volumes are derived from buildout of the General Plan. The cumulative traffic volumes on Mission View Drive reflect Year 2030 cumulative conditions, which are based on General Plan buildout projections, and reflect far greater traffic growth than traffic from only the Redwood Tech, Crosswinds, and Cochrane Commons Phase II projects combined. . The Draft EIR, therefore, provides a conservative analysis for TAC impacts (including vehicle emissions from Mission View Drive) on nearby sensitive receptors. As discussed on Pages 62 and 63 of the Draft EIR, both the proposed project and Redwood Tech

[5] The cumulative average daily trips on Mission View Drive are based on average of the AM and PM peak hour cumulative plus project volumes multiplied by 10. The peak hour volumes are assumed to be 10 percent of ADT; this is an observed and generally accepted standard factor based on various traffic data.
Personal Communications. Del Rio, Robert, Hexagon Transportation Consultants. April 17, 2023.

project would be required to implement construction best management practices that identify construction equipment necessary to reduce impacts on sensitive receptors to less than significant levels.

<u>Comment D.3:</u> A) The modeling done for the "former industrial project approximately two times larger than the current Redwood Tech project" is not consistent with ITE standards or known information.

An expert with qualifications that include registration as a Civil and Traffic Engineer in California, over 50 years professional consulting practice in these fields and both preparation and review of the traffic and transportation components of numerous environmental documents prepared under CEQA, reviewed the Redwood@101 Project and wrote a report dated May 20, 2021, which the City received and is aware of.

In that report, the author noted that the Redwood@101 project is "best described as a Business Park". That Land Use best matches the developer's documentation and statements to the Morgan Hill Planning Commission and City Council where the exact designation of "Business Park" was indeed spoken. The expert stated that the Redwood@101 land use, as stated BY THE DEVELOPER, corresponds to the description for Land Use Category 770, Business Park in the Institute of Transportation Engineers (ITE) Trip Generation, 10th Edition.

Based on the Redwood@101 building area the ITE Trip Generation manual indicates that approximately 6040 Average Daily Trips (ADTs) would be generated by the Redwood@101 project. This is higher than the number of ADT that were assumed for the 'twice as large" project.

Regarding the number of Truck Trips, the "twice as large" study assumed that "each truck service door would turn over once per day on average". That assumption is not consistent with modern operations or with ITE studies on buildings with a high number of dock doors.

<u>Response D.3:</u> The referenced May 20, 2021 memorandum was prepared by a third party regarding the Redwood Tech project. The letter attempted to justify why ITE Land Use Category 770 should be used for the Redwood Tech project, and claimed the Redwood Tech project was not subjected to a complete traffic analysis. This letter was withdrawn and no changes were made regarding approval of the Redwood Tech project. This comment pertains to future conditions that could affect future project residents based on the amount of traffic that would be generated by an adjacent industrial project, does not address an impact of the Crosswinds Residential project on the environment, and, according to the case law cited in the prior response, is outside the requirements of CEQA. As noted above, the exposure of future project residents to TACs source was included in the Draft EIR for informational purposes.

Based on the ITE Trip Generation Manual Land Use Category 770 Business Park description, this category may include offices, retail, and wholesale stores,

restaurants, recreational areas and warehousing, manufacturing, light industrial, or scientific research functions. The previous Trammel Crow industrial and Redwood Tech buildings were assumed to be tilt-up warehouse buildings with limited supporting office space and large truck dock doors. Thus, the buildings would not allow for customer-based uses such as office, retail, wholesale stores, restaurants, and recreational areas upon which the LU 770 Business Park ITE trip rates are based, which are higher than the LU 110 Light Industrial category trip rates.

The ITE Land Use Category 110 Light Industrial, which is described as uses that typically have minimal office space and include industrial activities such as material testing and assembly would be applicable to the previous industrial project and Redwood Tech project. Furthermore, trip rates for other potentially applicable land use categories such as "Industrial Park (LU 130) and Manufacturing (LU 140) are lower than those for Light Industrial (LU 110). The cumulative traffic analysis is based on the Cumulative Year 2030 condition peak-hour traffic volumes which reflects a proportion (15 Years or 75 percent) of traffic growth associated with the buildout of the City's General Plan (refer to Appendix G of the Draft EIR), also refer to Response D.8 for further detail). As noted above, this comment and the underlying issue of the traffic produced by a prior proposal for an adjacent site is outside the requirements of CEQA given it pertains to the effects of the environment on future project residents.

<u>Comment D.4:</u> B) The Average Daily Trips that the approved Cochrane Commons Phase 2 project will generate on Mission View Drive are not accounted for at all.

The DEIR incorrectly states that Table 3.4-1 identifies the approved (but not yet constructed or occupied) and pending projects within one mile of the project site that are evaluated in the cumulative analysis. Other pending projects in the City are located at least two miles away from the project site.

The "Cochrane Commons Mixed-Use Development Transportation Operations Analysis, December 10, 2021" shows that the approved project that is less than two miles away for the Crosswinds project site is estimated to generate 9,857 Average Daily Trips, many of which will result in travel along Mission View Drive.

As the DEIR states: *The substantial exposure to TACs for new project receptors is evaluated via the following criteria: (1) increased cancer risk, and (2) annual $PM_{2.5}$ concentration. Exposure to annual $PM_{2.5}$ concentrations from Mission View Drive traffic is above the BAAQMD single-source threshold of 0.3 µg/m^3. Cancer risk mostly results from exposure to diesel particulate matter, although gasoline vehicle exhaust contributes to this effect. Annual $PM_{2.5}$ concentrations are based on the exposure to $PM_{2.5}$ resulting from emissions attributable to truck and automobile exhaust, the wearing of brakes and tires, and roadway dust from vehicles traveling over pavement. Reducing particulate matter exposure would reduce both annual $PM_{2.5}$ exposures and cancer risk.*

The exposure to TACs for the Crosswinds project has used a false assumption for the number of CUMULATIVE Average Daily Trips that will be occurring on Mission View Drive and thus the results do not reflect the cumulative exposure or associated risk.

Response D.4: This comment pertains to future conditions that could affect future project residents based on the amount of traffic that would be generated by development in the area, does not address an impact of the Crosswinds Residential project on the environment, and, according to the case law cited in Response D.2, is outside the requirements of CEQA. As noted above, the exposure of future project residents to TACs source was included in the Draft EIR for informational purposes. Several conditions of approval were placed on the project to comply with requirements of the General Plan to ensure future resident exposure to TACs was consistent with BAAQMD guidelines. The average daily trips on Mission View Drive were derived from cumulative plus project traffic volumes from buildout of the General Plan. The cumulative traffic volumes in Appendix G Transportation Analysis in the Draft EIR reflect Year 2030 cumulative conditions, which are based on General Plan buildout projections, and reflect far greater traffic growth than traffic from only the Redwood Tech, Crosswinds, and Cochrane Commons Phase II projects combined. The Draft EIR, therefore, provides a conservative analysis for TAC impacts (including vehicle emissions from Mission View Drive) on future project residents.

Comment D.5: Comment 2: The traffic operations analysis done for the Crosswinds project is completely meaningless because 'cumulative' pending projects are not accounted for at all. This IS a matter of CEQA and thus of the DEIR review because CEQA guidelines require that consistency to a General Plan must be considered.

Appendix G of the DEIR states: *The traffic operations analysis provides supplemental analysis for use by the City of Morgan Hill in identifying potential improvement of the transportation system that may be included as part of the project's Conditions of Approval. However, the identified roadway operations and improvements are not required or considered project impacts per CEQA guidelines.*

First of all we should be clear that California Public Resources Code, Section 21099 (b)(4) states that the updated VMT *subdivision does not preclude the application of local general plan policies, zoning codes, conditions of approval, thresholds, or any other planning requirements pursuant to the police power or any other authority.*

Response D.5: Comment D.5 suggests that roadway operations and improvements outside of an evaluation of Vehicle Miles Traveled (VMT) were not considered in the Transportation Analysis for the proposed project. However, consistent with City requirements, a Traffic Operations Analysis, which includes the evaluation of intersection level of service, was completed as part of the Transportation Analysis (see Appendix G of the Draft EIR). Page 14 of the Transportation Analysis states that the Traffic Operations Analysis provides supplemental analysis, beyond the VMT analysis required by CEQA, for use by the City of Morgan Hill in identifying potential

improvement of the transportation system that may be included as part of the project's Conditions of Approval to demonstrate the project's consistency with the Morgan Hill 2035 General Plan goals and policies. The comment further argues that pending projects were improperly omitted from the cumulative analysis. However, the Transportation Analysis in Appendix G of the Draft EIR included trips from planned growth projected to be built out by 2030 (Year 2030 Cumulative Conditions), which includes Cochrane Commons, rather than employing a cumulative scenario derived from a list of pending and approved projects, which can serve to understate future growth. The Year 2030 condition peak-hour traffic volumes reflect a proportion (15 Years or 75 percent) of traffic growth associated with the buildout of the City's General Plan, which is a more conservative approach to evaluating future cumulative conditions in this case than relying on a list of pending and approved projects. Section 15130(b)(1) of the CEQA Guidelines allows for either approach, i.e., using the list approach or growth projections based on General Plan buildout.

Comment D.6: CEQA guidelines require that a lead agency conducting environmental review of a project must consider whether the project would conflict with any applicable land use plan, policy or regulation including the General Plan.

Response D.6: This comment correctly summarizes aspects of the CEQA Guidelines. As discussed in Section 4.11 Land Use and Planning, Page 141, the proposed project is consistent with the site's General Plan designation of Residential Attached Low-Density, and where relevant, the project's consistency with various General Plan Policies was discussed throughout the Draft EIR's analysis.

Comment D.7: The Morgan Hill General Plan requires a traffic impact study be done when a project generates 100 or more net new peak hour trips. The Crosswinds project exceeds the Trip Generation Threshold by a wide margin.

The Morgan Hill Transportation Impact Study Policy states that at a minimum the following shall be included in a transportation study.

1) The study shall acknowledge and identify the use of other traffic reports completed for other projects within the same area.
2) Existing Project Conditions: Background traffic volumes, existing volumes plus the volumes from approved but not yet constructed or occupied development in the area plus traffic from the proposed project.

3) Cumulative No Project Conditions and Cumulative Plus Project Conditions – from approved projects plus traffic from pending projects.

Response D.7: Comment D.7 references portions of the City of Morgan Hill Guidelines for the Preparation of Transportation Impact Reports dated May 28,

2008 (last amended February 24, 2010). A comprehensive transportation analysis which included a Vehicles Mile Traveled (VMT) evaluation in conformance with CEQA requirements and a supplemental transportation operations analysis (including a level of service (LOS) analysis pursuant to General Plan policy) was completed for the proposed project. An LOS analysis of existing conditions, existing plus project conditions, cumulative no project conditions (Year 2030), and cumulative plus project conditions was completed as a part of the Transportation Analysis. It is important to note that LOS provided for in the City's guidelines is no longer consistent with current state regulations for the evaluation of transportation impacts per CEQA (the Senate Bill (SB)743 and revised CEQA guidelines now require public agencies to base the determination of transportation impacts on vehicle miles traveled, rather than traffic delay and congestion). Instead, the City's 2008 transportation guidelines are used as a guide in the preparation of transportation analyses for development projects within the City to study the capacity of the roadway network to handle additional traffic, and what conditions to require of projects. Several conditions of approval are included to address the traffic issues raised by the analysis. This comment pertains to the methodology for evaluation of traffic congestion, and is not relevant to the Draft EIR's analysis.

Comment D.8: Instead the City and their consultants have willfully and knowingly chosen to simply ignore the projected impacts from VERY large projects already approved in the immediate vicinity of Crosswinds. NONE of the results in the Crosswinds traffic operations analysis are relevant. The number of new Average Daily Trips in the immediate area from projects that have been recently approved (plus Crosswinds) but not yet developed is approximately 18,500 and yet not a single analysis of any type has considered the cumulative traffic impact. This is absurd, irresponsible and a gross failure to follow the City's General Plan and a failure to give any consideration whatsoever to the health, safety, and welfare of Morgan Hill residents living in the area.

Response D.8: The referenced daily trips are not utilized in the traffic operations analysis. Rather, the operations analysis is based on weekday peak hour volumes during the morning and evening commute periods. Furthermore, the referenced 18,500 daily trips is an inaccurate estimation of daily trips associated with the referenced developments in the project area. When considering the Cochrane Commons (approximately 8,200 daily trips), Redwood Tech (approximately 3,500 daily trips), and this proposed project (approximately 2,500 daily trips), a total of approximately 14,200 daily trips may be generated by these three specific projects. In referencing the daily trips, the comment incorrectly presumes that the cumulative analysis completed for the proposed project did not consider the referenced approved projects. The comment also incorrectly suggests that all daily trips generated by the above developments would be added to Mission View Drive and Cochrane Road.

However, when considering the peak hour trip volumes for the above three projects, based on the individual project traffic operations studies, a total of

approximately 330 AM and 590 PM peak hour trips were estimated to travel through the Mission View Drive and Cochrane Road intersection. The comment suggests that the traffic associated with these individual projects must be considered in the cumulative analysis. The cumulative analysis, as discussed in Appendix G Transportation Analysis in the Draft EIR, reflects Year 2030 cumulative conditions, which accounts for growth beyond what would be considered if only the above three projects were evaluated. As stated in Response D.4, the Cumulative Year 2030 condition peak-hour traffic volumes reflect a proportion (15 Years or 75 percent) of traffic growth associated with the buildout of the City's General Plan. The Cumulative Year 2030 peak hour volumes at the Cochrane Road and Mission View Drive intersection reflect an additional 1,425 AM and 1,547 PM peak hour trips traveling through the Mission View Drive and Cochrane Road intersection when compared to existing traffic volumes. Thus, the peak hour volumes used in the Year 2030 cumulative analysis reflect peak hour traffic growth that is more than three times greater than that which would be accounted for if only considering the two other approved projects referenced in the comment. Therefore, the use of projected Year 2035 General Plan volumes to develop the Year 2030 cumulative volumes provides for a conservative estimate and evaluation of the effects of a greater amount of traffic volume on the roadway system. Also, the use of the General Plan traffic growth projections provides an evaluation of roadway operations that is consistent with the City's General Plan and a consistent basis in which all development projects can be compared.

Section 5.0 Draft EIR Text Revisions

This section contains revisions to the text of the Crosswinds Residential Project Draft EIR dated November 2022. Revised or new language is underlined. All deletions are shown with a ~~line through the text~~.

Page 22 **Section 3.2.6, Green Building Measures; the text will be REVISED as follows:**

The project would include the following green building measures, in compliance with the California Green Building Standards Code:

- Solar-ready area for PV solar panels on the roof
- Low volatile organic compound (VOC) emission interior wall and ceiling paints
- Insulation with 30 percent post-consumer recycled content for walls and floors
- Energy Star ~~General Electric (GE)~~ appliances.
- High efficiency heating, ventilation, and air conditioning (HVAC) units.
- Drought-tolerant landscaping and low flow irrigation system.
- Bicycle storage for residents.
- Electric vehicle (EV) charging stations.

Page 23 **Section 3.4, Uses of the EIR; the text will be ADDED as follows:**

3.4 USES OF THE EIR

This EIR would provide decision-makers in the City of Morgan Hill, other public agencies, and the general public with relevant environmental information to use in considering the project. If the proposed project is approved, the EIR could be used by the City in conjunction with appropriate discretionary approvals including, but not limited to, the following:

- Vesting Tentative Map
- Design Permit
- Issuance of Demolition, Grading, Building, and Occupancy Permits
- Tree Removal Permits
- Encroachment Permit from Valley Water (sanitary sewer modifications)

Page 25 **Section 4.0, Environmental Setting, Impacts, and Mitigation; the text in the second paragraph will be ADDED as follows:**

The CEQA Guidelines advise that a discussion of cumulative impacts should reflect both their severity and the likelihood of their occurrence (CEQA Guidelines Section 15130(b)). To accomplish these two objectives, the analysis should include either a list of past, present, and probable future projects or a summary of projections from an adopted general plan or similar document (CEQA

Guidelines Section 15130(b)(1)). This EIR uses both the list of projects approach and summary of projections approach, based on the particular topic.

Page 25 **Section 4.0, Environmental Setting, Impacts, and Mitigation; the text in Table 3.4-1 will be ADDED as follows:**

Table 3.4-1 below identifies the approved (but not yet constructed or occupied) and pending projects within one mile of the project site that are evaluated in the cumulative analysis. Other pending projects in the City are located at least two miles away from the project site.

Table 3.4-1: Cumulative Projects List

Name and Location	Description	Distance to Proposed Project
Redwood Tech at 101, west of DePaul Road, south of Cochrane Road, east of U.S. 101, and north of Half Road	Construction of five industrial buildings totaling approximately 500,000 square feet	Less than 50 feet west of the site
Cochrane Commons Phase II Project	Construction of 498 residential units, consisting of a mix of townhomes and apartments, 135,000 square feet of retail space, a 140-room hotel	0.3 mile north of the site
Borello Subdivision Peet Road	Construction of 244 residential units. The project is processing the final phase of the development which includes 114 lots.	0.5 mile north of the site
Santa Clara Valley Water District 18300 Peet Road	21,625 square foot industrial warehouse (under construction)	0.5 mile north of the site
Condit-Cardinale Automotive, 17085 Condit Road	Construction a 36,665 square foot commercial car dealership (pending)	0.8 mile southwest of the site
Condit Road, 650 feet south of Diana Avenue	Construction of a 32,795 square foot commercial car dealership (approved)	0.9 mile south of the site

Page 53 **Section 4.3.2, Impact Discussion: Text in Table 4.3-4 has been revised as follows:**

Table 4.3-1: Summary of Residential and De Paul Drive Extension Phasing				
Project Land Uses	**Size**	**Units**	**Square Feet**	**Acreage**
Phase 1 (Whole Site Preparation/Grading), 2023				
Single Family Housing	269	Dwelling Units	512,363	30.5
Phase 2 (40 condominium units, 32 single-family attached units, and 22 ~~34~~ single-family detached units), 2023-2024				
Single Family Housing	54	Dwelling Units	39,600	12.2
Condo/Townhouse	40	Dwelling Units	40,000	
Recreational Swimming Pool	3	1,000 square feet	3,000	
Other Asphalt Surface	1.2	Acre	52,272	
Phase 3 (32 single-family attached units, 34 single-family detached units, ~~66 single-family detached units~~ and 45 condominium units), 2024-2026				
Single Family Housing	66	Dwelling Units	118,000	12.9
Condo/Townhouse	45	Dwelling Units	45,000	
Other Asphalt Surface	1.3	Acre	56,528	
DePaul Extension, 2024-2025				
Other Asphalt Surface	1.4	Acre	60,984	1.4
Phase 4 (64 condominium units), 2026-2027				
Condo/Townhouse	64	Dwelling Units	64,000	2.9
Other Asphalt Surface	0.5	Acre	21,780	

Page 66 **Section 4.3.3, Non-CEQA Effects; the condition of approval text will be REVISED as follows:**

Condition of Approval: The project shall include the following conditions prior to building occupancy to reduce long-term increased cancer risk and annual $PM_{2.5}$ exposure for new project occupants:

1. Install air filtration in the project's residential units within 75 feet of Mission View Drive travel lanes. Air filtration devices shall be rated MERV13 or higher. To ensure adequate health protection to sensitive receptors (i.e., residents), this ventilation system, whether mechanical or passive, shall filter all fresh air that would be circulated into the dwelling units.

2. The ventilation system shall be designed to keep the building at positive pressure when doors and windows are closed to reduce the intrusion of unfiltered outside air into the building.

3. As part of implementing this measure, an ongoing maintenance plan,~~,~~ to be prepared by the Homeowners Association's (HOA's) heating, ventilation, and air conditioning (HVAC) contractor, for the buildings' HVAC air filtration system shall be required.

4. The HOA shall ensure the Covenants, Conditions and Restrictions and other property documents: (1) require cleaning, maintenance, and monitoring of the affected buildings for air flow leaks, and (2) include assurance that new owners or tenants are provided information on the ventilation system. The HOA's property managers/contractors will be responsible for maintaining the air filtration system at common buildings, such as the proposed clubhouse. The individual homeowners shall be responsible for maintaining the air filtration systems. The HOA shall provide information such as newsletters to encourage residents to comply with air filtration system maintenance requirements.

Page 124 **Section 4.9.2, Impact Discussion; MM HAZ-2.5 text will be REVISED as follows:**

MM HAZ-2.5: Prior to issuance of any grading permits, the project applicant shall excavate lead-impacted soils identified at sample location~~s SS-R-16A, SS-R-16D, and~~ SS-R-17B (near the single-family residence and barn structure) to a depth of at least 2.5 below the ground. The soil shall be properly disposed of in accordance with state and SCCDEH and California Code of Regulations, Title 8 waste disposal requirements. The SCCDEH (or equivalent oversight agency) may also approve leaving in-place some of the contaminated soil if the contaminated soil will be buried under hardscape and/or several feet of clean soil and not at risk of being encountered by future site users or nearby residents.

Pages 126-127 **Section 4.9.2, Impact Discussion; the text will be ADDED in MM HAZ-2.7 as follows:**

MM HAZ-2.7: Prior to issuance of a grading permit, the project applicant shall research well records from Valley Water and attempt to locate abandoned wells at the site. The project applicant or contractor shall contact Valley Water's Wells Hotline immediately to assist in the identification of abandoned/unregistered wells or structures and help determine the appropriate means of addressing them. If the wells are identified, or subsequently encountered during earthwork activities, the wells shall be properly destroyed in accordance with Valley Water Ordinance 90-1. If septic systems are encountered during earthwork activities, those systems shall be abandoned in accordance with SCCDEH requirements.

Page 133 **Section 4.9.1, Existing Setting; the text will be REVISED in the second paragraph as follows:**

Groundwater

The depth to groundwater at the project site is approximately 20 to 30 feet below ground surface.[6] The site does not contain aquifer recharge facilities, such as streams or ponds. There is one existing well ~~are two existing wells~~ on the property associated with the site's vacant residence ~~agricultural activities~~ that ~~have been occurring~~ has occurred on the property for decades. Given the residence is vacant~~With the cessation of agricultural activities~~, the well is ~~wells are~~ no longer in regular use.

Page 136 **Section 4.9.2, Impact Discussion; the text will be ADDED in the third and sixth paragraphs as follows:**

Under Option 1, the project would include underground retention facilities designed for a 25-year, 24-hour storm event. In addition, an on-site network of drainpipes would collect the runoff filtered through the bioretention areas and underground retention facilities, before being discharged into the public storm drain system to Madrone Channel. The Madrone Channel is used by Valley Water for managed aquifer recharge that supports groundwater sustainability in the Llagas Subbasin.

Under Option 2, the project would include underground retention facilities designed for a 100-year, 24-hour storm event. Stormwater runoff would be retained and treated on-site, with no discharge to the Madrone Channel.

With implementation of either stormwater retention option, the project would meet SWMP requirements. Conformance with the SWMP, as proposed by the project under both options, would reduce the potential for the project to result in post-construction water quality impacts. **(Less than Significant Impact)**

Impact HYD-2:	The project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin. **(Less than Significant Impact)**

The depth to groundwater is approximately 20 to 30 feet below ground surface based on a geotechnical investigation completed for the 58-acre property immediately west of DePaul Drive, deep enough such that ground disturbance during construction, expected at most to be 10 feet during utility trenching and up to 13 feet for off-site sewer installation (under Options 1 and 2), would not interfere with groundwater flow or expose any aquifers. The project site is not an aquifer

[6] Haley Aldrich. *Due-Diligence Level Geotechnical Investigation DePaul Technology Center*. January 21, 2019. Groundwater depth estimation was for the property immediately west of the site (adjacent to DePaul Drive).

recharge facility (i.e., streams or ponds); therefore, development of the project site (under Options 1 and 2) would not substantially interfere with aquifer recharge. Since groundwater would be treated prior to being discharged, Option 1 would not result in a significant impact to the quality of stormwater flowing into the Madrone Channel (managed by Valley Water) or quality of recharge to the aquifer.

Most of the site is undeveloped with fallowed agricultural fields. Some of the rainfall at the existing site percolates into the groundwater aquifer, however, most of it is not recharged but is lost due to evapotranspiration. Under Option 1, the reduction of pervious surfaces would reduce natural recharge as more impervious surfaces would increase the amount of runoff from the site, resulting in less rainfall percolation into the groundwater aquifer. However, this additional runoff would be directed to bioretention retention areas and underground retention facilities on-site to reduce runoff from leaving the site and enhance on-site percolation. Stormwater runoff from the site would be retained and then directed to the Madrone Channel, a recharge facility managed by Valley Water. Under Option 2, stormwater would be directed to subsurface infiltration facilities (sized to retain the 100-year storm event), resulting in the percolation of more stormwater into the groundwater aquifer, which would result in more on-site recharge to the aquifer compared to Option 1. However, neither option would substantially interfere with groundwater recharge.

In addition, t~~T~~he existing well on the 33-acre property would be properly removed under permit from the Santa Clara Valley Water District, as required per the District Well Ordinance. For the above reasons, the project would not substantially decrease groundwater supplies or interfere with groundwater recharge. **(Less than Significant Impact)**

Page 137 Section 4.10.2, Impact Discussion; the text will be ADDED after the third paragraph as follows:

Furthermore, on-site systems proposed under Option 1 would be constructed to detain a volume of water up to a 25-year storm event while releasing water at a rate reflective of the 10-year predevelopment flow. This design limits stormwater flows off-site to less than 10-year predevelopment flows. Alternatively, on-site systems proposed under Option 2 would be constructed to retain a volume of water up to a 100-year storm event.

Based on a stormwater drainage memo completed in December 2022 regarding the Madrone Channel stormwater runoff capacity (see Appendix B of this Final EIR), the Madrone Channel has the capacity for the site's runoff during the 100-year storm event. Stormwater runoff for proposed developments north of Half Road would be allotted 120 cubic feet per second (cfs) at a rate of 0.42 cfs/acre. Stormwater runoff that would be generated by the proposed Crosswinds project during the 100-year storm event would not exceed 13.4 cfs.

Page 138 Section 4.10.2, Impact Discussion; the text will be ADDED in the second paragraph as follows:

Impact HYD-5:	The project would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. **(No Impact)**

The project (under Options 1 and 2) would comply with the City's Stormwater Management Guidance Manual for Low Impact Development and Post-Construction Requirements. The project would not impact groundwater recharge and would not conflict with Valley Water's ~~the SCVWD's 2016~~ Groundwater Management Plan. For these reasons, the project would not conflict with implementation of a water quality or groundwater management plan. **(No Impact)**

Page 138 Section 4.10.2, Impact Discussion; the text will be ADDED in the third paragraph as follows:

Section 4.10.2.2 Cumulative Impacts

Impact HYD-C:	The project would not result in a cumulatively considerable contribution to a cumulatively significant hydrology and water quality impact. **(Less than Significant Cumulative Impact)**

The geographic area for cumulative hydrology and water quality impacts is the Madrone Channel storm water drainage basin. Cumulative developments near the project site would be subject to similar hydrological and urban runoff conditions. All cumulative projects occurring within Morgan Hill would be required to implement the same project conditions related to construction water quality as the proposed project (including preparation of a SWPPP if disturbance is greater than one acre), under Options 1 and 2. The site's stormwater facilities would be sized to allow infiltration of the 95th percentile, 24-hour rainfall event. In addition, the City standards require detention of the 25-year storm; under Option 1, stormwater would be directed to underground retention facilities designed for a 25-year, 24-hour storm event and under Option 2, 100 percent of stormwater from the site would be directed to underground retention facilities designed for a 100-year storm event. Under both options, the proposed bioretention basins/facilities would be designed to maintain as much on-site groundwater recharge as is feasible to avoid contributing to the cumulative impacts to natural groundwater recharge from new impervious surfaces. Cumulative developments would be subject to similar requirements for bioretention basins that would result in on-site recharge, which would reduce impacts to the Madrone Channel recharge facility.

Stormwater runoff for proposed developments north of Half Road would be allotted 120 cubic feet per second (cfs) at a rate of 0.42 cfs/acre. Stormwater runoff from future developments north of Half Road (including the Crosswinds development) would not exceed 109 cfs during a 100-year event. Therefore, the project and cumulative projects north of Half Road, would not exceed the flow capacity at the Madrone Channel. For these reasons, the cumulative projects, including the

proposed project (under both options), would not result in significant cumulative hydrology or water quality impacts. **(Less than Significant Cumulative Impact)**

Page 192 Section 4.17.2, Impact Discussion; the text will be ADDED in the condition of approval as follows:

Condition of Approval TRN-1: The project shall pay a fair share contribution toward the installation of a southbound and northbound bus stop, including street lighting, landscaping, and a new passenger pad, after the main entrance on Mission View Drive.

Pages 192-193 Section 4.17.2, Impact Discussion; the text will be ADDED in MM TRN-2 as follows:

Mitigation Measure: The following mitigation measures would reduce the VMT per capita generated by the project.

MM TRN-2.1: Prior to project occupancy, the project applicant shall develop and implement a Transportation Demand Management (TDM) plan which targets achieving a reduction in residential vehicle trips to and from the site. The TDM plan shall be prepared by a qualified traffic consultant and in coordination with the City of Morgan Hill Development Services Director or Designee. The TDM plan shall quantify the reduction in VMT. The TDM shall require the project applicant to make a financial contribution to the City's on-site demand rideshare service (MoGo), as a one-time or annual financial contribution based on City approval, or ~~D~~during project operations, the management entity/Homeowners Association (HOA) shall provide fully (100 percent) subsidized annual VTA transit passes for all project homeowners (a maximum of one transit subsidy per residential unit, which would result in up to 269 transit passes per year). This subsidized transit program shall be approved by the City of Morgan Hill's Public Services Director or Director's designee prior to issuance of occupancy. The HOA shall submit a receipt and documentation to the City showing that the transit passes have been purchased annually.

The project (under Options 1 and 2) would also incorporate the following design features to reduce project VMT by improving pedestrian connections and providing bicycle facilities:

- The project (under Options 1 and 2) will improve the surrounding pedestrian network by including sidewalks which terminate at the common property line, allowing for connections to the adjacent property in the event there is development in the future. The project proposes continuous sidewalks along the project frontages (under Options 1 and 2). The proposed frontage improvements along Mission View Drive, Half Road, and De Paul Drive include sidewalk improvements.

- The proposed project (under Options 1 and 2) will include 64 bicycle parking spaces distributed through the proposed development.

Page 214 Section 4.19.2, Impact Discussion; the text will be ADDED and REVISED in the second paragraph as follows:

The 33-acre site is mostly undeveloped and consists of grassland and boxed trees. A vacant single-family residence constructed in the 1950s is located on the southwestern section of the site. One ~~or two~~ private well~~s~~ supplies~~y~~ water to the residence ~~and tree nursery~~. There is an abandoned off-site well at the adjacent property to the west, which was historically used to supply water to the project site's tree nursey. The off-site well is no longer active. Total current groundwater use on site is approximately 0.64 acre-feet per year (AFY), as shown in Table 4.19-1 below.

Table 4.19-2: Current Groundwater Use On-Site	
Water Use Category	**Current Water Use (AFY)**
Vacant Rural Residence	0.64
~~Containerized Trees~~	~~17.90~~
Total Current Water Use	**0.64~~18.54~~**
Source: Todd Groundwater. *Half Road and Mission View Water Demand Memo*. February 2023 ~~April 13, 2021~~.	

Pages 219-220 Section 4.9.2, Impact Discussion; the text will be REVISED as follows:

As shown in Table 4.19-2, the proposed project would result in a gross water demand of 42.31 acre-feet per year (AFY), or approximately 13.8 million gallons per year (under Options 1 and 2).[7] It is assumed that full buildout of the project would be completed by 2026. When considering the existing water use on-site (0.64~~18.54~~ AFY), the project would result in a net increase in groundwater demands of about 41.67 ~~23.77~~ AFY.

Total water use in the City of Morgan Hill is expected to increase to 9,155 AFY in 2025, 9,760 AFY in 2030, and 10,366 AFY in 2035. Estimates of water use increases are based on expected population growth in the City. The population increases and water demand projections of the proposed project were compared to those of the UWMP to determine if the water demand of the project is included in the UWMP planning projections. Assuming an average of 3.14 occupants per residential unit, the project would result in 845 new residents. The UWMP expects a population increase of 6,800 persons to occur between 2020 and 2030; therefore, the project's population increase is accounted for in UWMP population projections. The UWMP projects an increase of 1,706 AFY for single-family and multi-family development water demand between 2020 and 2040. The project would use approximately 2.5 percent of the water demand allotted for single-family plus multi-family growth

[7] 1 acre-foot = 325,851.43 gallons

set forth in the UWMP. The project demands are consistent with the UWMP water demand projection increases for residential water use sectors; therefore, the proposed project's water demands were accounted for in the 2015 UWMP projections. As a result, there would be sufficient water supplies available to serve the project (under both project options).

Water Supply Reliability

The WSA compared supply and demand during normal, single-dry, and multiple-dry years for a 20-year projection. On an annual basis, the City has been able to provide sufficient supplies to meet demand during normal, single-dry, and multiple-dry year periods. The proposed project is included within the population and water demand projections included in the UWMP. The proposed residential uses of the project are consistent with allowable density under the current General Plan designation. Therefore, the project is included as part of the expected citywide demand increases through 2040. The UWMP found that the City will continue to adequately meet increased demands within its jurisdiction for normal, single-dry and multiple-dry year scenarios through 2040. Thus, the estimated net increase in demand on the site of 41.67 ~~23.77~~ AFY (or 13.6 million ~~7,745,488~~ gallons per year) would be adequately supplied by existing sources.

Pages 219-220 Section 4.19.2, Impact Discussion; the text in the first paragraph of Page 220 will be ADDED as follows:

Total water use in the City of Morgan Hill is expected to increase to 9,155 AFY in 2025, 9,760 AFY in 2030, and 10,366 AFY in 2035. Estimates of water use increases are based on expected population growth in the City. The population increases and water demand projections of the proposed project were compared to those of the UWMP to determine if the water demand of the project is included in the UWMP planning projections. Assuming an average of 3.14occupants per residential unit, the project would result in 845 new residents. The UWMP expects a population increase of 6,800 persons to occur between 2020 and 2030; therefore, the project's population increase is accounted for in UWMP population projections. The UWMP projects an increase of 1,706 AFY for single-family and multi-family development water demand between 2020 and 2040. The project would use approximately 2.5 percent of the water demand allotted for single-family plus multi-family growth set forth in the UWMP. In addition, the water conservation measures that would be implemented by the proposed project include the installation of individual water meters in all single-family residential and duet units and a water submeter in the condominium units to manage water use. The project demands are consistent with the UWMP water demand projection increases for residential water use sectors; therefore, the proposed project's water demands were accounted for in the 2015 UWMP projections. As a result, there would be sufficient water supplies available to serve the project (under both project options).

Page 220 Section 4.19.2, Impact Discussion; the text in the third paragraph will be REVISED as follows:

The City's sole source of water supply, groundwater from the Llagas and Santa Clara subbasins, is a shared resource managed by Valley Water through the Sustainable Groundwater Management Act

(SGMA) process. The 2018 Water Year Report for SGMA reporting concluded that Valley Water's comprehensive recharge programs continue to support a balanced long-term water budget for the two subbasins. Valley Water's 2016 Groundwater Management Plan (GWMP) for the Santa Clara and Llagas Subbasins describes groundwater sustainability goals, and the strategies, programs, and activities that support such goals. In 2019, the Department of Water Resources (DWR) approved the 2016 GWMP for both basins, determining it satisfies the objectives of SGMA. In 2021, Valley Water submitted to DWR the first required periodic update of the GWMP that describes updated groundwater management outcome measures, programs, and activities. The ongoing, active management of these Llagas and Santa Clara subbasins will ensure that there is reliable long-term supply of water for the proposed project (under Options 1 and 2). **(Less than Significant Impact)**

SUBJECT: Public Notice of Availability of an Environmental Impact Report for Half-Dividend (Crosswinds) Residential Development

The County of Santa Clara Roads and Airports Department (The County) appreciates the opportunity to review the Public Notice of Availability of an Environmental Impact Report for Half-Dividend (Crosswinds) Residential Development. We submit the following comments:

- We recommend that the City take over/annex the full road maintenance and improvement along the site's Half Road frontage up to Mission View Dr.
- We would like to know who will maintain the new signalized intersection of Mission View Dr and Half Rd. if approved. County maintains both approaches of Half Rd but not Mission View Dr.
- Provide pedestrian connection between the cul-de-sac at DePaul Dr and Half Rd.
- *8. Mission View Drive and Half Road*
  The Mission View Drive and Half Road intersection is projected to operate at an unacceptable LOS F during both the AM and PM peak hours under Year 2030 Cumulative without and with project conditions. Additionally, based on the peak hour traffic signal warrant checks, this intersection would have traffic volumes that meet thresholds that warrant signalization during both the AM and PM peak hours under Year 2030 Cumulative without and with project conditions. This constitutes an adverse effect on intersection operations based on the City's level of service standards.
    - The County's Condition of Approval: The project applicant shall pay a fair share contribution toward installing a signal at the Mission View Drive and Half Road intersection.

Thank you again for your continued outreach and coordination with the County. If you have any questions or concerns about these comments, please feel free to contact me at ben.aghegnehu@rda.sccgov.org

Thank you,

Board of Supervisors: Mike Wasserman, Otto Lee, Susan Ellenberg, S. Joseph Simitian, Cindy Chavez
County Executive: Jeffrey V. Smith

Re: Draft Environmental Impact Report (DEIR) Comments for Half-Dividend (Crosswinds) Project

Dear Gina,

Thank you for the opportunity to review this project. VTA has the following comments on the Draft Environmental Impact Report for the Half-Dividend Crosswinds project.

Vehicle Miles Traveled Impact and Mitigation Measures

The DEIR notes that the proposed project would have a Significant and Unavoidable impact in the area of Vehicle Miles Traveled (VMT) during project operations, Impact TRN-2.2. The DEIR and Transportation Impact Analysis (TIA) report indicate that "The project applicant would need to implement VMT reduction measures to achieve a 24 percent reduction (27.41 to 20.94) in its VMT per capita for the proposed residential project to reduce the project's VMT impact to less than significant (under Options 1 and 2). However, the available feasible mitigation measures are not capable of such reduction" (DEIR p. 193).

In light of the fact that this project will have a Significant and Unavoidable VMT impact, VTA recommends that the City work with the project applicant to provide further measures to incrementally reduce project VMT. In addition to those measures included in Mitigation Measure TRN-2.2, VTA recommends the following:

- The subsidized transit pass program included in Mitigation Measure TRN-2.2 should include a monitoring and verification mechanism to ensure that the passes are being provided over time. For instance, the City can require that the project management entity / Homeowners Association submit a receipt annually showing that the required transit passes have been purchased, and documentation showing that the passes have been distributed to residents.
- The project should provide a mid-block pedestrian crossing to connect between the new sidewalk along the project's Mission View Drive frontage and the existing sidewalk on the east side of Mission View Drive. Consideration should be given to providing bulb-outs and a pedestrian signal or warning device to improve safety for pedestrians crossing Mission View Drive to access VTA bus services and other destinations north of the side along Cochrane Road.

- While VTA understands that there will be no general vehicle (non-emergency vehicle) access between the DePaul Drive extension and Half Road, the project should provide a connection for pedestrians and cyclists at the end of the proposed DePaul Drive cul-de-sac, to improve connectivity to the points south including Live Oak High School and the Madrone Channel Trail.

Bus Stop Improvements

VTA previously submitted these comments, however the site plan was not updated to reflect any recommendations. These recommendations help support further reducing solo vehicle trips. VTA Route 87 serves the frontage of the project on Mission View Drive. The stop spacing in-between the two nearest stops of the development is 3,400 feet and does not have close enough pedestrian facilities nearby to access the nearest stops. A new southbound bus stop should be installed after the main entrance on Mission View Drive. A bus stop in the northbound direction is also recommended on the condition that there will be a signalized crosswalk for the new development. The preferred location for the new bus stop is past the main entrance on Mission View Drive. VTA would like to determine the location when off-site plans are drafted (see attachment). VTA also recommends to:

- Install street lighting at the bus stop
- Place trees and landscaping outside of the bus stop area C
- Install a new passenger pad 8’x40’ minimum per VTA Standards

Thank you for the opportunity to review this project, If you have any questions, please contact me at 408-550-4559.

Sincerely,

Brent Pearse
Transportation Planner

Subject: Half-Dividend (Crosswinds) Residential Development Draft EIR Comments

Dear Gina:

The Santa Clara Valley Water District (Valley Water) has reviewed the draft Environmental Impact Report (EIR), dated November 2022, for the proposed Crosswinds residential development on Half Road (Project). The following comments are based on Valley Water's review of the draft EIR:

1. **Section 4.9.2.1 – Project Impacts, Water Well and Septic System (Page 126):** Valley Water agrees with the DEIR evaluation that the one abandoned well located during the on-site reconnaissance should be properly destroyed in accordance with Valley Water Ordinance 90-1. Based on Valley Water well records, there is one active water supply well (09S03E16J005) with a well log located on APN 728-30-004. However, due to the long agricultural history of the Santa Clara and Llagas subbasins and subsequent land development, there are likely many abandoned or unregistered wells in the subbasins. While some of these wells may have been sealed prior to well permitting requirements, many have open casings and may be discovered during construction of the Project. If other abandoned or unregistered wells or well-like structures are discovered or encountered during Project construction, Valley Water's Wells Hotline should be immediately contacted to assist in the identification of these wells or structures and help determine the appropriate means of addressing them, such as proper destruction by a C-57 licensed driller with related work permit and inspection by Valley Water Wells Unit. Therefore, Valley Water also agrees with MM HAZ-2.7 listed in Table 1.2-1, which states "If the wells are identified, or subsequently encountered during earthwork activities, the wells shall be properly destroyed in accordance with Valley Water Ordinance 90-1.".

2. **Section 4.10.1.1 – Hydrology and Water Quality, Existing Conditions, Groundwater (Page 133):** Previously on page 126, the DEIR stated there was only one water well identified during the on-site reconnaissance. However, this section of text on page 133 explains "there are two existing wells on the property associated with agricultural activities that have been occurring on the property for decades. With the cessation of agricultural activities, the wells are no longer in regular use." If there are two wells on the property, please fix the text on 126 for consistency to include the correct number of wells and provide details that both abandoned wells will be destroyed.

3. **Section 4.10.1.1 – Hydrology and Water Quality, Existing Conditions, Groundwater Section and Post-Construction Water Quality Section (Pages 133 and 136):** The DEIR states "The site does not contain aquifer recharge facilities, such as streams or ponds.". While this statement is true, the stormwater runoff options 1 and 2 of the post-construction water quality (page 136) both mention Madrone Channel, which is a Valley Water managed aquifer recharge facility. Option 1 states "discharge into the public storm drain system to Madrone Channel" and option 2 states "no discharge to Madrone Channel". Valley Water recommends adding text to either page 133 or 136 explaining that Madrone Channel is used by Valley Water for managed aquifer recharge that supports groundwater sustainability in the Llagas Subbasin. Additional details about the managed recharge in Madrone Channel can be found in Valley Water's 2021

DocuSign Envelope ID: EA1CBF19-0340-4C31-B7A7-FE5CF16A4881

Groundwater Management Plan, Appendix I (https://www.valleywater.org/your-water/where-your-water-comes/groundwater/sustainable). Since Option 1 could discharge stormwater directly into Madrone Channel and Madrone Channel is a managed recharge facility, Valley Water recommends adding text to explain if Option 1 would have any impact on the quality of stormwater flowing into Madrone Channel and thus the quality of recharge to the aquifer.

4. **Section 4.10.2.1 – Hydrology and Water Quality, Project Impacts, Impact HYD-2 (Page 136):** The EIR correctly states that the Project site is not in a groundwater recharge facility. Although the site is not part a part of, or adjacent to, a formally managed recharge facility, the project is in an area of the county that supports natural groundwater recharge (see the *2021 Groundwater Management Plan for the Santa Clara and Llagas Subbasin*). Natural groundwater recharge is an important element of the county's overall water supply, representing approximately 15% of the supply available. The cumulative effect of development throughout the county over the last 50 years has substantially reduced natural groundwater recharge as naturally pervious surfaces have been developed with impervious surface. Natural groundwater recharge is especially important in the Coyote Valley sub-area of the Santa Clara Subbasin, which relies exclusively on natural recharge and managed in-stream recharge in Coyote Creek to maintain groundwater levels. To avoid the potential cumulative impact to natural groundwater recharge from new impervious surface, the proposed bioretention basins and other elements of the stormwater management plan should be designed to maintain as much natural groundwater recharge that is currently provided by the property.

5. **Section 4.10.2.1 – Hydrology and Water Quality, Project Impacts, Post- Construction Water Quality (Page 136):** The bottom of the page states "The existing well on the 33-acre property would be properly removed under permit from Valley Water, as required per the District Well Ordinance". If there are two wells on the property (as stated on page 133), the text on page 136 should be updated to reflect both wells.

6. **Section 4.10.2.2 – Hydrology and Water Quality, Project Impacts, Impact HYD-3 (Page 137):** While the project site is not a managed aquifer recharge facility, as correctly stated on page 136, the 33 acres of pervious surfaces currently allow for natural recharge. Both natural recharge and managed recharge support sustainable groundwater conditions in the Santa Clara and Llagas Subbasins. Page 137 explains that the 33 acres of "nearly entirely pervious" surfaces will be converted by the proposed development to about 75% impervious and 25% pervious surfaces. Valley Water recommends additional text is provided in the EIR to explain if, and how the reduction in pervious surfaces will affect natural recharge to the aquifer. Given the differences in the stormwater management plans for Option 1 versus Option 2, please also add text explaining if one of the options is preferable in terms of maintaining current natural recharge at the site.

7. **Section 4.10.2.2 – Hydrology and Water Quality, Project Impacts, Impact HYD-3 (Page 137):** The EIR states that the project would not "substantially increase the rate or amount of surface runoff in a manner which would result in flooding on-or off-site" and "create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage system..." The basis of this determination should be supported by a detailed analysis which compares pre- versus post-development conditions and provides justification for the design of the proposed retention basins. Furthermore, the EIR proposes two options to manage stormwater runoff. According to Section 3.2.4 of the EIR – 'Storm Drainage Improvements,' Option 1 would be designed to detain runoff from the 25-year, 24-hour storm event, and "Excess runoff from the site would drain to the Santa Clara Valley Water District's (Valley Water's) Madrone Channel (Page 19)." The EIR should include a more detailed discussion of the potential impacts from Project Option 1 and determine the anticipated runoff (both volume and rate) if Option 1 is subjected to the 100-year, 24-hour storm event. The City has been working with Akel Engineering on a hydrology report detailing the Madrone Channel drainage basin and the allowable runoff contributions into Madrone Channel. Moreover, this study concluded that all developments north of Half Road should be restricted to a total of flow rate of 120 CFS; this equates to 0.42 CFS/acre. If Option 1 is the chosen alternative, the EIR should acknowledge this restriction and design the mitigation measures accordingly.

DocuSign Envelope ID: EA1CBF19-0340-4C31-B7A7-FE5CF16A4881

8. **Section 4.10.2.2 – Hydrology and Water Quality, Cumulative Impacts, Impact HYD-C (Page 138):** The text state that "the project would not impact groundwater recharge and would not conflict with the SCVWD's 2016 Groundwater Management Plan." Valley Water recommends updating this text to reflect

   Valley Water's 2021 Groundwater Management Plan. Valley Water also recommends revising this text as needed in response to Valley Water's previous comments about natural recharge and stormwater into Madrone Channel (recharge facility).

9. **Section 4.10.2.2 – Hydrology and Water Quality, Cumulative Impacts, Impact HYD-C (Page 138):** The EIR states that the proposed development, from a cumulative standpoint, would not have a significant impact to the existing hydrology. A hydrologic analysis of the Madrone Channel drainage basin should be included with the EIR to support this finding. The analysis should assess the anticipated runoff (volume and rate) generated under post-development conditions, and account for contributions from other planned developments within the Madrone Channel drainage basin. Moreover, the analysis should demonstrate that Madrone Channel has adequate capacity (including freeboard) to receive and convey the cumulative runoff without inducing flooding downstream of the development. As noted, in Comment #3, the EIR should acknowledge the allotted runoff quantity for all developments north of Half Road, as determined in the study by Akel Engineering, which is roughly 120 CFS, or 0.4 CFS/acre. Moreover, the mitigation measure proposed under Option 1 should consider this restriction when determining the runoff generated cumulatively with other proposed developments in the Madrone Channel drainage basin.

10. **Section 4.19.1.2 – Utilities and Service Systems, Project Impacts, Existing Conditions, Water Service (Page 214):** The DEIR states on page 214 "One or two private wells supply water to the residence and tree nursery." Please ensure this sentence and all the previously mentioned sentences about the number of existing wells on this property are consistent. Some statements say one well and others say two wells.

11. **Section 4.19.1.2 – Utilities and Service Systems, Project Impacts, Existing Conditions, Water Service (Page 214):** The DEIR states that current groundwater use on-site is 18.54 acre-feet per year (AFY). However, based on Valley Water well production records, there is only one well (09S03E16J005) on the Project APNs with a reported production history that is typically <1 AFY. Given that information, the estimated groundwater use of 18.54 AFY greatly over-estimates actual reported groundwater use. In turn, this greatly over-estimates the statement on page 219 about increased groundwater demands "…the project would result in a net increase in groundwater demands of about 23.77 AFY." If actual groundwater use was closer to 1 AFY, then the net increase in groundwater demands due to the Project would be closer to the gross water demands of about 42 AFY. Valley Water recommends reevaluating the water supply assessment regarding actual, historical groundwater use on-site.

12. **Section 4.19.1.2 – Utilities and Service Systems, Project Impacts, Existing Conditions, Storm Drainage (Page 215):** The DEIR correctly states "The Madrone Channel (managed by Valley Water) is located approximately 1,000 feet west of the site. The Madrone Channel carries stormwater runoff from the area and also functions as a groundwater recharge basin." Please use this or similar text to address our comment on page 133 about Madrone Channel.

13. **Section 4.19.2.1 – Utilities and Service Systems, Project Impacts, Text Related to Table 4.19-2 (Page 219):** The DEIR states "As shown in Table 4.19-2, the proposed project would result in a gross water demand of 42.31 acre-feet per year (AFY)…". However, the table 4.19-2 states that 42.31 AFY is an average between Water Demand based on WSMP net area and the Water Demand based on units of building area. Therefore, Valley Water recommends adding the word "average" to the sentence to more accurately reflect the information presented in the table: "As shown in Table 4.19-2, the proposed project would result in an average gross water demand of 42.31 acre-feet per year (AFY)…"

DocuSign Envelope ID: EA1CBF19-0340-4C31-B7A7-FE5CF16A4881

14. **Section 4.19.2.1 – Utilities and Service Systems, Project Impacts, UTL-2, Water Supply Reliability (Page 220):** The analysis of water supply concludes that the project is consistent with the City's 2016 (and presumably 2020) Urban Water Management Plan (UWMP). The UWMPs for Morgan Hill and for Valley Water both assume substantial increases in water conservation to manage future water demands. To meet water conservation targets assumed in the UWMPs, Valley Water suggest that all available water conservation measures be required of the project, including requiring all multi-family residential units to install a submeter to encourage efficient water use. Studies have shown that adding submeters can reduce water use 15 to 30 percent.

15. **Section 4.19.2.1 – Utilities and Service Systems, Project Impacts, UTL-2 (Page 220):** The DEIR correctly states, "The City's sole source of water supply, groundwater from the Llagas and Santa Clara

    subbasins, is a shared resource managed by Valley Water through the Sustainable Groundwater Management Act (SGMA) process" and references the 2018 SGMA Water Year regarding a balanced long-term groundwater budget.

    Since the 2018 water year report is about five years old, Valley Water recommends adding the following text to this paragraph to provide the most current information on Valley Water's groundwater management under SGMA:

    "Valley Water's 2016 Groundwater Management Plan (GWMP) for the Santa Clara and Llagas Subbasins describes groundwater sustainability goals, and the strategies, programs, and activities that support such goals. In 2019, the Department of Water Resources (DWR) approved the 2016 GWMP for both basins, determining it satisfies the objectives of SGMA. In 2021, Valley Water submitted to DWR the first required periodic update of the GWMP that describes updated groundwater management outcome measures, programs, and activities."

    The 2021 GWMP is publicly available here on this webpage: https://www.valleywater.org/your-water/where-your-water-comes/groundwater/sustainable" The 2021 GWMP should also be referenced in the discussion on Impact HYD-5 on page 138.

16. **General:** The proposed sanitary sewer modifications along Half Road will require an encroachment permit for any modifications that will cross, or take place over the pipeline, and/or impact any appurtenances for the pipeline. It should be noted that Valley Water is a Responsible Agency under CEQA due its discretionary approval authority over Half Road pipeline and its appurtenances.

If you have any further questions regarding Valley Water's comments, you may contact me at (408) 630-3066 or email me at bhwang@valleywater.org.

Thank you,

Half-Dividend (Crosswinds) Residential Development Draft EIR Comments

From: Joe Baranowski,
Date: January 3, 2022

The DEIR correctly emphasizes that project impacts must be considered on a cumulative basis.

(pg. 25) The CEQA Guidelines advise that a discussion of cumulative impacts should reflect both their severity and the likelihood of their occurrence (CEQA Guidelines Section 15130(b)). To accomplish these two objectives, the analysis should include either a list of past, present, and probable future projects or a summary of projections from an adopted general plan or similar document (CEQA Guidelines Section 15130(b)(1)). This EIR uses the list of projects approach.

The analysis must determine whether the project's contribution to any cumulatively significant impact is cumulatively considerable, as defined by CEQA Guideline Section 15065(a)(3). The cumulative impacts discussion for each environmental issue accordingly addresses the following issues: 1) would the effects of all of past, present, and probable future (pending) development result in a significant cumulative impact on the resource in question; and, if that cumulative impact is likely to be significant, 2) would the contribution from the proposed project to that significant cumulative impact be cumulatively considerable?

Comment 1: Cumulative Toxic Air Contaminants are underestimated because 'cumulative' pending projects are not accounted for at all or are incorrectly modeled.

Page 65 of the DEIR, Table 4.3-10 shows that effects of TAC Sources (e.g., cancer risk) to Project Site Receptors is based on Average Daily Trips on Mission View Drive of 14,020.

Appendix B of the DEIR states that: *The average daily traffic (ADT) for Mission View Drive were based on AM and PM peak-hour cumulative plus project traffic volumes for the nearby roadways provided by the project's traffic consultant. The calculated ADT on Mission View Drive was 14,020 vehicles.*

The only reference to the assumed Mission View Drive ADT value was "Correspondence with Maria Kisyova, Assistant Project Manager, David J. Powers & Associates, Inc., November 10, 2020, *Hexagon - The Crosswinds Trip Gen and Volumes 11-10-20*."

However, the DEIR states that:

The only other known TAC source within 1,000 feet that would affect residents of the proposed project are operational truck trips that would be associated with the approved Redwood Tech project immediately west of the site. At this time, the number of operational truck trips, truck routes, or associated emissions with the pending Redwood Tech project are unknown. However, based on modeling completed for a former industrial project proposed on that site in 2019

approximately two times larger than the current Redwood Tech project, the combined effect of emissions of truck operations from the pending Redwood Tech project and vehicle emissions from Mission View Drive would not likely result in a substantial cumulative effect from TAC sources (i.e., would not likely exceed cumulative BAAQMD thresholds) on sensitive receptors at the site. If the Redwood Tech project undergoes construction after the proposed project (under Options 1 and 2) starts operations (and residents are on-site), the cumulative effect of construction and operations of the Redwood Tech project may result in substantial cancer risks without the implementation of conditions of approval for construction emissions.

The assumption regarding TAC sources in the above paragraph are wrong for a number of reasons.

A) **The modeling done for the "former industrial project approximately two times larger than the current Redwood Tech project" is not consistent with ITE standards or known information.**

An expert with qualifications that include registration as a Civil and Traffic Engineer in California, over 50 years professional consulting practice in these fields and both preparation and review of the traffic and transportation components of numerous environmental documents prepared under CEQA, reviewed the Redwood@101 Project and wrote a report dated May 20, 2021 which the City received and is aware of.

In that report, the author noted that the Redwood@101 project is "best described as a Business Park". That Land Use best matches the developer's documentation and statements to the Morgan Hill Planning Commission and City Council where the exact designation of "Business Park" was indeed spoken. The expert stated that the Redwood@101 land use, as stated BY THE DEVELOPER, corresponds to the description for Land Use Category 770, Business Park in the Institute of Transportation Engineers (ITE) Trip Generation, 10th Edition.

Based on the Redwood@101 building area the ITE Trip Generation manual indicates that approximately 6040 Average Daily Trips (ADTs) would be generated by the Redwood@101 project. This is higher than the number of ADT that were assumed for the 'twice as large" project.

Regarding the number of Truck Trips, the "twice as large" study assumed that "each truck service door would turn over once per day on average". That assumption is not consistent with modern operations or with ITE studies on buildings with a high number of dock doors.

B) **The Average Daily Trips that the approved Cochrane Commons Phase 2 project will generate on Mission View Drive are not accounted for at all.**

The DEIR incorrectly states that *Table 3.4-1 identifies the approved (but not yet constructed or occupied) and pending projects within one mile of the project site that are evaluated in the cumulative analysis. Other pending projects in the City are located at least two miles away from*

the project site.

The *"Cochrane Commons Mixed-Use Development Transportation Operations Analysis, December 10, 2021"* shows that the approved project that is less than two miles away for the Crosswinds project site is estimated to generate 9,857 Average Daily Trips, many of which will result in travel along Mission View Drive.

As the DEIR states: *The substantial exposure to TACs for new project receptors is evaluated via the following criteria: (1) increased cancer risk, and (2) annual $PM_{2.5}$ concentration. Exposure to annual $PM_{2.5}$ concentrations from Mission View Drive traffic is above the BAAQMD single-source threshold of 0.3 $\mu g/m_3$. Cancer risk mostly results from exposure to diesel particulate matter, although gasoline vehicle exhaust contributes to this effect. Annual $PM_{2.5}$ concentrations are based on the exposure to $PM_{2.5}$ resulting from emissions attributable to truck and automobile exhaust, the wearing of brakes and tires, and roadway dust from vehicles traveling over pavement. Reducing particulate matter exposure would reduce both annual $PM_{2.5}$ exposures and cancer risk.*

The exposure to TACs for the Crosswinds project has used a false assumption for the number of CUMULATIVE Average Daily Trips that will be occurring on Mission View Drive and thus the results do not reflect the cumulative exposure or associated risk.

Comment 2: The traffic operations analysis done for the Crosswinds project is *completely meaningless* because 'cumulative' pending projects are not accounted for at all. This IS a matter of CEQA and thus of the DEIR review because CEQA guidelines require that consistency to a General Plan must be considered.

Appendix G of the DEIR states: *The traffic operations analysis provides supplemental analysis for use by the City of Morgan Hill in identifying potential improvement of the transportation system that may be included as part of the project's Conditions of Approval. However, the identified roadway operations and improvements are not required or considered project impacts per CEQA guidelines.*

First of all we should be clear that California Public Resources Code, Section 21099 (b)(4) states that the updated VMT subdivision *does not preclude the application of local general plan policies, zoning codes, conditions of approval, thresholds, or any other planning requirements pursuant to the police power or any other authority*.

CEQA guidelines require that a lead agency conducting environmental review of a project must consider whether the project would conflict with any applicable land use plan, policy or regulation including the General Plan.

The Morgan Hill General Plan requires a traffic impact study be done when a project generates 100 or more net new peak hour trips. The Crosswinds project exceeds the Trip Generation Threshold by a wide margin.

The Morgan Hill Transportation Impact Study Policy states that **at a minimum** the following **shall be** included in a transportation study.

1) The study shall acknowledge and identify the use of other traffic reports completed for other projects within the same area.

2) Existing Project Conditions: Background traffic volumes, existing volumes plus the volumes from approved but not yet constructed or occupied development in the area plus traffic from the proposed project.

3) Cumulative No Project Conditions and Cumulative Plus Project Conditions – from approved projects plus traffic from pending projects

Instead the City and their consultants have willfully and knowingly chosen to simply ignore the projected impacts from VERY large projects already approved in the immediate vicinity of Crosswinds. NONE of the results in the Crosswinds traffic operations analysis are relevant. The number of new Average Daily Trips in the immediate area from projects that have been recently approved (plus Crosswinds) but not yet developed is approximately **18,500** and yet not a single analysis of any type has considered the cumulative traffic impact. This is absurd, irresponsible and a gross failure to follow the City's General Plan and a failure to give any consideration whatsoever to the health, safety, and welfare of Morgan Hill residents living in the area.

Final

Attn: Chris Ghione, Public Services Director

Subject: **Proposed New 42" Storm Drain Outfall at Half Road**

Dear Chris,

The purpose of this letter memorandum is to provide an update on the size requirement for the proposed storm drain outfall at Half Road, and which was identified in the 2018 Storm Drain Master Plan (2018 SDMP). This letter memorandum includes the following sections

- Relevant Documents
- Madrone Channel Remaining Capacity
- Proposed Half Road Outfall
- Managing the Madrone Remaining Allotments
- Conclusions and Recommendations

1.0 RELEVANT DOCUMENTS

The following relevant documents were reviewed and referenced during this analysis, as they impacted the size requirement for the Half Road Outfall.

1. **2018 Morgan Hill Storm Drainage System Master Plan** (Akel) – This document is a City-wide hydrology and hydraulic evaluation of the storm drainage requirements and includes proposed improvements to mitigate existing deficiencies as well as to accommodate future growth.
2. **2022 Madrone Channel 2D Floodplain Study** (Kasraie, August 2022) – This hydrology document was focused on the Madrone Channel tributary and evaluated the capacity constraints for existing land use conditions, as well as for the impacts of potential future developments from currently vacant lands. This study was commissioned by the City of Morgan Hill and by Valley Water.
3. **Post-Construction Stormwater Control Plan for San Sebastian: Phase 3 & 4** (RJA, March 2021) – This hydrology report compared the pre-development and post-development runoff for the project during 2-year, 10-year, 25-year, and 100-year storm events.
4. **Post-Construction Stormwater Runoff Management Plan for The Crosswinds** (RJA, May 2020) – This hydrology report compared the pre-development and post-development

runoff for the project during 2-year, 10-year, 25-year. 100-Year hydrology calculations could not be found in this report.

5. **Stormwater and Hydrology Report for Redwood Technology Center at 101** (Kier & Wright, June 2022) **–** This hydrology report compared the pre-development and post-development runoff for the project during 2-year, 5-year, 10-year, 25-year, and 100-year storm events, and also included a detention basin analysis to reduce the impact to the downstream outfall. It should be noted that this hydrology report included Redwood Tech, the undeveloped lands north of Redwood Tech, as well as the De Paul Health Center.

2.0 MADRONE CHANNEL REMAINING CAPACITY

Valley Water has been diligently monitoring the capacity adequacy of the receiving waters within Santa Clara County, and their regional models have identified the Madrone Channel with capacity constraints, even during existing conditions. Due to the imminent nature of the developments along Half Road, Valley Water and the City of Morgan Hill agreed to work together and complete a more detailed 2-dimensional (2D) floodplain analysis for the Madrone Channel. Akel Engineering Group retained the services of Kasraie consulting, a renowned hydrologist, to complete this analysis.

The Kasraie analysis concluded that under existing conditions, 100-year 24-hour storm runoff from vacant lands within the Madrone tributary area does not all drain towards the Madrone Channel, but rather sheet flows in a southerly/southeasterly direction. Furthermore, the existing pipelines and outfalls are designed for 10-year 24-hour storm events, and do not usually facilitate the 100-year 24-hour runoff to discharge directly to the Madrone Channel.

According to the Kasraie analysis, the 2D floodplain analysis indicates the capacity constraint in the Madrone Channel is at the channel crossing under Tennant Avenue. This constraint can currently accommodate an additional capacity of **120 cfs**, including freeboard in the channel.

The Kasraie report also advised with a rough estimate for distributing this available 120 cfs to undeveloped lands:

- Additional runoff during 100-year storm events can be accepted at an approximate rate of 0.5 cfs per acre, and only for lands currently draining towards the Madrone Channel.

Madrone Channel Remaining Capacity
The 2D floodplain analysis indicates the capacity constraint in the Madrone Channel is at the channel crossing under Tennant Avenue. This constraint can currently accommodate an additional capacity of **120 cfs**, including freeboard in the channel.

It is important to note that this rough estimate was based on the existing drainage patterns in the 2D floodplain Model and which identifies lands currently draining towards the Madrone Channel. Lands that currently sheet flow southwards, and away from the Madrone Channel, were excluded from this rough 0.5 cfs per acre estimate.

Runoff flows exceeding the 120 cfs will trigger the construction of the 72-inch parallel culvert improvement at the Tennant Avenue crossing. It should be noted that, prior to any such culvert improvements, Valley Water will require a study to determine if this culvert improvement results in increased flooding, during 100-year storm events, in downstream channel reaches.

3.0 PROPOSED HALF ROAD OUTFALL

This section discusses the Half Road pipe size requirements, as stipulated in the 2018 SDMP, and as revised to account for changes in land use and stormwater drainage assumptions based on imminent developments.

3.1 2018 SDMP Assumptions

The 2018 Storm Drainage Master Plan reflected 2017 land use conditions and identified improvements needed to mitigate existing deficiencies, as well as improvements to service future growth. At the time, the Half Road tributary area, which is intended to discharge to the Madrone Channel, was largely undeveloped, including the area east of Peet Road, as shown on **Figure 1**. This figure shows the Half Road tributary (highlighted in a light-green color) extending eastward to Coyote Road. The hydraulic analysis, at the time, identified the corresponding outfall pipe size requirement at 54 inches, and continuing eastward with 48 inches.

3.2 2022 Land Use Conditions and Imminent Developments

The 2022 land use conditions for the Half Road tributary area has changed since the 2018 SDMP, as developments have been either occurring or currently being planned for imminent construction. The revised tributary area for Half Road is shown on **Figure 2**, and the mostly imminent developments within this area are discussed in this section.

3.2.1 San Sebastian (Tributary to Half Road)

The area previously tributary to Half Road, and east of Peet Road (North and South San Sebastian on **Figure 2**), is in different stages of development. This North San Sebastian area has been designed to retain 100-year 24-hour storms, while the South San Sebastian area was designed to detain 25-year 24-hour storms, and thus is still tributary to Half Road.

During the 100-year 24-hour storm events, stormwater runoff from the South San Sebastian area will exceed the south basin capacity and overtop Peet Road and flow southwesterly into Madrone Channel, and via the future Half Road storm drainage pipeline. It should be noted that the post-development release runoff from the South Sebastian area is less than the pre-development runoff.

3.2.1 Crosswinds

The area adjacent and to the east of the Redwood Tech development is known as the Crosswinds development (highlighted in a light-green color on **Figure 2**). This development consists of residential units, and its hydrology report includes calculations and quantifying storm runoff from up to 25-year 24-hour events. No 100-year 24-hour events were found.

3.2.2 County Area (Tributary to Half Road)

Though this area is currently under the County jurisdiction, there have been discussions of potential developments. This study assumes that this area will be draining to the future Half Road pipeline. Furthermore, the study assumes that either the County, or the City if this area is incorporated, will condition the development to construct 25-year 24-hour detention facilities.

3.2.3 Redwood Tech / Undeveloped Area to the north / De Paul Health Center (Not Tributary to Half Road)

The Redwood Tech development (highlighted in a light-blue color on **Figure 2**) was assumed tributary to the future Half Road outfall in the 2018 SDMP. This development is currently proposed to be draining northward to an existing, and private, detention facility, and then draining to the Madrone Channel via an existing 30-inches outfall. The hydrology report for Redwood Tech also included the undeveloped area to the north and which is labeled as "Future Dev. Area" on **Figure 2**, as well as the De Paul Health Center. These areas are also not tributary to Half Road, though they are included in the calculations to determine the additional runoff flows anticipated in the Madrone Channel.

3.2.4 Future Developed Area north of Redwood Tech plus Lands of Lee (Not Tributary to Half Road)

This study accounts for a reserved capacity from the future developments of the lands north of Redwood Tech.

3.3 2022 Half Road Outfall Pipeline Size Requirement

Based on the changes from the imminent developments discussed in this section, the analysis recommends reducing the outfall pipe size at Half Road from the master plan recommend 54-inches to 42-inches, as shown on **Figure 2**.

The revised outfall pipe size at Half Road is **42-inches.**

4.0 MANAGING THE REMAINING ALLOTMENTS

Developments within the Madrone Channel watershed tributary drainage area, and located north of Half Road, are currently going through various phases of approvals and are thus considered Imminent Growth. For that reason, City staff will be allocating the 120 cfs remaining capacity, as identified in the Kasraie report, to these imminent developments. Developments within the Madrone Channel watershed tributary area, and located south of Half Road, are considered Long-Term Growth.

4.1 Imminent Growth (North of Half Road)

This study includes a more detailed inventory of the remaining undeveloped lands within the Madrone Channel watershed, and north of Half Road. This inventory includes lands within the Madrone Channel watershed tributary area, even if they currently do not drain towards the Madrone Channel.

Developments north of Half Road are considered imminent and will be allotted the 120 cfs remaining capacity at a rate of 0.42 cfs/acre.

This inventory is documented on **Table 1**, and shown on **Figure 2**, and includes: the South San Sebastian development, the County Area, the Crosswinds, the Redwood Tech development, the future development area north of Redwood Tech, and the De Paul Health Center. **Table 1** and **Figure 2** further distinguish between developments tributary to the future Half Road drainage outfall, and those tributary to the De Paul drainage outfall.

This analysis estimated the 120 cfs available capacity can be distributed on existing undeveloped lands north of Half Road and which are considered imminent growth. Based on the land use inventory summarized on **Table 1**, and during the 100-year 24-hour storm event, an approximate

runoff flow rate of up to 0.42 cfs per acre can be allotted to these imminent developments, without exceeding the 120 cfs currently available capacity in the Madrone Channel. The following table provides a clarification to the modified allowable rate

Study	Allocation Rate for the 120 cfs Available Capacity	Assumptions
2022 Kasraie Study	**0.50** cfs per acre	This recommendation is based on the 2D floodplain study and applies only to lands currently draining towards Madone Channel.
This study	**0.42** cfs per acre	This recommendation is based on a detailed land use inventory (Table 1), for lands north of Half Road and tributary to the Madone Channel watershed, even if they do not currently drain towards the channel.

The developments north of Half Road are listed below, including a reference to their hydrology reports if applicable.

- **South San Sebastian.** South San Sebastian hydrology report indicates the 100-year storm runoff, overtopping the designed 25-year detention facilities, is estimated at 23 cfs. This amount is well below the allotment of 34 cfs.

- **County Area north of Half Road.** This area has not been developed and should be conditioned to construct a detention facility to accommodate a 25-year storm event. The maximum allowable runoff flows from this area during the 100-year 24-hour storm event should not exceed the current allotment of 33 cfs.

- **Crosswinds.** The Crosswinds hydrology report indicates that the 25-year runoff flow is estimated at 4.3 cfs. This development must provide the calculations for the 100-year runoff flow, and which should not exceed the allotment of 13.4 cfs.

- **Redwood Tech.** The hydrology report from this development indicates a 100-year storm runoff of 21.6 cfs.

- **Future Development north of Redwood Tech.** This study accounts for the development from the lands north of Redwood Tech, with an estimated additional runoff amount during the 100-year storm event of 17.9 cfs.

4.2 Long-Term Growth (South of Half Road)

Runoff flows tributary to the Madrone Channel and exceeding the 120 cfs during the 100-year 24-hour storm event, will require a parallel undercrossing improvement along the Madrone Channel as it crosses under Tennant Avenue. Morgan Hill should consider requiring long-term developments south of Half Road and north of Tennant Avenue, to contribute towards constructing a parallel pipeline crossing under Tennant Avenue. Until this proposed crossing has been constructed, these long-term developments should be required to construct retention facilities for 100-year 24-hour storm events.

Runoff flows tributary to the Madrone Channel and exceeding 120 cfs during the 100-year 24-hour storm event, will require a parallel culvert improvement along the Madrone Channel as it crosses under Tennant Avenue.

Also, as previously mentioned, and prior to constructing this culvert improvement, Valley Water will be requiring a study be completed to determine the impact of this improvement on the downstream segments of the Madrone Channel.

5.0 CONCLUSIONS AND RECOMMENDATIONS

This letter memorandum reviewed and updated the pipe size requirements for the future Half Road storm drain outfall, and reviewed the Madone Channel constraints as evaluated by the August 2022 Kasraie hydrology report, and includes the following conclusions and recommendations:

- **Morgan Hill is Actively Managing Runoff Impact to Downstream Waters.** Since the 2018 Storm Drain Master Plan (2018 SDMP), the City of Morgan Hill has been pro-active in requiring developers to construct detention facilities (usually designed for 25-year 24-hour) to mitigate the 100-year storm runoff impacts from the downstream receiving waters. In some cases, like Sebastian North, the developer was required to retain for 100-year 24-hour storm events.
- **Madrone Channel Remaining Capacity.** The Kasraie hydrology report concluded that there is approximately 120 cfs of remaining capacity in the Madrone Channel, at the bottleneck located at Tennant Avenue, to accommodate runoff flows from future or imminent developments, while maintaining freeboard requirements. Based on the available land use inventory shown on **Table 1**, this equates to 0.42 cfs per acre.
- **Imminent Growth North of Half Road can use the 120 cfs Remaining Capacity.** The analysis estimated this 120 cfs excess capacity can be distributed on existing undeveloped lands north of Half Road and which are considered imminent growth, including the Redwood Tech and Crosswinds Projects. During the 100-year 24-hour storm event, a runoff flow rate of up to 0.42 cfs per acre, can be allotted to these imminent developments, without exceeding the 120 cfs excess capacity in the Madrone Channel.

Imminent Growth North of Half Road can develop and use the 120 cfs Available Capacity in the Madrone Channel.

- **Long-Term Growth South of Half Road Require Channel Improvement at Tennant Avenue.** Runoff flows tributary to the Madrone Channel and exceeding 120 cfs during the 100-year 24-hour storm event, will require a parallel culvert improvement along the Madrone Channel as it crosses under Tennant Avenue. Morgan Hill should consider requiring long-term developments south of Half Road and north of Tennant Avenue, to contribute towards constructing a parallel pipeline crossing under Tennant Avenue.

  Long Term Growth South of Half Road requires culvert improvement at Tennant Avenue.

  It should be noted that, prior to any such culvert improvements, Valley Water will require a study to determine if this culvert improvement results in increased flooding, during 100-year storm events, in downstream channel reaches. Until this proposed crossing has been constructed, these long-term developments should be required to construct retention facilities for 100-year 24-hour storm events.

- **Revised Outfall Pipe Size Requirement at Half Road.** Based on the revised Half Road tributary area, and based on the City effectively managing runoff by requiring 25-year detention facilities from developers, the recommended revised Half Road outfall size is at 42 inches. This size continues east to the point of connection from the Crosswinds development, it then continues eastward on Half Road as 36 inches, then as 24 inches.

Sincerely,

AKEL ENGINEERING GROUP, INC.

TODD GROUNDWATER

February 23~~April 13~~, 2023~~1~~

UPDATED REVISED MEMORANDUM

To: Maria Kisyova and Amber Sharpe, David J. Powers & Associates, Inc.

From: Kate White, PE, Todd Groundwater

Re: The Crosswinds at Morgan Hill
Water Supply and Demand Evaluation, City of Morgan Hill

The City of Morgan Hill has requested David J. Powers to prepare a project-level analysis for a proposed residential development called the Crosswinds at Morgan Hill Project (Project). The Project is located at the intersection of Half Road and Mission View Drive in Morgan Hill and will consist of 269 residential units. David J. Powers has asked Todd Groundwater to provide a water supply and demand evaluation memorandum for the Project.

The California Water Code Section 10910 (also termed Senate Bill 610 or SB610) requires that a Water Supply Assessment (WSA) be prepared for a project that is subject to CEQA and is considered a project subject to SB610 as defined in Water Code Section 10912. The Crosswinds at Morgan Hill is subject to CEQA but is not subject to SB610 according to Water Code Section 10912. Therefore, a WSA is not needed for the Project but WSA-related information is provided in this memorandum to comprehensively document supply and demand conditions.

THE CROSSWINDS AT MORGAN HILL PROJECT DESCRIPTION

The Project is on an approximately 33-acre site in Morgan Hill (**Figure 1**). Its proposed 269 residential units will have the following breakdown:

- 56 single family
- 64 duet units
- 149 condominium units.

The site is bounded by Half Road to the southeast, Mission View Drive to the northeast, and DePaul Drive to the southwest (**Figure 2**). There will be a total of 40 below-market-rate units. The single-family detached residences would be constructed on the eastern and southern perimeters of the Project site, along Mission View Drive and Half Road. The attached duets would be constructed in the center of the Project site and three-story condominiums would be constructed along the western and northwestern perimeters of the site, along DePaul Drive and adjacent to a vacant parcel. A recreation center with a pool will

be located near the center of the site. Site improvements will include parking, small neighborhood parks, and landscape areas. Approximately 5.3 acres will be open space.

The development is proposed to be built in three phases with the northern portion built first followed by the southern half of the site. The third phase will be infill of two undeveloped portions on the northwest side of the site.

CURRENT SITE WATER USE

A residence, containerized tree nursery, and a reportedly unirrigated agricultural field occupy the site. One or two private wells supply water to the residence and tree nursery. According to the property seller, private well water use on the site has remained steady over the last ten years (as of 2019) (Decker, 2019).

The area immediately west of the Project site consists of additional containerized tree nursery land and an agricultural field. South of the Project site, across Half Road, is a vacant field with grasses and buildings used for industrial purposes. East of the Project site, across Mission View Drive, is a field with orchards and associated structures, and single-family residences. North of the Project site is an adjacent vacant parcel of land, health center and associated parking.

An estimate of the current groundwater use on the site is provided in **Table 1**.

Table 1. Current Water Use

Water Use Category on Project Site	Current Water Use (AFY)
	Private Well Use[1]
One Rural Residence (currently vacant)	0.64
~~Agriculture (containerized tree nursery)~~	~~17.90~~
Total Current Water Use	**0.64~~18.54~~**

AFY=acre-feet/year

1. Private well water use provided by property seller (Decker, 2019) and based on Santa Clara Valley Water District water billing records for July 2016-July 2018 for Well 09503E16J005 (non-agricultural) and Well 09503E16Q001 (agricultural). Water use has reportedly been steady for the past 10 years (as of 2019). The agricultural well is abandoned and is located on the adjacent property to the west. It previously~~also~~ supplie~~d~~s water to a tree nursery area to the west. It was estimated that about one-third of the agricultural well water use ~~occur~~occurred~~s~~ on the Project site (53.7 AFY/3=17.9 AFY).

PROJECT WATER DEMAND

Table 2 shows the projected water demands for the Project at buildout. Two different water demand estimates are presented for each development type listed in **Table 2**. The first set of demands was estimated using recommended water demand unit factors presented in the City's Water System Master Plan (WSMP) (Akel, 2017); these demands are shown in the second column from the right on **Table 2**. These are based on the recommended factors that are consistent with the 2015 UWMP, account for continued water conservation efforts implemented by the City and are based on net development area. They are assumed to represent development that uses advanced water conservation fixtures and practices and has drought tolerant vegetation. The second set of demand estimates use typical factors based on the number of units or building areas (last column on the right on **Table 2**); the estimates for residential use are higher than those using the WSMP recommended factors. An average of the two (42.31 AFY) was selected as the proposed buildout water demand of the Project. It is assumed that unaccounted water, such as water losses and fire protection, is included in these water demand factors.

Once completed, the Project will involve a net increase in groundwater demands of about 41.67~~23.77~~ AFY, which is the buildout Project demand of 42.31 AF minus estimated current water demand of 0.64~~18.54~~ AF.

Table 2. Buildout Water Demands

Development Type	Area (acres)	Land Use	Water Use Demand Factor[1,2]	Water Demand based on WSMP net area[3] (AFY)	Water Demand based on units or building area[4] (AFY)
Single Family Detached	3.88	56 Residential units	1,700 gpd/net acre or 0.2 AFY/unit	7.39	11.20
Duet Units	4.55	64 Duet units	1,900 gpd/net acre or 0.2 AFY/unit	9.68	12.80
Condominiums	6.49	149 Condos	2,300 gpd/net acre or 0.18 AF/unit	16.72	26.82
Recreation Center	1.16	Rec Center with kitchenette, restrooms and pool	3 AFY[3]	3.00	3.00
Irrigation	Included in other categories	Total of 8.16 acres of irrigated area[4]	Estimated Total Water Use[4]	16.21	16.21
Public and Private Right of Ways	11.80	Streets and rights of ways	Included in Irrigation category		
Open Space	5.30	Medians, parks, other landscaping	Included in Irrigation category		
Total	**33.18**	**269 units**		**33.79**	**50.82**
			Average	**42.31**	

1. Gallons per day (gpd) per net acre values are from Water System Master Plan Table 3.4 column entitled: Recommended Factor (Consistent with 2015 UWMP) (Akel, 2017). Used Residential Detached Medium, Residential Attached Low, and Residential Attached Medium factors.
2. 0.20 AFY/unit for single family homes and 0.18 AFY/unit values from Paso Robles 2015 UWMP.

3. Estimated water use for clubhouse with kitchenette, restrooms and pool extrapolated from other similar recreational/spa centers.
4. Irrigated area and demand is Estimated Total Water Use (ETWU) from City's Water Efficiency Checklist (Dividend Homes, 2020) and from sheet L-12 of The Crosswinds at Morgan Hill Full Submittal Drawings and Tentative Tract Map (June 8, 2020).

CITY OF MORGAN HILL WATER DEMAND

This section summarizes water demands for the City of Morgan Hill. It includes discussion of factors that affect total water demand including climate, population, and mix of customer types such as residential, commercial, industrial, and irrigation. A comparison of Project water demand projections to 2015 UWMP demand projections occurs at the end of this section.

Climate and Population

Climate has a notable influence on water availability and demand on a seasonal and annual basis. During drought, influences include greater water demand for outdoor uses, specifically landscape irrigation, and less supply availability because of reduced precipitation and greater evaporation. The City has a temperate climate, characterized by dry summers and wet winters with average annual maximum and minimum temperatures of 74- and 46-degrees Fahrenheit, respectively. Reflecting this pattern, water demand in the City is greater in the summer than in the winter. Average annual rainfall is about 20 inches. The average annual ET deficit of 51 inches generally represents the amount of irrigation water needed to supplement the rainfall and maintain turf areas.

Climate change may affect future water supply availability for the City of Morgan Hill by increasing temperatures, changing local precipitation patterns with less rain in the winter months and more rain in the spring months, longer summers, and increasing water demands.

The City relies solely on groundwater for its water supply. The groundwater is managed by the Santa Clara Valley Water District (Valley Water). Valley Water is actively managing County supplies through programs such as recharge, conjunctive use, and conservation. Valley Water is developing a Climate Change Action Plan (CCAP) that will identify potential future climate change vulnerabilities and risks to all core service areas (including water supply and groundwater management) and will provide goals and strategies to reduce risks (SCVWD, 2020).

City population, a key factor in water demand, was evaluated in the 2015 UWMP. Between 2015 and 2040, the City's population is anticipated to increase by about 19,218 persons, a 45 percent increase. In response to past rapid growth, the City initiated a Residential Development Control System to regulate growth by limiting the number of new homes approved per year. As a result, the 2040 population estimate of 61,600 is a function of the maximum number of housing allotments and is a ceiling and not a target (Akel, 2016).

City's Current and Projected Water Demands

The City's current and projected water demands are shown in **Table 3,** as documented in the 2015 UWMP. In 2015, total water use, including unaccounted-for water was 5,846 AFY. Note that in 2015, City and State mandatory water use restrictions were in place in response to drought conditions but have since been lifted. Consequently, 2015 demands are lower than what would be expected under normal conditions. Total water use is anticipated to increase to 10,972 AFY by 2040. These projections are generally based on the population projections and the City's 2020 urban water use target of 159 gpcd (61,600 (2040 population) x 159 gpcd = 10,972 AFY).

Approximately 59 percent of the City's total water use is projected to be consumed by single-family residential customers. Multi-family residential customers will use about 10.8 percent and commercial/industrial/institutional customers will use about 9.8 percent. Landscape irrigation is estimated to consume about 19.8 percent of the potable demand between 2020 and 2040.

Table 3. City of Morgan Hill Current and Projected Water Use (AFY)

Customer Type	Current	Projected				
	2015	2020	2025	2030	2035	2040
Single-Family Residential	3,206	5,096	5,457	5,818	6,179	6,540
Multi-Family Residential	581	924	990	1,055	1,120	1,186
Commercial, Industrial and Institutional	527	838	898	957	1,016	1,076
Landscape	1,064	1,691	1,811	1,931	2,051	2,170
Losses	467	assumed incorporated into above demands				
Total Additional Water Uses and Losses	**5,846**	**8,549**	**9,155**	**9,760**	**10,366**	**10,972**

From City's UWMP Table 4-2 and 4-4 (Akel, 2016)

Project Demands Compared to City UWMP Projected Demands

As mentioned previously, water use projections in the 2015 UWMP were based on population projections set forth in the City's 2016 General Plan Update[1] and on the City's 2020 urban water use target of 159 gpcd. This section compares 2015 UWMP population and water demand projections to those of the Project to determine if Project demands are included in the UWMP planning projections.

The population increase associated with the Project can be estimated assuming that each of the 269 units will have an average of 3 occupants[2] resulting in 807 new residents associated with the Project. This increase is well within the UWMP population increase of 3,400 anticipated to occur between 2020 and 2025.

1. The 2035 General Plan Update (adopted July 27, 2016) has a 2035 population of 58,200. It appears that the 2015 UWMP linearly projected population growth to 2040.
2. People per dwelling unit derived from information in Table 4-3A of 2015 UWMP (Akel, 2016).

A similar comparison can be made between estimated Project demands at buildout and UWMP demand increases. Project water demand is projected to be about 42.31 AFY at buildout (**Table 2**). **Table 3** shows that the UWMP-projected increase in single family demands would be 1,444 AFY between 2020 and 2040 and that multi-family demands would increase 262 AFY between 2020 and 2040. The Project would use about 2.5 percent (42.31/(1,444 + 262) of the 2015 UWMP-allotted single family plus multi-family growth in terms of demand.

The Project demands are within the UWMP water demand projection increases for residential water use sectors (2020 to 2040) (**Table 3**). Therefore, it is assumed that The Crosswinds at Morgan Hill Project water demands have been included in the 2015 UWMP projections. Note that this WSA does not address the ability of the City's water system to actually deliver water to the Project.

The City performs water supply and demand analysis on a five-year cycle as required by the State of California Department of Water Resources and as described in the City's UWMPs. The next UWMP is to be completed by July 1, 2021. UWMPs support the City's long-term resource planning to ensure that adequate water supplies are available to meet existing and future water needs.

CITY OF MORGAN HILL WATER SUPPLY

Water supply for the City of Morgan Hill is solely from groundwater. There are currently 15 active municipal groundwater wells located throughout the central and northern portions of the City that have a firm total capacity[3] of about 19,000 AFY (Akel, 2017 and City of Morgan Hill, 2019). The City has two other inactive wells that are permanently out of service.

The City pumps groundwater from two groundwater basins: the Santa Clara Valley Basin and the Gilroy-Hollister Valley Basin, with Cochrane Road coinciding approximately with the boundary between these two basins. The northern portion of the City overlies the Santa Clara Subbasin (DWR #2-009.02) in the Santa Clara Valley Basin while the southern portion of the City overlies the Llagas Subbasin (DWR basin 3-003.01) in the Gilroy-Hollister Valley Basin (**Figure 1**). The Santa Clara Subbasin has been divided into two areas for management purposes: the Coyote Valley Subarea and the Santa Clara Plain Subarea. The City overlies the Coyote Valley Subarea and has 3 active municipal wells in the Coyote Valley Subarea and 12 active wells in the Llagas Subbasin. The Santa Clara and Llagas subbasins are not adjudicated.

Santa Clara Subbasin

The Santa Clara Subbasin is a northwest trending valley that extends from the northern border of Santa Clara County to a groundwater divide near the City of Morgan Hill. It has a surface area of about 297 square miles and is bounded by the Santa Cruz Mountains to the west and the Diablo Range to the east (SCVWD, 2016). Groundwater north of the

3. Firm total capacity assumes the largest well is out of service.

groundwater divide near Cochrane Road flows north and northwest to San Francisco Bay while groundwater to the south flows southeast in the Llagas Subbasin toward the Pajaro River, at the boundary of San Benito County, and ultimately to Monterey Bay. The groundwater divide location moves north or south as much as one mile depending upon local groundwater conditions (SVCWD, 2016). The Coyote Valley Subarea is in the southern portion of the Santa Clara Subbasin and is about 7 miles long and 2 miles wide.

The Santa Clara Subbasin consists of Quaternary alluvium deposits of unconsolidated gravel, sand, silt and clay that eroded from adjacent mountain ranges. It contains interfingering alluvial fans, stream deposits and terrace deposits. The slightly or semi-consolidated alluvial deposits of the Santa Clara Formation underlie the unconsolidated young alluvial sediments in some areas of the Santa Clara Subbasin.

The Santa Clara Plain extends from Santa Clara County's northern boundary to approximately Metcalf Road in Coyote Valley. Its thickness ranges from 150 feet near Coyote Narrows/Metcalf Road to over 1,500 feet in the interior of the Subarea and thins towards the western and eastern edges. A shallow aquifer zone occurs within 150 feet of ground surface and a 20 to 100-foot-thick aquitard separates the shallow aquifer from a lower, principal aquifer zones forming a confined area in the central portion of the Subarea. Most of the wells tap the lower zone which exists at depths between 200 and 1,000 feet (SCVWD, 2016).

The Coyote Valley Subarea consists of thick alluvial sand and gravel deposits with interbedded thin, discontinuous clays and has no laterally extensive aquitard. The aquifer sediments overlying the Santa Clara Formation vary in thickness from a few feet along the west side of the valley to more than 400 feet along the east side (SCVWD, 2016).

Recharge occurs along the edges and southern portion of the Santa Clara Subbasin. This recharge contributes to the recharge of principal aquifers in the confined area through subsurface flow (SCVWD, 2016). Groundwater generally flows toward the north or northwest, following surface topography and on a local scale, flows toward areas of high pumping.

The Santa Clara Subbasin groundwater is generally of good quality and does not need treatment beyond disinfection (SCVWD, 2016). Santa Clara Plain groundwater quality is typically very good with only infrequent detections above health-based levels. Coyote Valley groundwater is typically good quality with the exception of elevated nitrate concentrations in some areas. Nitrate concentrations in the Coyote Valley are from fertilizers and septic systems in this more rural and agricultural-based Subarea (SCVWD, 2016).

Llagas Subbasin

The Llagas Subbasin is a northwest-trending, elongated valley in the southern part of Santa Clara County. It is the northern part of the Gilroy-Hollister Groundwater Basin and is bounded by the Santa Cruz Mountains to the west and the Diablo Range to the east. The Llagas Subbasin is about 15 miles long and 3 to 6 miles wide with a surface area of 88 square miles (SCVWD, 2016).

Like the Santa Clara Subbasin, it consists of Quaternary alluvium deposits of unconsolidated gravel, sand, silt and clay that eroded from adjacent mountain ranges and has interfingering alluvial fans, stream deposits and terrace deposits. The Llagas Subbasin thickness ranges from about 500 feet in the north to over 1,000 feet beneath the Pajaro River (SCVWD, 2016). Confined conditions exist in the central and southern portions of the Subbasin.

Recharge occurs along the northern, western, and eastern edges of the Subbasin. Groundwater generally flows south, toward the Pajaro River, following surface topography and on a local scale, flows toward areas of high pumping.

Llagas Subbasin groundwater is generally of good quality with the exception of localized elevated nitrate and perchlorate detections (SCVWD, 2016). The most significant single environmental release in the Llagas Subbasin was the perchlorate contamination associated with the Olin site[4]. The site has been undergoing remediation since 2004 and the plume has diminished significantly to an area mostly south of Tennant Avenue.

Groundwater Management

The Santa Clara Valley Water District (SCVWD or Valley Water) is the Groundwater Sustainability Agency for the Santa Clara and Llagas subbasins in accordance with the Sustainable Groundwater Management Act (SGMA).

SGMA became effective on January 1, 2015 and provides a framework for sustainable management of groundwater resources by local agencies. The Santa Clara and the Llagas subbasins are on the following timeline because they were designated as high priority basins but are not overdrafted:

- Local agencies must form local groundwater sustainability agencies (GSAs) by 2017
- GSAs must prepare and adopt groundwater sustainability plans (GSPs) by 2022; and
- Once GSPs are adopted, GSAs must implement them and achieve sustainability within 20 years.

Based on its long history of sustainable management, Valley Water submitted an Alternative Groundwater Sustainability Plan to California's Department of Water Resources (DWR) to fulfill its SGMA requirements. This alternative, entitled 2016 Groundwater Management Plan (GWMP) was submitted in 2016 (SCVWD, 2016). In accordance with SGMA, 2017 and 2018 Water Year[5] Reports also have been prepared that provide information on groundwater conditions and management activities to maintain the long-term viability of groundwater resources in the Santa Clara and Llagas subbasins. Valley Water also produces calendar-year based information on groundwater levels, storage, land subsidence and groundwater quality conditions.

4. Todd Engineers and Kennedy/Jenks Consultants, Groundwater Vulnerability Study, prepared for SCVWD, September 2009.

5. A water year extends from October 1 of the previous year to September 30. For example, water year 2018 is from October 1, 2017 to September 30, 2018.

The 2019 Water Year Report (SCVWD, 2020) concluded the following:

- Having previously fully recovered to pre-drought conditions, groundwater elevation and storage remained in healthy condition through Water Year (WY) 2019.
- WY 2019 was a wet year and adequate surface water supplies were available to support a full managed recharge program with 81,400 AF of local and imported surface water used for groundwater replenishment.
- Treated water delivered by Valley Water (103,000 AF) and recycled water use (17,100 AF) also provided in-lieu recharge, and countywide water conservation programs reduced water demands by more than 70,000 AF.
- This comprehensive recharge continues to support a balanced long-term water budget.
- In WY 2019, inflows exceeded outflows in the Santa Clara and Llagas subbasins, resulting in a net increase in storage of 11,400 and 6,600 AF, respectively.
- Valley Water continues to implement the comprehensive activities described in the GWMP (SCVWD, 2016). These include:
    - Maintain existing conjunctive water management programs and evaluate opportunities for enhancement or increased efficiency.
    - Continue to aggressively protect groundwater quality through Valley Water programs and collaboration with land use agencies, regulatory agencies, and basin stakeholders.
    - Continue to incorporate groundwater sustainability planning in Valley Water planning efforts.
    - Maintain adequate monitoring programs and modeling tools.
    - Continue and enhance groundwater management partnerships with water retailers and land use agencies.
    - Evaluate the potential new authorities provided by SGMA.

Tables 4 and **5** on the next page are from the 2019 Water Year Report (SCVWD, 2020) and summarize WY 2019 groundwater pumping and total water use. Most water use in the Santa Clara Subbasin is for municipal and industrial use while most water use in the Llagas Subbasin is for agricultural purposes. Imported water is a large component of supply in the Santa Clara Subbasin.

Table 4. Groundwater Pumping by Water Use in Water Year 2019

Water Use Sector	Measurement Method	Santa Clara Subbasin (AFY)	Llagas Subbasin (AFY)	Total Pumping (AFY)
M&I	Metered	61,600	16,400	78,000
	Estimated	1,500	600	2,100
Domestic	Metered	100	200	300
	Estimated	400	1,700	2,100
Agricultural	Metered	2,700	16,900	19,600
	Estimated	900	6,600	7,500
Total		**67,200**	**42,400**	**109,600**

From Table 1 in 2019 WY Report (SCVWD, 2020)

Table 5. Santa Clara County Total Water Use in Water Year 2019

Water Use (AFY)	Santa Clara Subbasin	Llagas Subbasin	Total	Measurement Method	Source	Sector
Groundwater Pumped	67,200	42,400	109,600	Metered (89%) and estimated	Natural recharge, managed recharge of local runoff and imported (SWP/CVP) water	M&I, domestic and agricultural
Valley Water Treated Water	103,000	0	103,000	Metered	Local runoff and imported (SWP/CVP) water	M&I
Valley Water Raw Surface Water Deliveries	700	1,300	2,000	Metered (95%) and estimated	Local runoff and imported (SWP/CVP) water	M&I, domestic and agricultural
SFPUC Supplies to Local Retailers	43,300	0	43,300	Metered	Surface water reservoirs	M&I
Recycled Water	15,200	1,900	17,100	Metered	Treated wastewater	M&I and agricultural
Total	**229,400**	**45,600**	**275,000**			

From Table 2 in 2019 WY Report (SCVWD, 2020)

Groundwater Use and Supply

Table 6 lists Morgan Hill's annual groundwater use between 2011 and 2018. About 80 percent of the City's supplies are from the Llagas Subbasin. Groundwater use declined in 2015, reflecting State-wide water use restrictions in response to the drought but rebounded in recent years.

Table 6. City of Morgan Hill 2011 to 2018 Groundwater Use (AFY)

Groundwater Source	2011	2012	2013	2014	2015	2016	2017	2018
Llagas Subbasin of the Gilroy-Hollister Groundwater Basin	6,076	6,203	7,454	6,195	4,741	4,480	5,155	5,832
Santa Clara Subbasin, Coyote Valley Subarea of the Santa Clara Valley Groundwater Basin	1,381	1,374	1,484	1,300	1,105	1,800	1,942	1,449
Total	**7,457**	**7,577**	**8,938**	**7,495**	**5,846**	**6,280**	**7,097**	**7,281**

From 2015 UWMP Table 6-1 (Akel, 2016) and Morgan Hill (2019)

Table 7 lists projected supplies to 2040 as documented in the UWMP. It includes natural recharge to the Llagas and Santa Clara subbasins (22,500 AFY and 2,400 AFY, respectively) as well as recharged imported water and recycled water (39,000 AFY to 48,500 AFY). These other water supplies were included in the 2015 UWMP (Akel, 2016) for completeness of the Llagas and Coyote Valley groundwater budgets. While the City of Morgan Hill does not directly contract with Valley Water for water supplies, it is dependent upon the additional water that Valley Water provides for recharge or to offset pumping in the Llagas and Santa Clara subbasins.

Table 7. City of Morgan Hill Projected Supply (AFY)

Water Supply Source	Projected				
	2020	2025	2030	2035	2040
Llagas Subbasin (Natural Recharge)	22,500	22,500	22,500	22,500	22,500
Santa Clara Valley Subbasin (Natural Recharge)	2,400	2,400	2,400	2,400	2,400
Other[1]	39,000	42,900	46,600	48,400	48,500
TOTAL	**63,900**	**67,800**	**71,500**	**73,300**	**73,400**

From 2015 UWMP Table 6-9 (Akel, 2016)

1. Other includes raw water and local surface water deliveries that are managed and negotiated by Valley Water for recharge in the Llagas Subbasin and Coyote Valley Subarea. It also includes City of Gilroy recycled water demand, which offsets pumping from the Llagas Subbasin.

COMPARISON OF SUPPLY AND DEMAND

To determine water supply sufficiency, a comparison of supply and demand during normal, single dry and multiple dry years during a 20-year projection was conducted. Based on the City's 2015 UWMP, **Table 8** summarizes water supply and demand for the City in a normal year, while **Tables 9** and **10** show supply and demand in single-year and multi-year dry conditions. On an annual basis, the City has been able to provide sufficient supplies to meet demand during normal, single-dry, and multiple-dry year periods.

Review of **Tables 8**, **9**, and **10** shows that water supply will decrease in times of drought, reflecting less natural recharge but demands were assumed to remain the same. If a severe drought occurs, the City could impose water use restrictions that could temporarily reduce water use to per capita levels similar to those in 2015 (123 gpcd). For comparison, the UWMP assumed projections based on a 159 gpcd use.

The Project site buildout water demands of 42.31 AFY (**Table 2**) are within the UWMP projections and thus considered to be included in the demand components of the 2015 UWMP summary tables listed below.

Table 8. Normal Year Supply and Demand Comparison (AFY)

	2020	2025	2030	2035	2040
Supply Totals	63,900	67,800	71,500	73,300	73,400
Demand Totals	8,549	9,155	9,760	10,366	10,972
Difference	55,351	58,645	61,740	62,934	62,428

From 2015 UWMP, Table 7-2 (Akel, 2016) and errata sheet (revised data available on DWR website)

Table 9. Single Dry Year Supply and Demand Comparison (AFY)

	2020	2025	2030	2035	2040
Supply Totals	60,705	60,705	60,705	60,705	60,705
Demand Totals	8,549	9,155	9,760	10,366	10,972
Difference	52,156	51,550	50,945	50,339	49,733

From 2015 UWMP, Table 7-3 (Akel, 2016) and errata sheet (revised data available on DWR website)

Demand Totals	8,549	9,155	9,760	10,366	10,972
Difference	32,986	32,380	31,775	31,169	30,563

From 2015 UWMP, Table 7-4 (Akel, 2016) and errata sheet (revised data available on DWR website)

Note that the groundwater supply amounts listed in **Tables 8**, **9**, and **10** are a shared resource managed by Valley Water through the SGMA process. The 2015 UWMP also included tables listing projected supplies and demands for the entire Llagas Subbasin and for the entire Coyote Valley Subarea using data that Valley Water provided to the City in mid-2016. These tables are shown in **Appendix A**. DWR requested that only City demands be included in these tables and the modified tables are the ones shown above.

Those subbasin or subarea-wide supply and demand comparisons in the 2015 UWMP indicated potential deficits, especially in multi-year droughts (see **Appendix A**). These deficits could be as high as 32,533 AF in the third year of a severe drought (see **Appendix A** Table 7-4). However, more recently, the 2019 Water Year Report (SCVWD, 2020) concluded that Valley Water's comprehensive recharge continues to support balanced long-term water budgets for these two subbasins.

As discussed above, Valley District continues to implement its groundwater sustainability program to maintain the long-term viability of groundwater resources.

CONCLUSIONS

The findings of this water supply and demand evaluation are summarized below.

- The Crosswinds at Morgan Hill Project will be built on a 33-acre site. Currently, one residence and a containerized tree nursery occupy the site.
- The Project will consist of 269 residential units (56 single family, 64 duet, and 149 condominium units) and a recreational center.
- The City of Morgan Hill will supply the Project with potable water. Groundwater is the only source of supply to the City.
- Current site water usage averages about 18.54 AFY.
- Once completed, the Project will use an estimated 42.31 AFY of water resulting in a net increase of groundwater use of about 41.67~~23.77~~ AFY.
- Water supply needed to serve the Project's water demand can be considered as included in the 2015 UWMP projections.
- The City's sole source of supply, groundwater from the Llagas and Santa Clara subbasins, is a shared resource managed by Valley Water through the SGMA process. The 2019 Water Year Report (SCVWD, 2020) for SGMA reporting concluded that Valley Water's comprehensive recharge continues to support a balanced long-term water budgets for these two subbasins.

In conclusion:

The City's water supply is from groundwater, which is a shared resource. The ongoing, active management of the Llagas and Santa Clara subbasins by Valley Water through the SGMA process and its strong partnership with large groundwater pumpers, including the City of Morgan Hill, is expected to result in continued sustainable groundwater management in the future resulting in a reliable long-term water supply for the Project.

Executive Summary

This report presents the results of the transportation analysis (TA) conducted for the proposed Crosswinds residential development in Morgan Hill, California. The 30.5-acre project site is currently vacant and is generally bounded by Half Road to the south, Mission View Drive to the east, future extension of DePaul Drive to the west, and Avenida De Los Padres to the north. The project as proposed will consist of a total of 269 residential units comprised of 149 condos, 56 detached single-family, and 64 duet units. The project would include the extension of DePaul Drive to the south with termination as a cul-de-sac just north of Half Road. Access to the project site would be provided via a full access driveway along Mission View Drive and two full access driveways along the future DePaul Drive extension.

Transportation Analysis Scope

The TA consists of a California Environmental Quality Act (CEQA) required vehicle-miles-traveled (VMT) analysis and a supplemental traffic operations analysis that demonstrates the project's consistency with the *Morgan Hill 2035 General Plan* goals and policies.

CEQA Transportation Analysis Scope

The CEQA VMT impact analysis was completed using the Valley Transportation Authority's (VTA) VMT tool. The City of Morgan Hill is currently developing the framework for new transportation policies based on VMT as the primary measure of transportation impacts. The new policies will replace the City's current transportation policies that are based on levels of service per the Morgan Hill 2035 General Plan. However, since the City has not formally adopted its own city-specific VMT policies, this study utilizes VMT analysis methodology and impact thresholds recommended in the Governor's Office of Planning and Research (OPR) *Technical Advisory on Evaluating Transportation Impacts in CEQA*, December 2018.

Traffic Operations Analysis Scope

The current General Plan, *Morgan Hill 2035 General Plan,* adopted in July 2016 uses Level of Service (LOS) as its primary metric for the evaluation of the projected operation of the City's roadway system. Therefore, a traffic operations analysis based upon peak hour intersection level of service analysis is included for consistency with the General Plan goals and policies. The traffic operations analysis supplements the CEQA required VMT analysis. However, the determination of project impacts per CEQA requirements is based solely on the VMT analysis.

CEQA VMT Analysis

The results of the VMT analysis using the VTA's VMT Evaluation Tool indicate that the existing VMT for residential uses in the project vicinity is 30.46 VMT per capita.

The results also indicate that the project is projected to generate VMT per capita (27.41), which would exceed the OPR's recommended impact threshold of 20.94 VMT per capita. Therefore, the project would result in an impact on the transportation system based on OPR's VMT impact criteria.

VMT Impacts and Mitigation

Using OPR's impact thresholds, the project would need to implement VMT reduction measures to achieve a 24% reduction (27.41 to 20.94) in its VMT per capita for the proposed residential uses to reduce its impact to less than significant levels. However, a maximum 11% reduction in project VMT is possible regardless of the extent of VMT reduction measures implemented.

OPR's recommended 15% below existing VMT impact threshold encourages developments in transit-rich, highly mixed-use areas to implement design features and trip reduction measures to take advantage of existing multi-model infrastructure and land use mixes in reducing trip making and/or trip lengths. However, many communities such as Morgan Hill have very limited multi-modal transportation infrastructure and lack a mix of complementary land uses. The lack of employment in these communities along with minimal transit options results in a greater number and longer commute trips. Therefore, it is highly unlikely that developments like the proposed project in these cities can achieve OPR's recommended 15% reduction in VMT. Therefore, absent of the City adopting its own City-specific VMT policies and impact thresholds, the proposed project's VMT impact must be deemed significant and unavoidable.

Per its condition of approval and prior to project occupancy, ~~the City will however require that the project~~the project applicant shall develop and implement a Transportation Demand Management (TDM) plan which targets a reduction in residential vehicle trips to and from the site. The TDM plan shall be prepared by a qualified traffic consultant and in coordination with the City of Morgan Hill Development Services Director or Designee. The TDM plan shall quantify the reduction in VMT. The TDM shall require the following measures: ~~implement and/or incorporate in its design the following VMT reduction measures to encourage the use of multi-modal travel and reduce the number and length of vehicular trips:~~

1. Prior to project occupancy, the project applicant will be required to make a financial contribution to the City's on-site demand rideshare service (MoGo), as a one-time or annual financial contribution based on City approval, **or**
2. During project operation, t~~T~~he management entity/HOA shall provide fully (100 percent) subsidized annual VTA transit passes for all project homeowners (a maximum of one transit subsidy per residential unit, which would result in up to 269 transit passes per year). This subsidized transit program shall be approved by the City of Morgan Hill's Public Services Director prior to issuance of occupancy.
3. The project must improve the surrounding pedestrian network by including sidewalks which terminate at the common property line, allowing for connections to the adjacent property in the event there is development in the future. Continuous sidewalks are proposed along the project frontages. The proposed frontage improvements along Mission View Drive, Half Road, and De Paul Drive include sidewalk improvements; each of the street sections will be wide enough to accommodate future bicycle lanes.
4. The proposed development will include 64 bicycle parking spaces.

Traffic Operations Analysis

Project Trip Generation

Based on the recommended rates for single-family detached housing (Land Use #210) and the size of the proposed project, it is estimated that the proposed project would generate 2,539 daily trips, with 199 trips (50 inbound and 149 outbound) occurring during the AM peak hour and 266 trips (168 inbound and 98 outbound) occurring during the PM peak hour.

Intersection Operations Analyses

The results of the traffic operations analysis indicate that based on the City's operating standards, the proposed project would have an adverse effect on intersection operations at the following four study intersections under Year 2030 Cumulative with project conditions.

6. Mission View Drive and Cochrane Road (AM & PM Peak Hours)
8. Mission View Drive and Half Road (unsignalized) (AM & PM Peak Hours)
9. Condit Road and Main Avenue (PM Peak Hour)
10. Condit Road and Diana Avenue (unsignalized) (AM Peak Hour)

Adverse Intersection Operations Effects and Potential Improvements

The adverse intersection operation effects identified under Year 2030 Cumulative with project conditions are discussed below. Included are descriptions of the adverse effects on intersection operations and potential improvement measures that may be included as part of the project's Conditions of Approval. However, the identified roadway operations and improvements are not required or considered project impacts per CEQA guidelines.

6. Cochrane Road and Mission View Drive

This intersection is projected to operate at an unacceptable LOS F and E during the AM and PM peak hours, respectively, under Year 2030 Cumulative without project conditions. Traffic associated with the proposed project would cause the critical delay to increase by more than four seconds and the volume-to-capacity ratio (V/C) to increase by more than 0.01 during both the AM and PM peak hours. This constitutes an adverse effect on intersection operations based on the City of Morgan Hill's level of service standards.

The addition of a second northbound left-turn lane on Mission View Drive and a cycle length adjustment would be necessary to improve intersection operations. The addition of the second northbound left-turn lane will require lane striping and signal modification but will fit within the existing curb-to-curb pavement width on Mission View Drive. Implementation of this improvement would improve the intersection's level of service to LOS C during both the AM and PM peak hours under Year 2030 Cumulative with project conditions.

8. Mission View Drive and Half Road

This intersection is projected to operate at an unacceptable LOS F during the PM peak hour under Year 2030 Cumulative without and with project conditions. Furthermore, this intersection is projected to operate at an acceptable LOS D during the AM peak hour under Year 2030 Cumulative without conditions and degrade to LOS E with the addition of project traffic. Additionally, the peak-hour traffic signal warrant checks indicate that the intersection would have traffic volumes that meet thresholds that warrant signalization during both the AM and PM peak hours under Year 2030

Cumulative without and with project conditions. This constitutes an adverse effect on intersection operations based on the City of Morgan Hill's level of service standards.

The signalization of the intersection would be necessary to improve intersection operations. Implementation of a traffic signal at this location would improve the level of service to LOS C during both the AM and PM peak hours under Year 2030 Cumulative with project. This intersection is under the jurisdiction of both the City of Morgan Hill and Santa Clara County. Therefore, implementation of the recommended improvements will require City and County approval.

9. Main Avenue and Condit Road

This intersection is projected to operate at an unacceptable LOS F during the PM peak hour under Year 2030 Cumulative without project conditions. Traffic associated with the proposed project would cause the critical delay to increase by more than four seconds and the volume-to-capacity ratio (V/C) to increase by more than 0.01 during the PM peak hour. This constitutes an adverse effect on intersection operations based on the City of Morgan Hill's level of service standards.

The addition of an exclusive southbound right-turn lane on Condit Road would be necessary to improve intersection operations. The addition of the right-turn lane will require signal modifications and lane striping on the southbound approach. Implementation of this improvement would improve the intersection's level of service to LOS D during the PM peak hour under Year 2030 Cumulative with project conditions. This intersection is under the jurisdiction of both the City of Morgan Hill and Santa Clara County. Therefore, implementation of the recommended improvements will require City and County approval.

10. Condit Road and Diana Avenue

This intersection is projected to operate at an unacceptable LOS E during the AM peak hour under Year 2030 Cumulative without and with project conditions. Additionally, the peak-hour traffic signal warrant checks indicate that the intersection would have traffic volumes that meet thresholds that warrant signalization during the AM peak hour under Year 2030 Cumulative without and with project conditions. This constitutes an adverse effect on intersection operations based on the City of Morgan Hill's level of service standards.

The signalization of the intersection would be necessary to improve intersection operations. Implementation of this improvement would improve the intersection's level of service to LOS B during the AM peak hour under Year 2030 Cumulative with project conditions.

Freeway Segment Level of Service Analysis

The results of the freeway segment level of service analysis indicate that ten directional mixed-flow lanes and one directional HOV lane on the freeway segments analyzed are projected to operate at an unacceptable LOS F during at least one peak hour under existing conditions and would continue to operate at LOS F conditions with the addition of traffic due to proposed project.

Improvement of freeway segment operations would require freeway widening to construct additional through lanes, thereby increasing freeway capacity. VTA's Valley Transportation Plan (VTP) 2040 identifies freeway express lane projects along US 101 between Cochrane Road and Whipple Avenue. The planned improvements consist of the conversion of the existing HOV lane to an express lane and the construction of a second express lane in each direction on US 101. These improvements would increase the capacity of the freeway and help to address the deficiency in freeway operations. However, it is not feasible for an individual development project to bear responsibility for implementing

such extensive transportation system improvements due to constraints in the acquisition and cost of right-of-way.

Other Transportation Issues

Site Access

The project would include the extension of DePaul Drive to the south with termination as a cul-de-sac just north of Half Road. Access to the project site would be provided via a full access driveway along Mission View Drive and two full access driveways along the DePaul Drive extension.

On-Site Circulation

An internal private street network would provide access to each of the residential units from the proposed entrances along Mission View Drive and DePaul Drive. Most of the streets that front homes include on-street parallel parking. The internal streets would provide continuous access to each area of residential units.

Travel way on street is typically a minimum of 26 feet. The travel way on the internal streets is shown to be at least 20 feet wide. The narrower travel width will provide adequate width for two-way travel on each of the streets and will promote reduced travel speeds within the site. However, the straight nature of the internal roadways could result in drivers traveling at greater speeds than recommended. Therefore, it may be desirable to implement speed-reducing measures along the internal roadways. These measures could include the installation of speed bumps/humps along the internal roadways and/or bulb-outs at intersections and mid-block.

The project site plan shows sidewalks along the project's frontages along Mission View Drive and DePaul Drive and the internal street network on-site. However, there are no sidewalks provided along the west side of Mission View Drive between the project site and Cochrane Road. In conjunction with the existing sidewalks along the east side of Mission View Drive, the proposed sidewalks on Mission View Drive along the project frontage would provide a connection between the project site and bus stops along Mission View Drive and pedestrian destinations along Cochrane Road. There also are no sidewalks along either side of DePaul Drive between the project site and Cochrane Road. Therefore, there will be no sidewalk connection between the project site and Cochrane Road.

The project site should be designed following City of Morgan Hill design standards and provide adequate width and turn-radii at and along all drive/parking aisles to allow for two-way circulation and adequate circulation of larger vehicles (such as emergency trucks, garbage truck, and delivery trucks) throughout the project site. Adhering to the City of Morgan Hill standards and requirements, and implementing the above recommendations, the proposed site access points and layout of the surface parking areas would be adequate to accommodate the circulation of both passenger and emergency vehicles.

Emergency Vehicle Access and Circulation

The 20-foot-wide internal roadway would provide emergency vehicles (fire trucks) sufficient space to access each of the residential units on-site. There are several dead-end drive aisles that would not provide sufficient space for emergency vehicles to turn around. However, the dead-ends will be located along short segments of roadways. Thus, vehicles would be able to back out of the roadways.

Intersection Operations Analysis

The queuing analysis also indicates that the maximum vehicle queue for northbound left-turn movement at the Cochrane Road and Mission View Drive intersection currently exceeds the provided turn pocket storage space during the AM and PM peak hours under existing conditions.

The addition of project traffic is not projected to lengthen the projected queue during the AM peak hour. However, the addition of project traffic is projected to lengthen the projected queue by one vehicle or 25 feet during the PM peak hour under existing plus project conditions, which would exceed the existing storage capacity by 75 feet.

Recommendation: The northbound left-turn pocket can be lengthened by 250 feet to accommodate the projected queue during the AM peak hour. However, a second northbound left-turn lane is recommended to improve intersection operations.

Project Driveway Operations

The results of the project driveway operations analysis indicate that all three project driveways are projected to operate at acceptable levels of service (LOS D or better) during each of the peak hours analyzed and to have traffic conditions that fall below the thresholds that warrant signalization. Additionally, the 95th percentile queues at the project driveways are projected to be at most 25 feet.

Recommendation: A center-striped median is currently provided along Mission View Drive north of the project site. The current width of Mission View Drive along the project frontage is not adequate to provide a left-turn pocket into the project driveway. Mission View Drive would need to be widened along its east side, opposite the project frontage, to provide a striped left-turn pocket into the project site. Similarly, left-turn lanes should be striped at the project driveways along DePaul Drive if a center-striped median is planned.

Sight Distance

Based on Caltrans requirements, the available sight distance at the project site driveways on DePaul Drive and Mission View Drive would be adequate.

Recommendation: The site design should ensure design features, in particular, the landscaping and signage along the project site frontage and at the project site driveways, would not interfere with the sight distance at the proposed site driveway.

Parking

Based on Tables 18.72-2 and 18.72-3 of Section 18.72.030 of the Morgan Hill City Code, the project would be required to provide 2 covered parking spaces per residential unit and one guest parking space is required for every four residential units. The project would be required to provide 538 resident and 68 guest parking spaces for the proposed 269 residential units. The project is proposing to provide two covered parking spaces for each residential unit for a total of 538 parking spaces and 271 on-street parking spaces within the internal street network. Therefore, the provided number of parking spaces would satisfy the City's parking requirement.

Transit, Pedestrian, and Bicycle Analysis

The project site is served by Local Route 87 with bus stops along Mission View Drive and Half Road. In addition, Express Route 168 also provides service along Cochrane Road west of US 101. These two bus routes provide a connection to the Morgan Hill Caltrain Station. A conservative mode split in

Morgan Hill would be a three percent transit share. Assuming up to three percent transit mode share for the project equates to no more than six and eight transit riders during the AM and PM peak hours, respectively.

VTA has recommended that a new bus stop for Route 87 be installed along Mission View Drive on the project frontage just south of the project entrance. VTA also has suggested a new bus stop be installed on the northbound side of Mission View Drive if a controlled crosswalk were to be installed at the project entrance along Mission view Drive. However, this analysis showed no need for signal control at the project entrance. It is recommended that the project coordinate with VTA to identify the specific placement of a new bus stop along Mission View Drive and allow for adequate space along its frontage on Mission View to accommodate the installation of a bus stop including wider sidewalks, lighting, landscaping, and passenger pad.

Sidewalks are provided along the east side of Mission View Drive and the north side of Cochrane Road in the immediate project area. However, sidewalks along the south side of Cochrane Road are intermittent, with no sidewalk currently provided between the US 101 northbound ramps and De Paul Drive, and a short segment west of Mission View Drive. The project would provide sidewalks along its entire frontages along Mission View Drive, Half Road, and DePaul Drive and result in a continuous connection to the existing sidewalks on the east side of Mission View Drive to provide a safe connection between the project site and other surrounding land uses in the area. Controlled crossings at the intersections of Cochrane Road with Mission View Drive and DePaul Drive would provide a connection between the project area and retail uses on the north side of Cochrane Road.

Bike lanes are currently provided along the entire lengths of Cochrane Road and Main Avenue. An unpaved bike path, the Madrone Channel Trail, runs along the east side of US 101, between Tennant Avenue and Cochrane Road. It is expected that bicycle trips would comprise no more than one percent of the total project-generated trips. Thus, the project could potentially generate no more than three new bicycle trips during each of the peak hours. The demand generated by the proposed project could be accommodated by the existing bicycle facilities in the vicinity of the project site.

Freeway Ramp Analysis

Freeway On-Ramp Queuing Analysis

The analysis indicates that project traffic would not lengthen the projected 15-minute interval queue lengths at either of the subject Cochrane Road on-ramps under existing plus project conditions. Short vehicle queues, less than 10 vehicles, currently occur at the ramps, however, the queues dissipate during the 15-minute intervals because the demand volume is less than the service rate of the freeway ramp meters.

The volumes on the northbound diagonal on-ramp from westbound Cochrane Road are projected to be greater than the service rate of the ramp meter during the AM peak hour under Year 2030 Cumulative with project conditions. Therefore, queues are projected to develop on the northbound diagonal on-ramp. Trips from the proposed project will result in an increase in the projected queue by two vehicles. However, the projected queues on the metered northbound diagonal on-ramp can be accommodated entirely on the ramp.

Freeway Off-Ramp Queuing Analysis

The results of the analysis show that the 95th percentile queue lengths at each of the US 101 off-ramps to Cochrane Road are projected to be accommodated entirely on the ramps and would not extend back and disrupt the freeway mainline.

1. Introduction

This report presents the results of the Transportation Analysis (TA) conducted for the proposed Crosswinds residential development in Morgan Hill, California. The 30.5-acre project site is currently vacant and is generally bounded by Half Road to the south, Mission View Drive to the east, future extension of DePaul Drive to the west, and Avenida De Los Padres to the north. The project as proposed will consist of a total of 269 residential units comprised of 149 condos, 56 detached single-family, and 64 duet units. The project would include the extension of DePaul Drive to the south with termination as a cul-de-sac just north of Half Road. Access to the project site would be provided via a full access driveway along Mission View Drive and two full access driveways along the future DePaul Drive extension. The project site location and the surrounding study area are shown in Figure 1. The project site plan is shown in Figure 2.

Scope of Study

The TA consists of a California Environmental Quality Act (CEQA) required vehicle-miles-traveled (VMT) analysis and a supplemental traffic operations analysis that demonstrates the project's consistency with the *Morgan Hill 2035 General Plan* goals and policies.

CEQA Transportation Analysis Scope

Historically, traffic impact analysis has focused on the identification of traffic impacts and potential roadway improvements based on delay to relieve traffic congestion that may result due to proposed/planned growth. However, with the adoption of Senate Bill (SB) 743 legislation, public agencies are required (effective July 2020) to base transportation impacts on Vehicle-Miles-Traveled (VMT) rather than level of service that typically uses delay as its metric. The change in measurement is intended to better evaluate the effects on the state's goals for climate change and multi-modal transportation. Therefore, to adhere to the state's legislation, all new development projects are required to analyze transportation impacts using the VMT metric.

The CEQA VMT impact analysis was completed using the Valley Transportation Authority's (VTA) VMT tool. The City of Morgan Hill is currently developing the framework for new transportation policies based on VMT as the primary measure of transportation impacts. The new policies will replace the City's current transportation policies that are based on levels of service per the Morgan Hill 2035 General Plan. However, since the City has not formally adopted its own city-specific VMT policies, this study utilizes VMT analysis methodology and impact thresholds recommended in the Governor's Office of

Figure 1
Site Location and Study Intersections

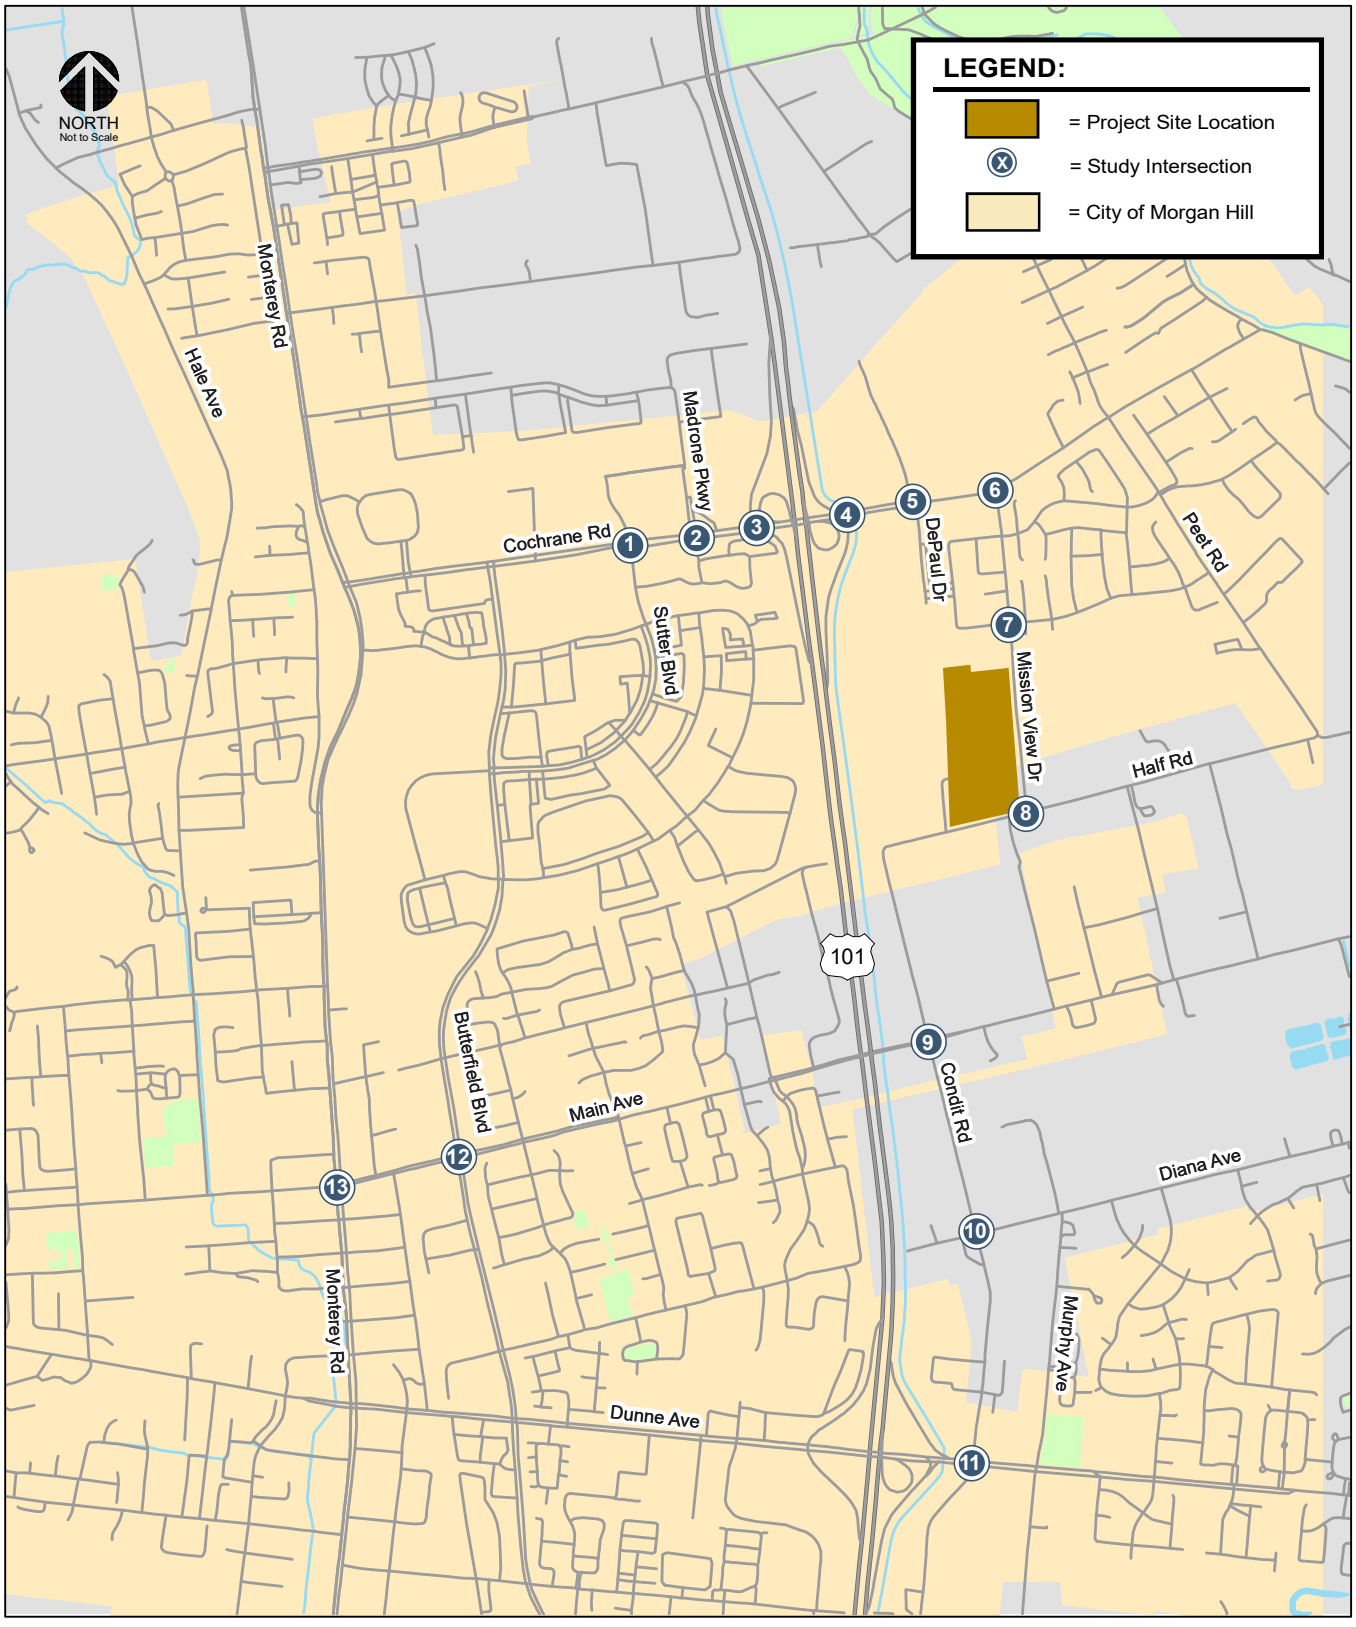

Figure 2
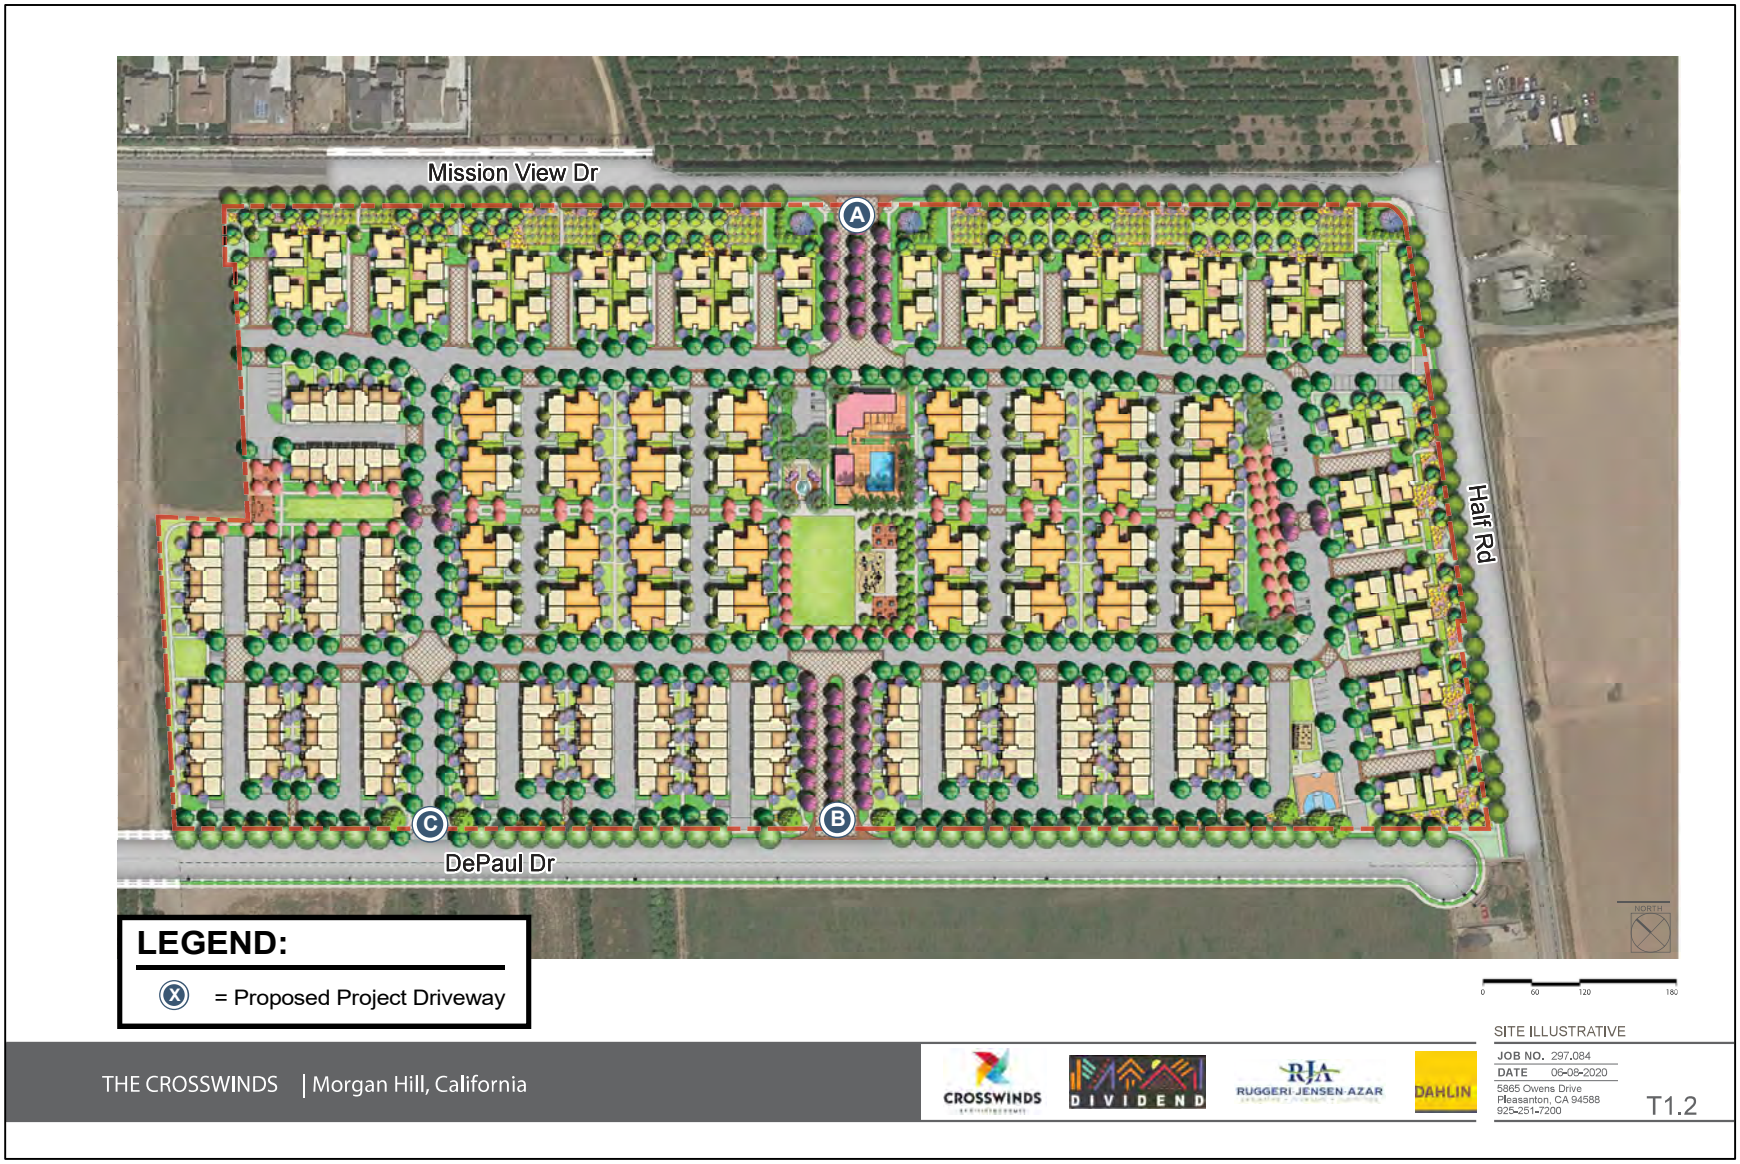
Project Site Plan



Planning and Research (OPR) Technical Advisory on Evaluating Transportation Impacts in CEQA, December 2018.

Traffic Operations Analysis Scope

The current General Plan, *Morgan Hill 2035 General Plan,* adopted in July 2016 uses Level of Service (LOS) as its primary metric for the evaluation of the projected operation of the City's roadway system. Therefore, a traffic operations analysis based upon peak hour intersection level of service analysis is included for consistency with the General Plan goals and policies. The traffic operations analysis supplements the CEQA required VMT analysis. However, the determination of project impacts per CEQA requirements is based solely on the VMT analysis.

The traffic operations analysis includes the evaluation of weekday AM and PM peak hour operations at selected intersections for the purpose of identifying operational issues (queuing, signal operations, and potential multi-modal issues) at intersections in the general vicinity of the project site. The traffic operations analysis also includes an evaluation of the effects of the project's on-site access, on-site circulation, and related safety elements in the immediate area of the project.

The effects of the proposed development on traffic operations on the surrounding roadway system were evaluated following the standards and methodologies set forth by the City of Morgan Hill in its *Guidelines for Preparation of Transportation Impact Reports*, February 2010, Morgan Hill 2035 General Plan, and the Santa Clara Valley Transportation Authority (VTA). The VTA administers the County Congestion Management Program (CMP).

Report Organization

The remainder of this report is divided into five chapters. Chapter 2 describes existing conditions in terms of the existing roadway network, transit service, and existing bicycle and pedestrian facilities. Chapter 3 presents the CEQA VMT analysis. Chapter 4 presents the traffic operations analysis and the project's effects on the transportation system and describes the recommended roadway improvements. Chapter 5 presents the analysis of other transportation-related issues, including site access. Chapter 6 presents the conclusions of the transportation analysis.

2. Existing Transportation System

This chapter describes the existing transportation system within the project area. It describes transportation facilities for all of the major transportation facilities in the vicinity of the site, including the roadway network, transit service, and bicycle and pedestrian facilities.

Existing Roadway Network

Regional access to the project site is provided via US 101. Local access to the site is provided by Cochrane Road, Dunne Avenue, DePaul Drive, Half Road, Mission View Drive, Main Avenue, and Condit Road. These facilities are described below.

US 101 is a north-south freeway extending northward to San Francisco and southward through Gilroy. US 101 is an eight-lane freeway (three mixed-flow lanes and one high-occupancy vehicle (HOV) lane in each direction) north of Cochrane Road. South of Cochrane Road, it is a six-lane freeway with no HOV lanes. Access to and from the project site is provided via its interchanges at Cochrane Road and Dunne Avenue.

Cochrane Road is an east-west divided roadway that runs from Monterey Road to Malaguerra Avenue, east of US 101. Currently, Cochrane Road is a four-lane road between Monterey Road and Sutter Boulevard. Between Sutter Boulevard and US 101, Cochrane Road widens to three lanes eastbound and two lanes westbound, then narrows back to four lanes east of US 101, and to two lanes east of Mission View Drive. Cochrane Road has posted speed limits of 40 and 45 miles per hour (mph). Access to the project site is provided via its intersections with DePaul Drive and Mission View Drive.

Dunne Avenue transverses the City extending from the east part of town to the west with a posted speed limit of 35 to 40 mph and sidewalks along both sides of the street. Bike lanes are found along both sides of Dunne Avenue between Peak Avenue and Gallop Drive (east of US 101). Access to the project site is provided via its intersection with Condit Road.

DePaul Drive is a north-south undivided roadway that intersects Cochrane Road approximately 700 feet east of the US-101 northbound ramps intersection and runs approximately 1,500 feet north and 1,000 feet south of Cochrane Road. DePaul Drive has a posted speed limit of 35 miles per hour (mph). The project proposes to extend DePaul Drive by approximately 2,280 feet south to provide direct

access to the project site via two full access driveways. As proposed, DePaul Drive would terminate as a cul-de-sac just north of Half Road.

Half Road is an east-west undivided roadway that runs from Condit Road to Cochrane Road. Half Road runs along the project's southern frontage and has a posted speed limit of 35 miles per hour (mph). However, Half Road would not provide direct access to the project site and would not intersect the proposed extension of DePaul Drive. Access to the project site is provided via its intersection with Mission View Drive.

Mission View Drive is a north-south two-lane undivided roadway that runs south from Eagle View Drive to Half Road. In the vicinity of the project site, Mission View Drive has a posted speed limit of 40 miles per hour (mph). Mission View Drive runs along the project's eastern frontage. Access to the project site would be provided via a full access driveway along Mission View Drive.

Main Avenue is a two-lane roadway that runs eastward from its intersection with DeWitt Avenue to Coyote Road at the base of the eastern foothills. The roadway has an overcrossing of US 101, however, no access to US 101 is provided. Access to the project site is provided via its intersection with Condit Road.

Condit Road is a two-lane north-south roadway that extends from Half Road southward to Tennant Avenue. The posted speed limit on Condit Road is 45 mph. Access to the project site is provided via its transition to Half Road.

Existing Bicycle and Pedestrian Facilities

As defined by the Valley Transportation Authority (VTA), bicycle facilities include Class I bikeways (defined as off-street bike paths, which are shared with pedestrians and excludes general motor vehicle traffic), Class II bikeways (defined as striped bike lanes on street), and rated streets. The latter refers to streets frequently used by bicyclists, sharing the roadway with motor vehicles, and includes city designated Class III bike routes. Rated streets include extreme caution (heavy traffic volumes with high traffic speeds), alert (moderate traffic volumes and speeds), and moderate (low traffic volumes and moderate to low traffic speeds). Class III bikeways only have signs to help guide bicyclists on recommended routes to certain locations.

In the project vicinity, bike lanes are currently provided along the extent of Cochrane Road and Main Avenue beginning at Live Oak High School and continuing west across US-101 to Peak Avenue. An unpaved bike path, the Madrone Channel Trail, runs along the east side of US 101, between Tennant Avenue and Cochrane Road.

The remaining bicycle facilities in the area are located west of US-101. Bike lanes are currently provided along the following roadways:

- Butterfield Boulevard, along its entire length;
- Sutter Boulevard, from Cochrane Road to Butterfield Boulevard;
- Monterey Road, nearly its entire length within City of Morgan Hill limits, with the exception of the segment that runs through downtown between Dunne Avenue and Main Avenue;
- Burnett Avenue, from Monterey Road to Bauman Court (west of US 101);
- Central Avenue, from Butterfield Boulevard to its termination point west of US 101;
- Dunne Avenue, from Peak Avenue to east of Hill Road;
- Depot Street, along its entire length;
- Peak Avenue, between Dunne Avenue and Wright Avenue;
- Murphy Avenue, between Dunne Avenue and Kelly Park Circle;

- Hale Avenue, between Main Avenue and north of the City of Morgan Hill.

Other bicycle facilities in the project vicinity include the following:

- A bike route on Monterey Road, between Dunne Avenue and Main Avenue;
- A paved bike path on the east side of Butterfield Boulevard, between San Pedro Avenue and Central Avenue.

The existing bicycle facilities in the study area are presented graphically in Figure 3.

Pedestrian facilities in the study areas consist primarily of sidewalks, pedestrian push buttons, marked crosswalks, and signal heads at signalized intersections. However, the project site is located within a primarily undeveloped area where continuous sidewalks along the surrounding streets are not available. Sidewalks are provided along at least one of the sides of the following roadways in the vicinity of the project site:

Cochrane Road – sidewalks are provided along the north side of the street between Butterfield Boulevard and White Moon Drive. Along the south side of the street, sidewalks are provided from Monterey Road to the east of Mission View Drive with the exception of the segments between Woodview Avenue and Sutter Boulevard, US 101 northbound ramps and DePaul Drive, and a short segment west of Mission View Drive.

Mission View Drive – sidewalks are provided along the east side of the street between the northern end of Mission View Drive (at Eagle View Drive) until approximately 950 feet north of its intersection with Half Road. There are no sidewalks along the west side of Mission View Drive, with the exception of curb ramps located at the northwest and southwest corners of the Mission View Drive and Cochrane Road intersection.

Sidewalks are not provided on either side of DePaul Drive south of Cochrane Road. All other streets in the immediate vicinity of the project site fronting undeveloped areas have no sidewalks.

Existing Transit Service

Existing transit service to the study area is provided by the VTA and Caltrain. The transit services are described below and shown in Figure 4.

VTA Bus Services

The study area is served directly by one local bus (Local Bus Route 87). In addition, Express Route 168 operates along Cochrane Road west of US 101.

Local Bus Route 87 operates on Cochrane Road, Mission View Drive, and Half Road in the study area. It runs from Burnett Avenue to the Civic Center (Main and Dewitt) in Morgan Hill with approximately 60-minute headways in the AM and PM commute periods. Route 87 operates between 6:30 AM and 5:45 PM. The nearest Route 87 bus stops to the project site are located near the Half Road/Elm Road and Mission View Drive/Avenida De Los Padres intersections.

Express Route 168 operates on Butterfield Boulevard and Cochrane Road on its route between the Gilroy Transit Center and the San Jose Diridon Transit Center. It operates northbound with 30- to 45-minute headways during the AM commute period only and southbound with 45-minute headways during the PM commute period only. The nearest Route 168 bus stops to the project site are located near the intersection of Cochrane Road and Sutter Boulevard, approximately ¾ miles west of the project site.

Figure 3
Existing Bicycle Facilities

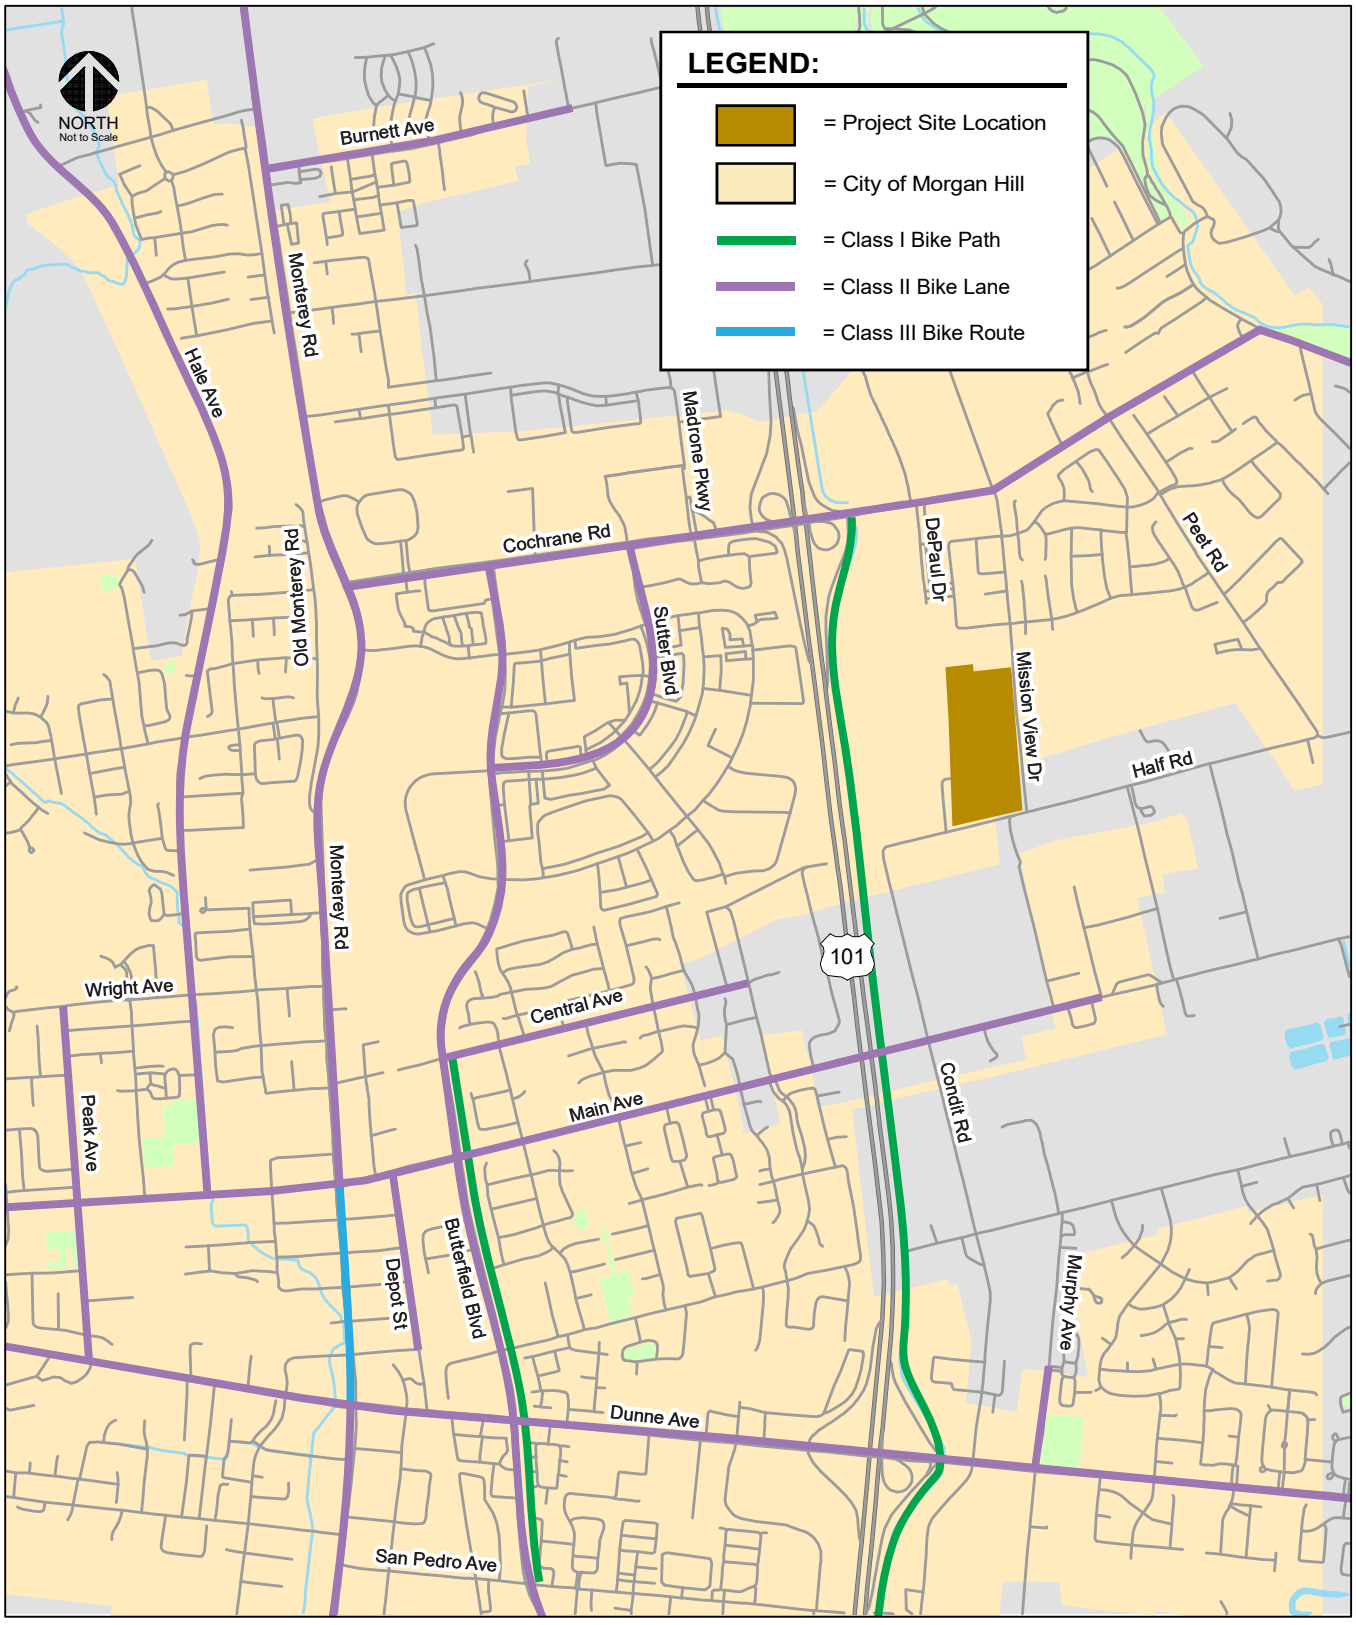


Figure 4
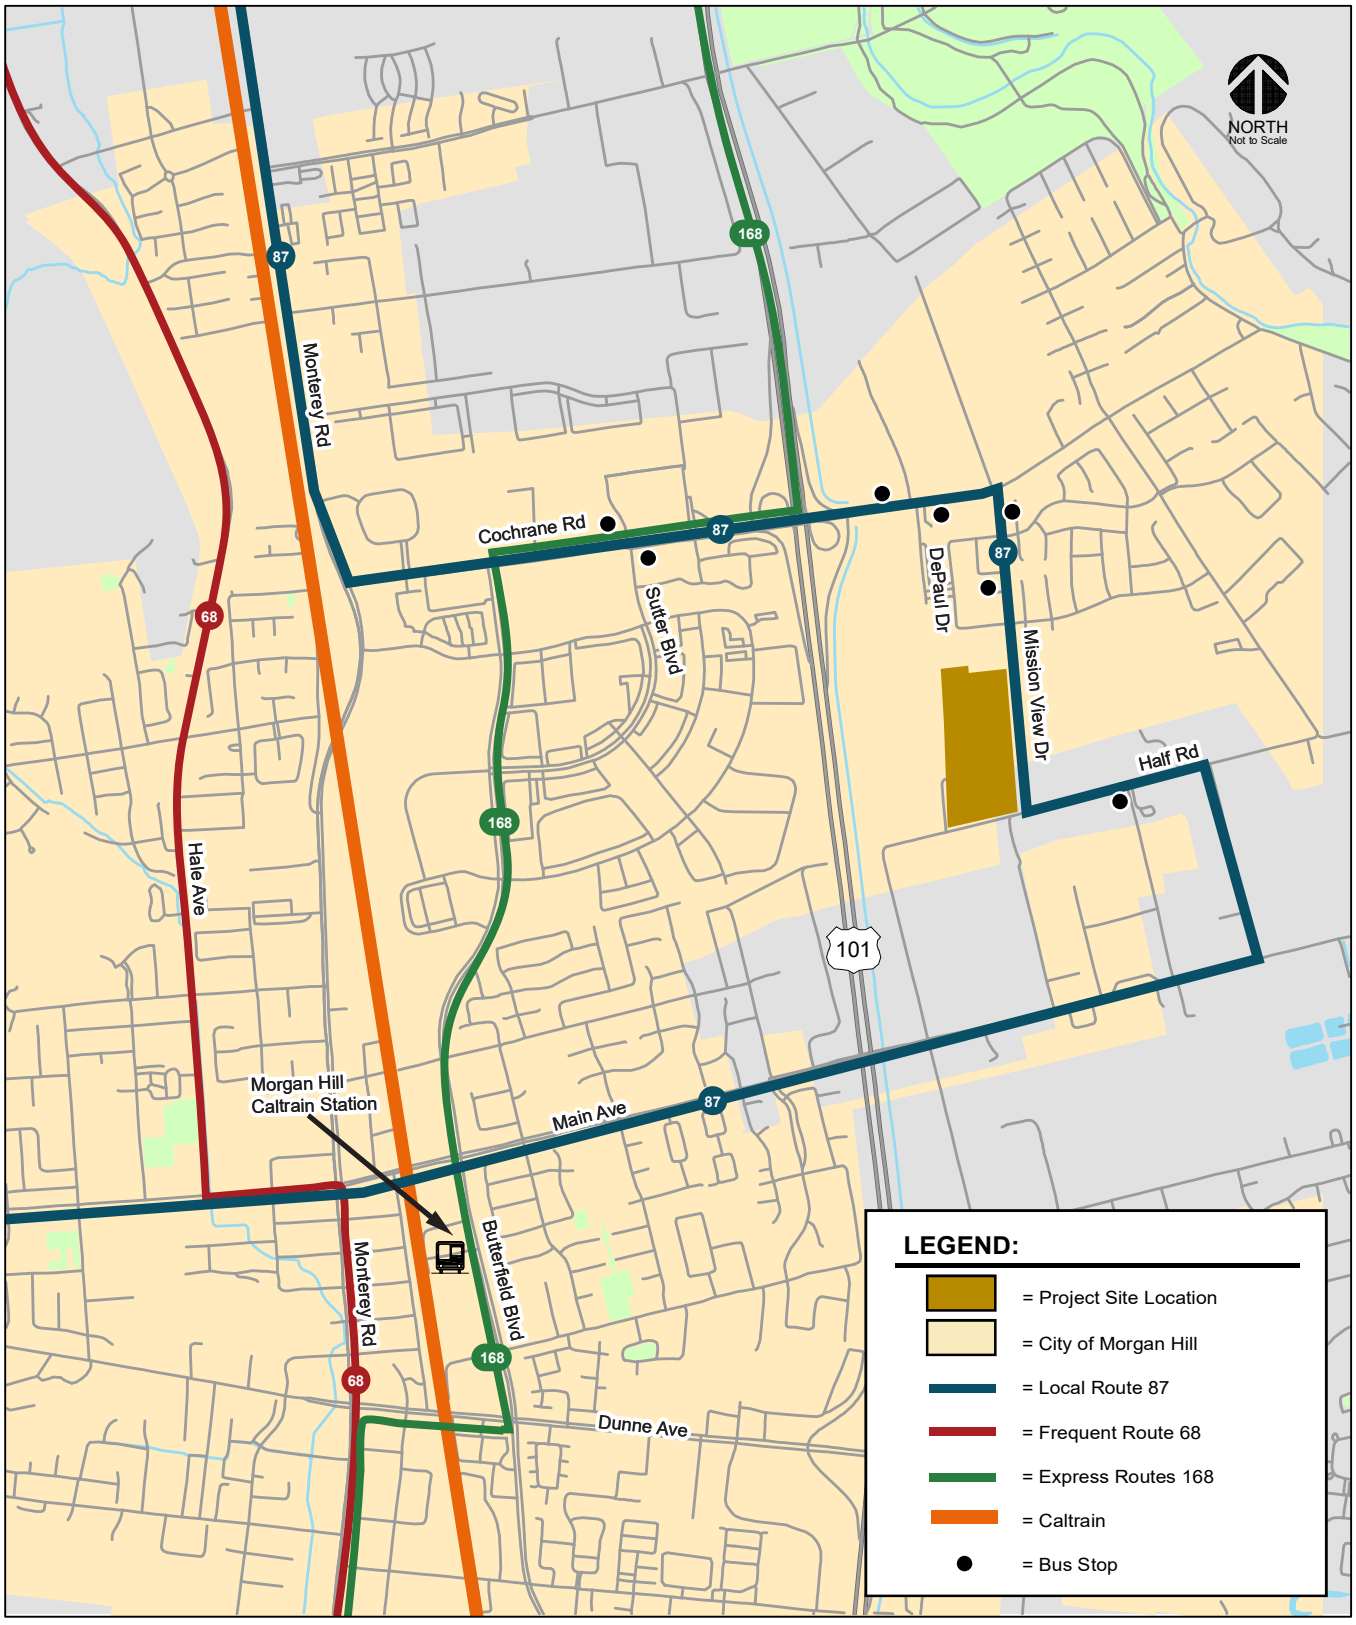
Existing Transit Services



Caltrain

Commuter rail service between San Francisco and Gilroy is provided by Caltrain. The Morgan Hill Caltrain Station is located along Depot Street, with main access and parking off of Butterfield Boulevard, approximately two miles from the project site. At the Morgan Hill Station, Caltrain provides service in only the northbound direction during the AM commute period with 30-minute headways and only in the southbound direction during the PM commute period with 90-minute headways.

3. CEQA VMT Evaluation

This chapter provides an evaluation of the proposed project's effect on Vehicle Miles Traveled (VMT). Pursuant to Senate Bill (SB) 743, the California Environmental Quality Act (CEQA) 2019 Update Guidelines Section 15064.3, subdivision (b) states that VMT will be the metric in analyzing transportation impacts for land use projects for CEQA purposes.

VMT Evaluation Methodology

VMT is the total miles of travel by personal motorized vehicles a project is expected to generate in a day. VMT measures the full distance of personal motorized vehicle trips with one end within the project. Typically, development projects that are farther from other, complementary land uses (such as a business park far from housing) and in areas without transit or active transportation infrastructure (bike lanes, sidewalks, etc.) generate more driving than development near complementary land uses with more robust transportation options. Therefore, developments located in a central business district with high density and diversity of complementary land uses and frequent transit services are expected to internalize trips and generate shorter and fewer vehicle trips than developments located in a suburban area with low density of residential developments and no transit serve in the project vicinity.

The evaluation of the project's effects on VMT was completed using *VTA's VMT Evaluation Tool.* The VMT tool identifies the existing average VMT per capita and VMT per employee for the project area based on the assessor's parcel number (APN) of a project. Based on the project location, type of development, project description, and proposed trip reduction measures, the evaluation tool calculates the project VMT. Projects located in areas where the existing VMT is above the established threshold are referred to as being in "high-VMT areas". Projects in high-VMT areas are required to include a set of VMT reduction measures that would reduce the project VMT to the greatest extent possible.

VMT Policies and Impact Criteria

To adhere to the state's legislation, the City of Morgan Hill is currently developing the framework for new transportation policies based on the implementation of VMT as the primary measure of transportation impacts for CEQA purposes. The new policies will replace the City's current transportation policies that are based on levels of service. However, since the City has not formally adopted its own City-specific VMT policies, this study utilizes VMT analysis methodology and impact thresholds recommended in the Governor's Office of Planning and Research (OPR) *Technical Advisory on Evaluating Transportation Impacts in CEQA*, December 2018.

Per OPR's technical advisory, VMT per resident (capita) is the recommended metric to evaluate CEQA-related transportation impacts for residential land uses. As stated in the technical advisory, OPR recommends an impact threshold of 15% below the existing VMT levels for residential land uses. OPR allows the existing VMT to be measured as regional or citywide VMT per capita. Therefore, 15% below the city-wide residential VMT per capita is established as the impact threshold for the residential uses of the project.

The VTA's VMT Evaluation Tool indicates that the citywide average VMT per capita is currently 24.64. Therefore, the OPR recommends an impact threshold of 15% below the citywide average VMT per capita equates to 20.94 VMT per capita.

VMT Evaluation

The results of the VMT analysis using the VTA's VMT Evaluation Tool indicate that the existing VMT for residential uses in the project vicinity is 30.46 VMT per capita.

The results also indicate that the project is projected to generate VMT per capita (27.41), which would exceed the OPR's recommended impact threshold of 20.94 VMT per capita. Therefore, the project would result in an impact on the transportation system based on OPR's VMT impact criteria.

The VTA VMT Evaluation Tool output sheets are shown in Figure 5 and also included in Appendix A.

VMT Impacts and Mitigation

Using OPR's impact thresholds, the project would need to implement VMT reduction measures to achieve a 24% reduction (27.41 to 20.94) in its VMT per capita for the proposed residential uses to reduce its impact to less than significant levels. However, a maximum 11% reduction in project VMT is possible regardless of the extent of VMT reduction measures implemented.

OPR's recommended 15% below existing VMT impact threshold encourages developments in transit-rich, highly mixed-use areas to implement design features and trip reduction measures to take advantage of existing multi-model infrastructure and land use mixes in reducing trip making and/or trip lengths. However, many communities such as Morgan Hill have very limited multi-modal transportation infrastructure and lack a mix of complementary land uses. The lack of employment in these communities along with minimal transit options results in a greater number and longer commute trips. Therefore, it is highly unlikely that developments like the proposed project in these cities can achieve OPR's recommended 15% reduction in VMT. Therefore, absent of the City adopting its own City-specific VMT policies and impact thresholds, the proposed project's VMT impact must be deemed significant and unavoidable.

Per its condition of approval and prior to project occupancy, the project applicant shall develop and implement a Transportation Demand Management (TDM) plan which targets a reduction in residential vehicle trips to and from the site. The TDM plan shall be prepared by a qualified traffic consultant and in coordination with the City of Morgan Hill Development Services Director or Designee. The TDM plan shall quantify the reduction in VMT. The TDM shall require the following measures:

1. Prior to project occupancy, the project applicant will be required to make a financial contribution to the City's on-site demand rideshare service (MoGo), as a one-time or annual financial contribution based on City approval, **or**

~~Per its condition of approval, the City will however require that the project implement and/or incorporate in its design the following VMT reduction measures to encourage the use of multi-modal travel and reduce the number and length of vehicular trips:~~

~~*1.* The management entity/HOA shall provide fully (100 percent) subsidized annual VTA transit passes for all project homeowners (a maximum of one transit subsidy per residential unit, which would result in up to 269 transit passes per year). This subsidized transit program shall be approved by the City of Morgan Hill's Public Services Director prior to issuance of occupancy.~~

~~2. The project must improve the surrounding pedestrian network by including sidewalks which terminate at the common property line, allowing for connections to the adjacent property in the~~

Residential Vehicle Miles Traveled (VMT) Screening Results

Land Use Type 1:	Residential
VMT Without Project:	Home-based VMT per Capita
VMT Baseline Description 1:	City Average
VMT Baseline Value 1:	24.64
VMT Threshold Description 1:	-15%
Land Use 1 has been Pre-Screened by the Local Jurisdiction:	N/A

	Without Project	With Project & Tier 1-3 VMT Reductions	With Project & All VMT Reductions
Project Generated Vehicle Miles Traveled (VMT) Rate	30.46	27.41	27.41
Low VMT Screening Analysis	No (Fail)	No (Fail)	No (Fail)

2. During project operations, the management entity/HOA shall provide fully (100 percent) subsidized annual VTA transit passes for all project homeowners (a maximum of one transit subsidy per residential unit, which would result in up to 269 transit passes per year). This subsidized transit program shall be approved by the City of Morgan Hill's Public Services Director prior to issuance of occupancy.
3. The project must improve the surrounding pedestrian network by including sidewalks which terminate at the common property line, allowing for connections to the adjacent property in the event there is development in the future. Continuous sidewalks are proposed along the project frontages. The proposed frontage improvements along Mission View Drive, Half Road, and De Paul Drive include sidewalk improvements; each of the street sections will be wide enough to accommodate future bicycle lanes.
4. The proposed development will include 64 bicycle parking spaces.

The proposed frontage improvements along Mission View Drive, Half Road, and De Paul Drive include sidewalk improvements; each of the street sections will be wide enough to accommodate future bicycle lanes.~~

~~3. The proposed development will include 64 bicycle parking spaces.~~

4. Traffic Operations Analysis

This chapter describes the traffic operations analysis. The traffic operations analysis provides supplemental analysis for use by the City of Morgan Hill in identifying potential improvement of the transportation system that may be included as part of the project's Conditions of Approval. However, the identified roadway operations and improvements are not required or considered project impacts per CEQA guidelines.

The chapter presents the method by which project traffic is estimated, intersection operations analysis for existing, existing plus project, Year 2030 cumulative conditions, the identification of any adverse effects on study intersections caused by project generated trips, and recommended improvements to alleviate the identified operational issues. In addition, the chapter includes an intersection vehicle queuing analysis, freeway segment capacity evaluation, site access and on-site circulation review, review of the project's effects on bicycle, pedestrian, and transit facilities, and a review of required parking.

Project Description

The 30.5-acre project site is currently vacant and is generally bounded by Half Road to the south, Mission View Drive to the east, future extension of DePaul Drive to the west, and Avenida De Los Padres to the north. The project as proposed will consist of a total of 269 residential units comprised of 149 condos, 56 detached single-family, and 64 duet units. The project would include the extension of DePaul Drive to the south with termination as a cul-de-sac just north of Half Road. Access to the project site would be provided via a full access driveway along Mission View Drive and two full access driveways along the future DePaul Drive extension.

Project Trip Estimates

The magnitude of traffic produced by a new development and the locations where that traffic would appear are estimated using a three-step process: (1) trip generation, (2) trip distribution, and (3) trip assignment. In determining project trip generation, the magnitude of traffic entering and exiting the site is estimated for the AM and PM peak hours. As part of the project trip distribution step, an estimate is made of the directions to and from which the project trips would travel. In the project trip assignment

step, the project trips are assigned to specific streets and intersections in the study area. These procedures are described further in the following sections.

Trip Generation

Through empirical research, data have been collected that correlate to common land uses their propensity for producing traffic. Thus, for the most common land uses there are standard trip generation rates that can be applied to help predict the future traffic increases that would result from a new development. Hexagon prepared trip estimates for the proposed project based on trip generation rates obtained from the Institute of Transportation Engineers' (ITE's) *Trip Generation Manual*, Tenth Edition, 2017. Single-Family Detached Housing (Land Use 210) trip generation rates were used to estimate the number of trips that would be generated by all proposed residential units because the trip-making characteristics of varying types of residential units would be similar due to the limited transit services and employment opportunities within Morgan Hill.

Based on the recommended rates for single-family detached housing (Land Use #210) and the size of the proposed project, it is estimated that the proposed project would generate 2,539 daily trips, with 199 trips (50 inbound and 149 outbound) occurring during the AM peak hour and 266 trips (168 inbound and 98 outbound) occurring during the PM peak hour. The trip generation estimates for the proposed project are shown in Table 1.

Trip Distribution and Assignment

The trip distribution patterns for project-generated traffic for the proposed land use were estimated based on existing travel patterns on the surrounding roadway system, locations of complementary land uses, and use of the City of Morgan Hill Traffic Demand Forecasting (TDF) Model. The peak-hour trips associated with the proposed project were added to the transportation network in accordance with the distribution patterns discussed above. The project trip distribution patterns are shown graphically in Figure 6. Figure 7 shows the assignment of project traffic on the local transportation network. A tabular summary of project traffic at each study intersection is contained in Appendix C.

Intersection Operations Methodology

This section presents the methods used to evaluate traffic operations at each of the study intersections for each study scenario. It includes descriptions of the data requirements, the analysis methodologies, and the applicable level of service standards, and the criteria defining adverse effects at the study intersections. The intersection operations analysis is intended to quantify the operations of intersections and to identify potential negative effects due to the addition of project traffic. However, a potential adverse effect on a study intersection is not considered a CEQA impact metric.

Study Intersections

The traffic operations analysis includes an analysis of AM and PM peak-hour traffic conditions for ten signalized intersections and three unsignalized intersections. The study intersections are identified below.

1. Cochrane Road and Sutter Boulevard
2. Cochrane Road and Madrone Parkway/Cochrane Plaza
3. Cochrane Road and US 101 Southbound Ramps
4. Cochrane Road and US 101 Northbound Ramps
5. Cochrane Road and De Paul Drive

Table 1

10. Condit Road and Diana Avenue (*unsignalized*)
11. East Dunne Avenue and Condit Road
12. Butterfield Boulevard and Main Avenue
13. Monterey Road and Main Avenue

Traffic conditions at all of the study intersections were analyzed for the weekday AM and PM peak hours. The weekday AM peak hour of traffic is generally between 7:00 AM and 9:00 AM and the weekday PM peak hour is typically between 4:00 PM and 6:00 PM. It is during these periods that the most congested traffic conditions occur on a typical weekday. Traffic conditions were evaluated for the conditions described below:

Scenario 1: *Existing Conditions.* Existing conditions represent existing peak-hour traffic volumes on the existing roadway network. New traffic counts could not be collected due to the current COVID-19 pandemic affecting normal travel traffic patterns. Therefore, traffic counts collected prior to the COVID-19 pandemic in 2018-2019 as part of the Morgan Hill Technology Center development project were used in this analysis.

Scenario 2: *Existing Plus Project Conditions*. Project-generated traffic volumes were added to existing traffic volumes to estimate existing plus project conditions. Existing plus project conditions were evaluated relative to existing conditions in order to determine potential project impacts.

Scenario 3: *Year 2030 Cumulative without Project Conditions.* Year 2030 Cumulative without project conditions represent traffic growth projected to occur in the Year 2030 without the proposed project on the existing transportation network. Projected 2030 traffic growth was developed by interpolating the projected Year 2035 traffic growth.

Scenario 4: *Year 2030 Cumulative with Project Conditions.* Project-generated traffic volumes were added to Year 2030 Cumulative without project to estimate Year 2030 Cumulative with project conditions. Year 2030 Cumulative with project conditions were evaluated relative to Year 2030 Cumulative without project conditions in order to determine potential project impacts.

Data Requirements

The data required for the analysis were obtained from recently completed traffic studies, the City of Morgan Hill, the 2018 CMP Monitoring and Conformance Report, and field observations. The following data were collected from these sources:

- lane configurations
- existing traffic volumes
- signal timing and phasing
- average speeds on freeway segments
- Year 2035 traffic forecasts

Lane Configurations

The existing lane configurations at the study intersections were determined by observations in the field and are shown in Figure 8. It is assumed in this analysis that the roadway network and intersection configurations under existing plus project and Year 2030 cumulative conditions would be the same as described under existing conditions with the exception of the following improvements.

Extension of DePaul Drive. As part of the project, DePaul Drive is proposed to be extended by approximately 2,280 feet south to provide direct access to the project site via two full access driveways. As proposed, DePaul Drive will terminate as a cul-de-sac just north of Half Road.

Mission View Drive and Half Road. All-way stop signs installation at this intersection is planned by the County and should be completed in the near future. Therefore, this intersection is assumed to be one-way stop-controlled under existing conditions and all-way stop-controlled under Year 2030 cumulative conditions.

Traffic Volumes

Existing Traffic Volumes

Existing conditions represent existing peak-hour traffic volumes on the existing roadway network. New traffic counts could not be collected due to the current COVID-19 pandemic affecting normal travel traffic patterns. Therefore, traffic counts collected prior to the COVID-19 pandemic in 2018-2019 as part of the Morgan Hill Technology Center development project were used in this analysis. The existing peak-hour intersection volumes are shown in Figure 9. Intersection turning-movement counts conducted for this analysis are presented in Appendix B.

Year 2030 Cumulative Land Use and Traffic Forecasts

Year 2030 Cumulative traffic volumes were developed based on traffic forecasts produced for the City of Morgan Hill 2035 General Plan using the City's Traffic Demand Forecasting (TDF) model. Year 2035 General Plan traffic forecasts include land use growth and transportation improvements associated with the buildout of the City's General Plan.

The 2035 General Plan forecasts also include trips associated with 345 residential units per the adopted General Plan land use for the project site. Therefore, the trips associated with the adopted General Plan land use for the project site were removed from the projected Year 2035 traffic volumes. To develop Year 2030 Cumulative without project condition traffic volumes, Hexagon prepared trip estimates for the adopted GP land uses for comparison with the proposed project. When compared with the land use included in the City's General Plan, the proposed project would result in reductions of 56 AM and 76 PM peak hour trips for the project site. The trip generation estimates for the proposed and adopted General Plan land uses for the site are presented in Table 2.

The Year 2030 Cumulative without project traffic volumes were then estimated using a growth method that involved adding a proportion (15 Years or 75%) of the 2035 projected growth, with the removal of the trips associated with the adopted General Plan land uses for the project, to existing traffic counts at each of the study intersections. Figure 10 shows the Year 2030 Cumulative without project traffic volumes. Appendix C lists each of the components used to tabulate cumulative traffic volumes at each study intersection.

Table 2
General Plan 2035 Trip Generation Estimates

			Daily		AM Peak Hour						PM Peak Hour					
						Split		Trip				Split		Trip		
Proposed Land Use	Size		Rate	Trip	Rate	In	Out	In	Out	Total	Rate	In	Out	In	Out	Total

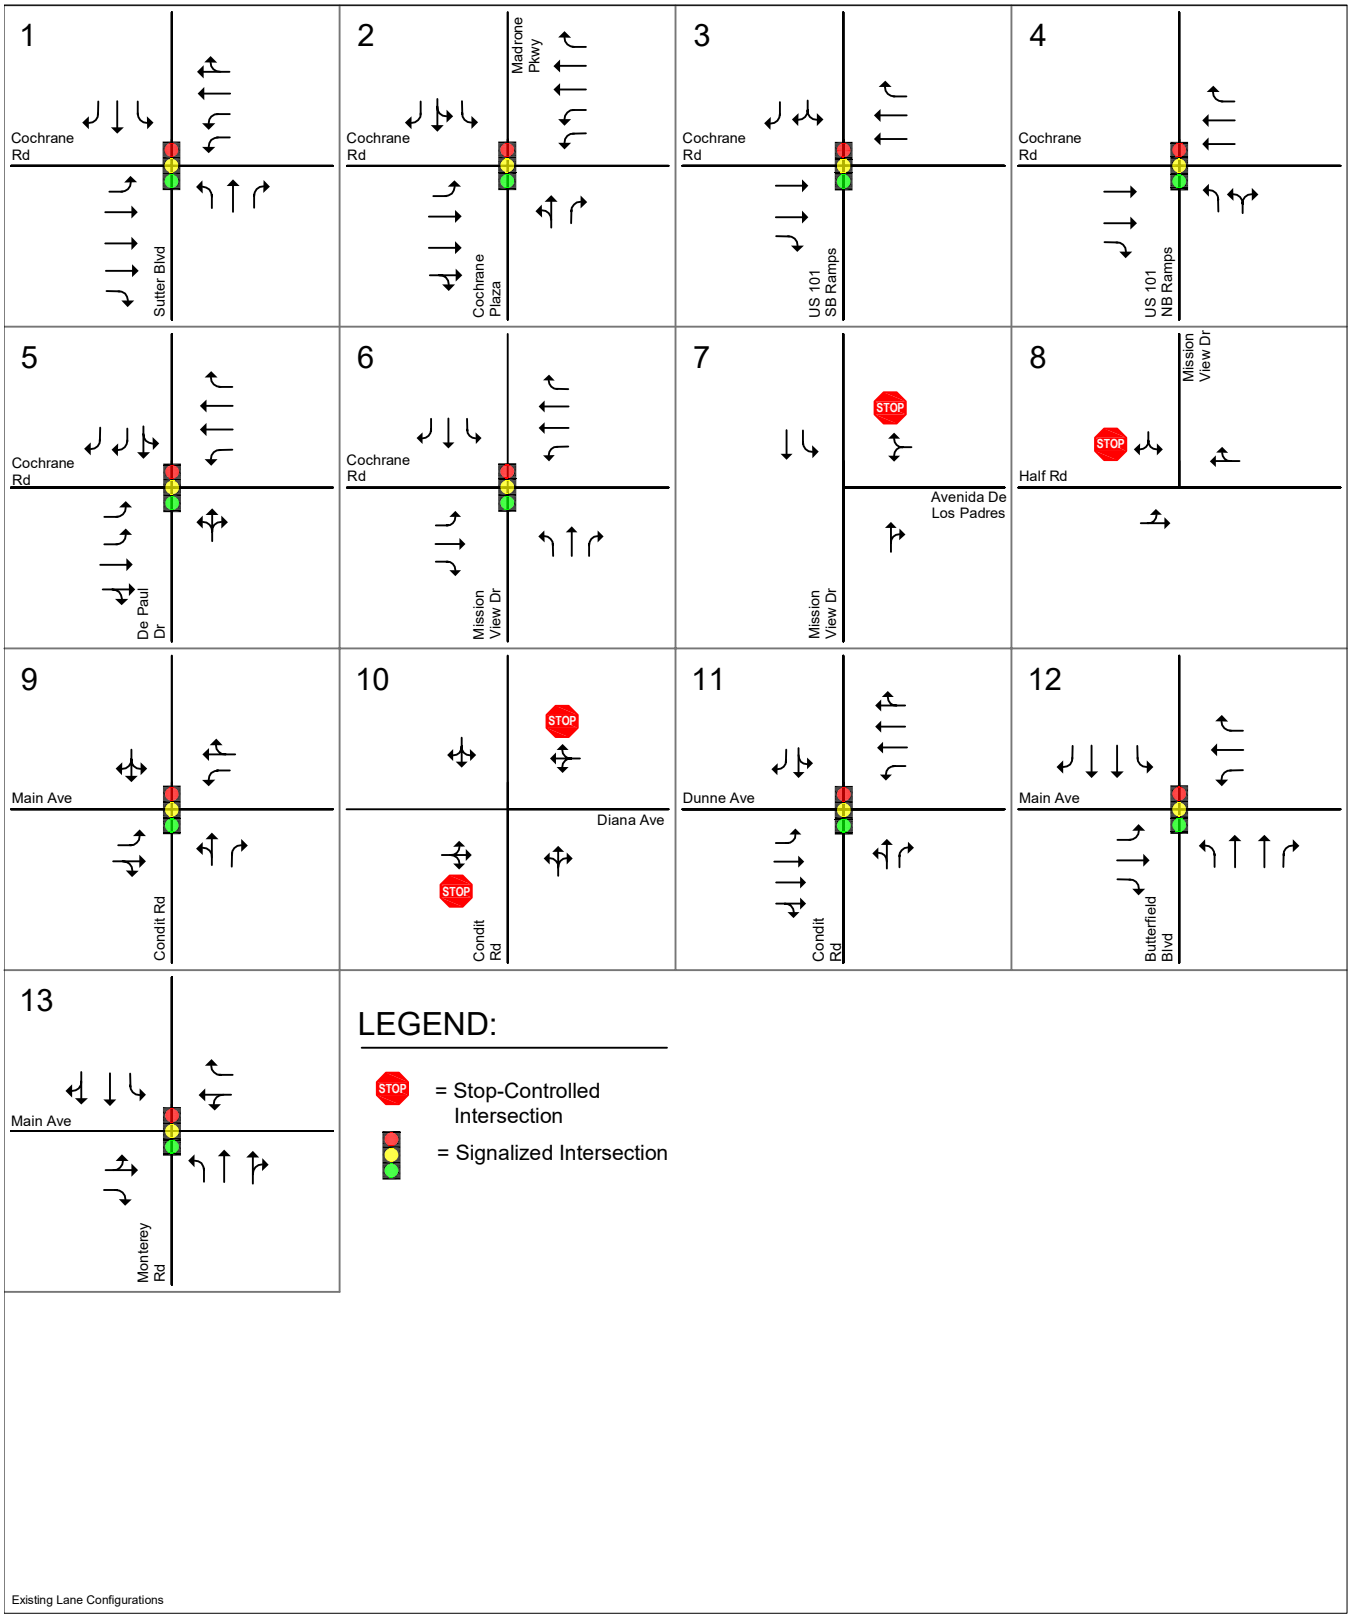

Figure 9
Existing Traffic Volumes

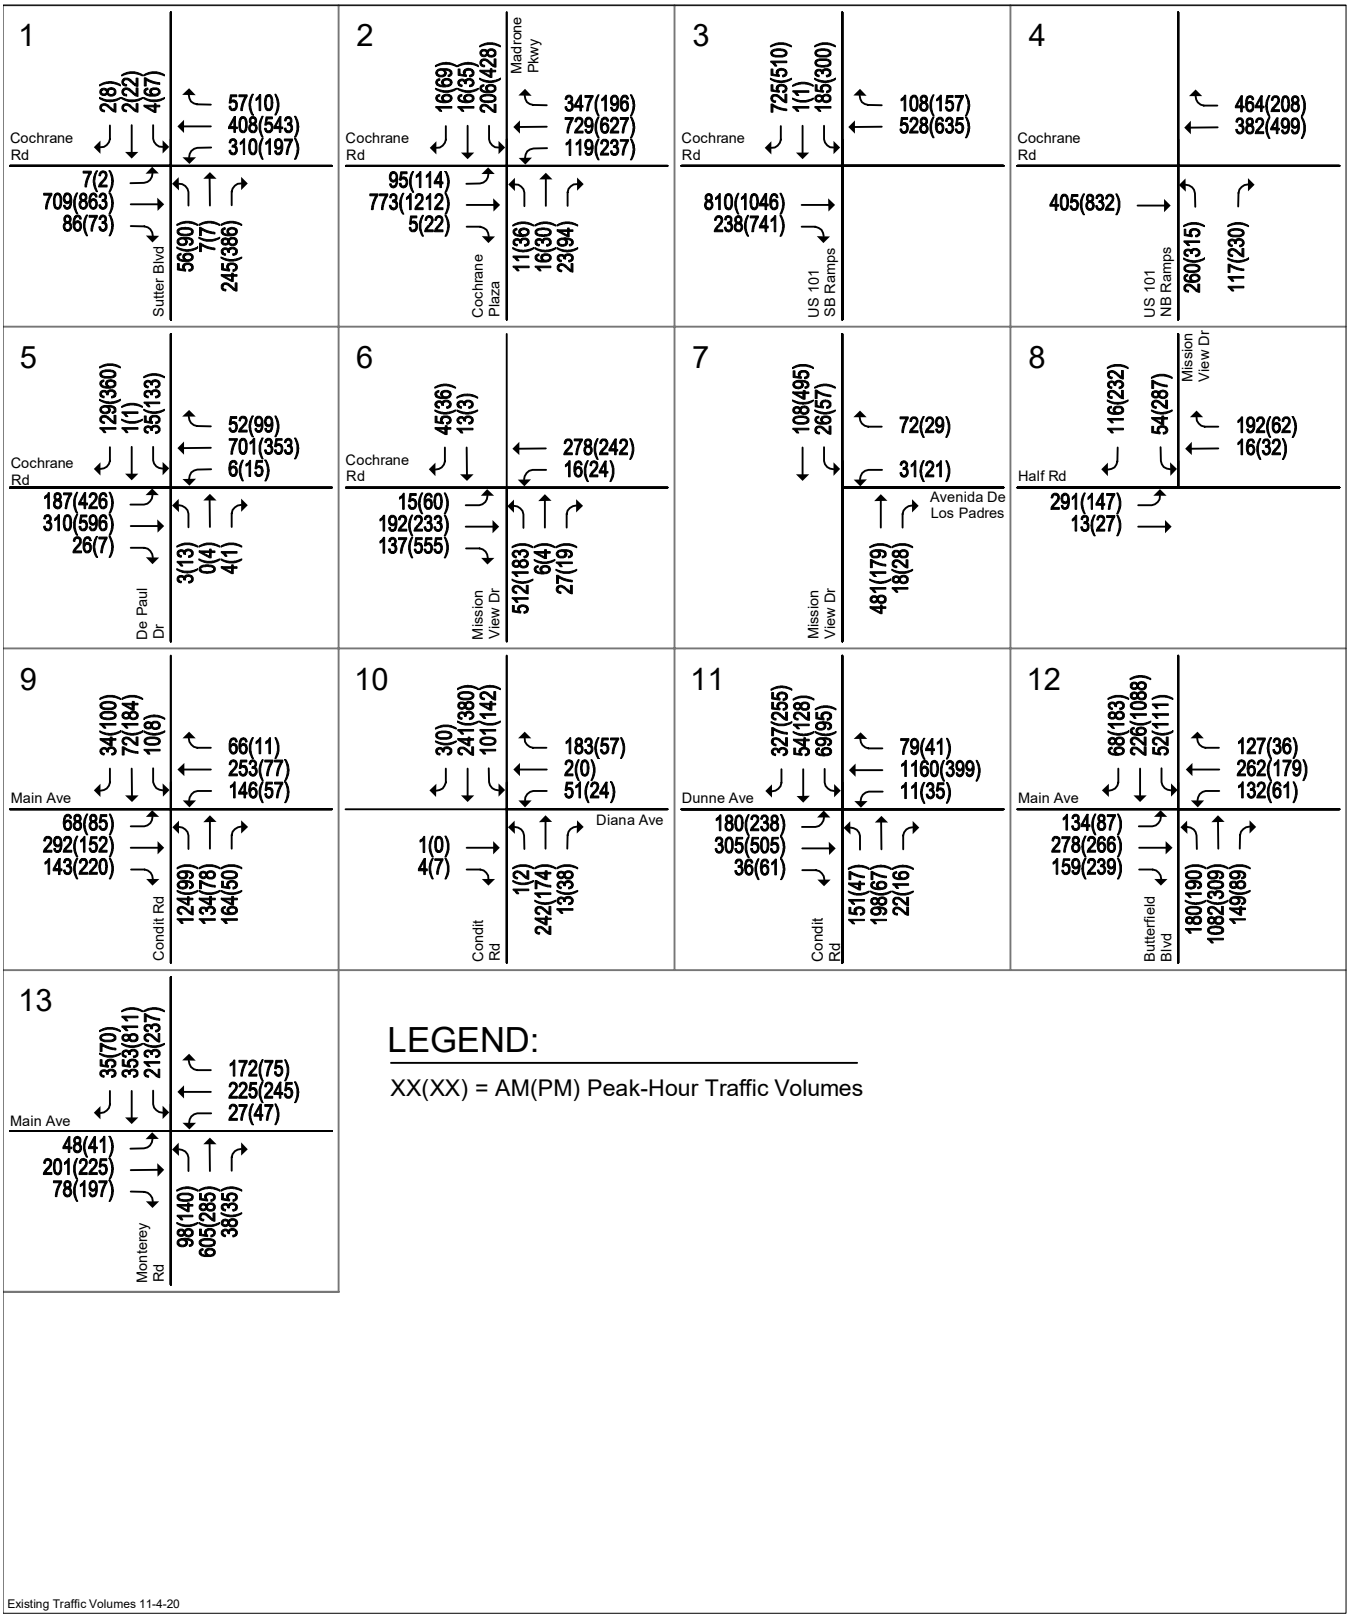

Figure 10
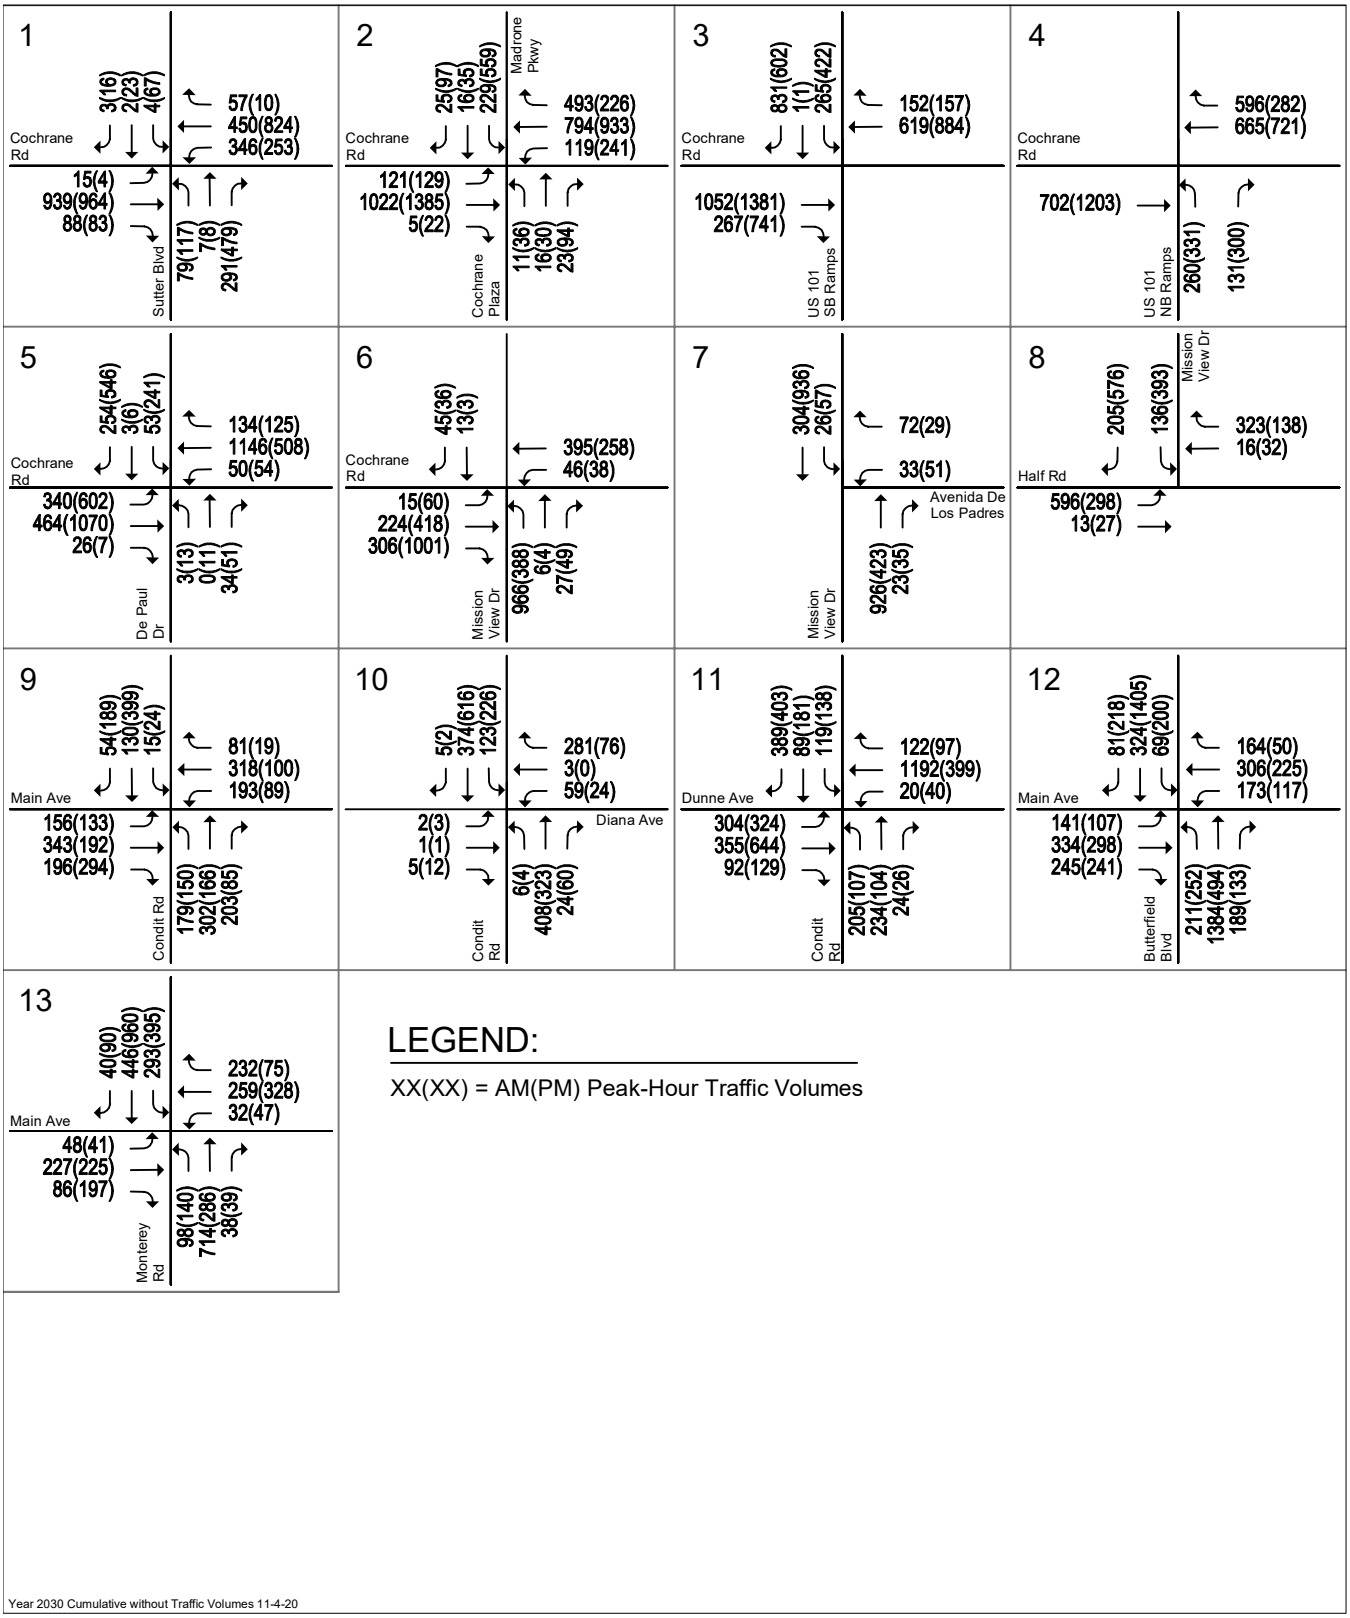
Year 2030 Cumulative without Project Traffic Volumes



Existing and Year 2030 Cumulative Plus Project Traffic Volumes

Project trips as represented in the project trip assignment were added to the existing traffic and Year 2030 Cumulative without project traffic volumes to obtain existing and Year 2030 Cumulative with project traffic volumes. The existing plus project and Year 2030 Cumulative with project traffic volumes are shown in Figures 11 and 12, respectively.

Intersection Level of Service Standards and Analysis Methodologies

Traffic conditions at the study intersections were evaluated using level of service (LOS). *Level of Service* is a qualitative description of operating conditions ranging from LOS A, or free-flow conditions with little or no delay, to LOS F, or jammed conditions with excessive delays. The analysis methods are described below.

Signalized Intersections

Signalized study intersections are subject to the City of Morgan Hill's level of service standards. The City of Morgan Hill's level of service methodology is TRAFFIX, which is based on the 2000 *Highway Capacity Manual* (HCM) method for signalized intersections. TRAFFIX evaluates signalized intersections operations based on average delay time for all vehicles at the intersection. Since TRAFFIX is also the CMP-designated intersection level of service methodology, the City of Morgan Hill methodology employs the CMP defaults values for the analysis parameters, which include adjusted saturation flow rates to reflect conditions in Santa Clara County. All intersections within the City of Morgan Hill are required to meet the City's LOS standard of LOS D, with the exception of the following:

- **LOS F** for Downtown intersections and segments including at Main/Monterey, along Monterey Road between Main and Fifth Street, and along Depot Street at First through Fifth Street;

  LOS E for the following intersections and freeway zones:

  - Main Avenue and Del Monte Avenue
  - Main Avenue and Depot Street
  - Dunne Avenue and Del Monte Avenue
  - Dunne Avenue and Monterey Avenue
  - Dunne Avenue and Church Street
  - Dunne Avenue and Depot Street
  - Cochrane Road and Monterey Road
  - Tennant Avenue and Monterey Road
  - Tennant Avenue and Butterfield Boulevard
  - Cochrane Road Freeway Zone: from Madrone Parkway/Cochrane Plaza to Cochrane Road/DePaul Drive
  - Dunne Avenue Freeway Zone: from Walnut Grove Drive/East Dunne Avenue to Condit Road/East Dunne Avenue
  - Tennant Avenue Freeway Zone: from Butterfield Boulevard/Tennant Avenue to Condit Road/Tennant Avenue

The correlation between average delay and level of service for signalized intersections is shown in Table 3.

Figure 11
Existing Plus Project Traffic Volumes

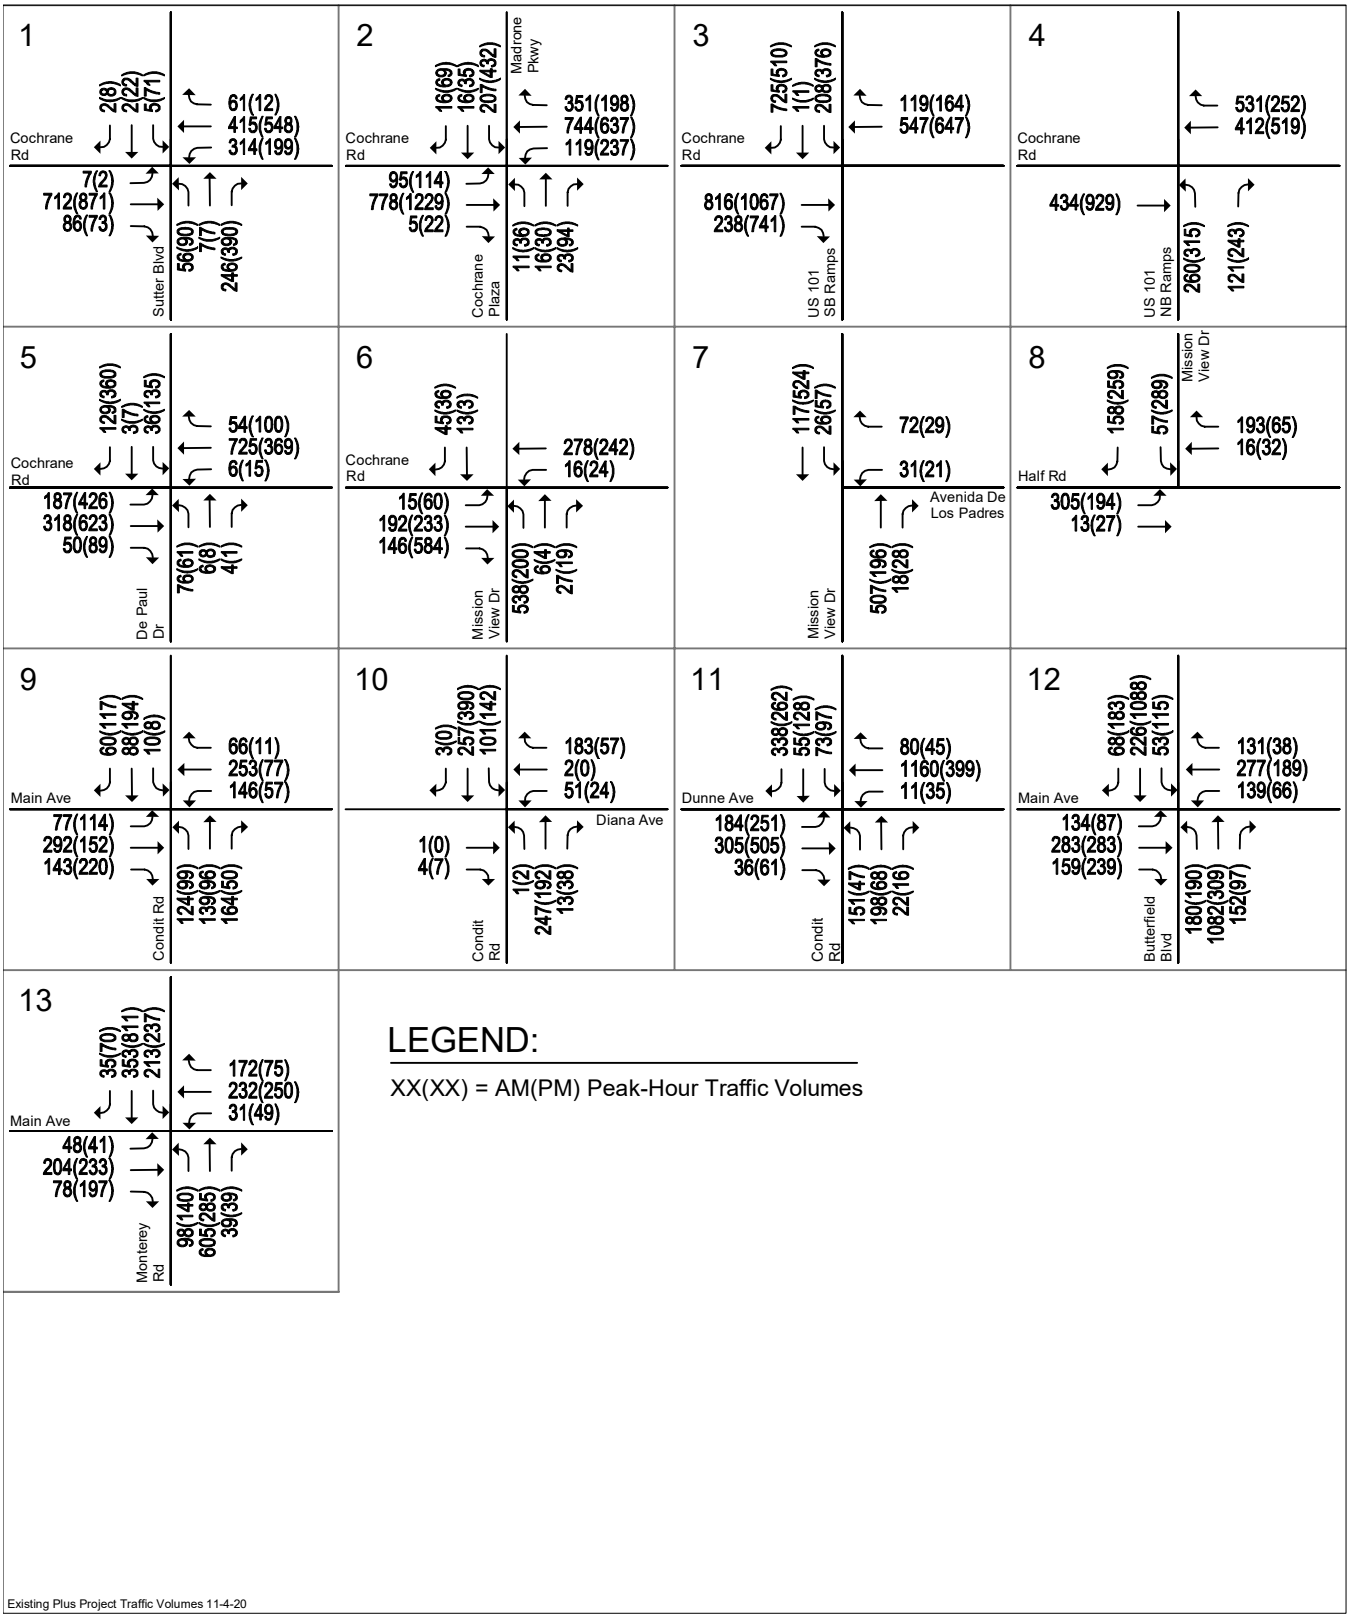


Figure 12
Year 2030 Cumulative with Project Traffic Volumes

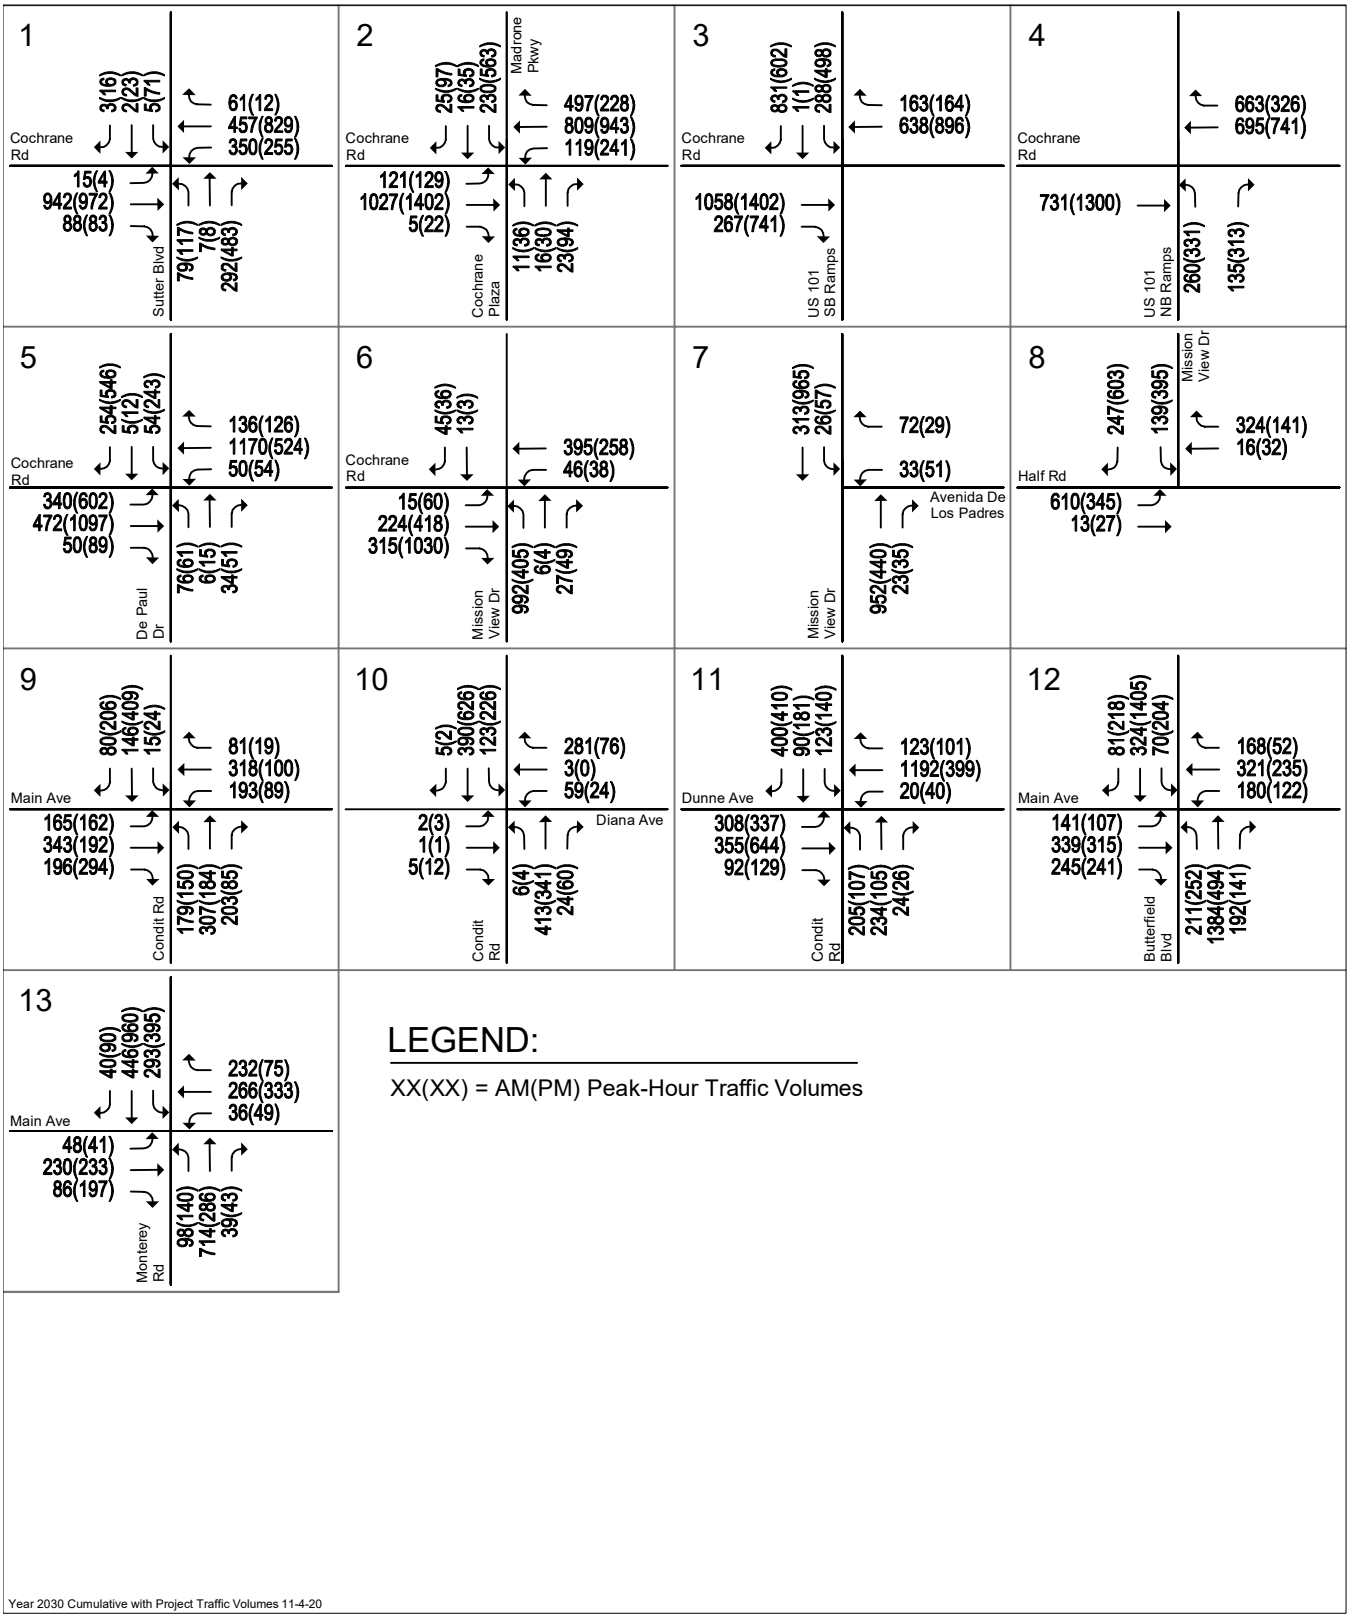

Table 3
Signalized Intersection Level of Service Definitions Based on Control Delay

Level of Service	Description	Average Control Delay per Vehicle (sec.)
A	Operations with very low delay occurring with favorable progression and/or short cycle lengths.	up to 10.0
B	Operations with low delay occurring with good progression and/or short cycle lengths.	10.1 to 20.0
C	Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	20.1 to 35.0
D	Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.	35.1 to 55.0
E	Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences. This is considered to be the limit of acceptable	55.1 to 80.0
F	Operation with delays unacceptable to most drivers occurring due to oversaturation, poor progression, or very long cycle lengths.	Greater than 80.0

Sources: Transportation Research Board, *2000 Highway Capacity Manual* (Santa Clara County and City of Gilroy adopted level of service methodology). *Traffic Level of Service Analysis Guidelines*, Santa Clara County Transportation Authority Congestion Management Program, June 2003.

Unsignalized Intersections

The methodology used to determine the level of service for unsignalized intersections is also TRAFFIX and the *2000 HCM* methodology for unsignalized intersection analysis. This method is applicable for both two-way and all-way stop-controlled intersections. For the analysis of stop-controlled intersections, the *2000 HCM* methodology evaluates intersection operations on the basis of average control delay time for all vehicles on the stop-controlled approaches. For the purpose of reporting the level of service for one- and two-way stop-controlled intersections, the delay and corresponding level of service for the stop-controlled minor street approach with the highest delay is reported. For all-way stop-controlled intersections, the reported average delay and the corresponding level of service is the average for all approaches at the intersection. The City uses a minimum acceptable level of service standard of LOS D for unsignalized intersections, in accordance with its adopted threshold of significance in its Guidelines for Preparation of Transportation Impact Reports. The correlation between average delay and level of service for unsignalized intersections is shown in Table 4.

Signal Warrants

The level of service analysis at unsignalized intersections is supplemented with an assessment of the need for signalization of the intersection. The need for signalization of unsignalized intersections is assessed based on the Peak Hour Volume Warrant (Warrant 3) described in the *California Manual on Uniform Traffic Control Devices for Streets and Highways (CA MUTCD)*, Part 4, Highway Traffic Signals, 2014. This method makes no evaluation of the intersection level of service but simply provides an indication of whether vehicular peak hour traffic volumes are, or would be, sufficient to justify the installation of a traffic signal. The decision to install a traffic signal should not be based purely on the warrants alone. Instead, the installation of a signal should be considered, and further analysis

Table 4
Unsignalized Intersection Level of Service Definitions Based on Control Delay

Level of Service	Description	Average Control Delay per Vehicle (sec.)
A	Operations with very low delays occurring with favorable progression.	up to 10.0
B	Operations with low delays occurring with good progression.	10.1 to 15.0
C	Operations with average delays resulting from fair progression.	15.1 to 25.0
D	Operation with longer delays due to a combination of unfavorable progression of high V/C ratios.	25.1 to 35.0
E	Operation with high delay values indicating poor progression and high V/C ratios. This is considered to be the limited of acceptable delay.	35.1 to 50.0
F	Operation with delays unacceptable to most drivers occurring due to oversaturation and poor progression.	Greater than 50.0

Source: Transportation Research Board, 2000 Highway Capacity Manual, (Washington, D.C., 2000).

performed when one or more of the warrants are met. Additionally, engineering judgment is exercised on a case-by-case basis to evaluate the effect a traffic signal will have on certain types of accidents and traffic conditions at the subject intersection as well as at adjacent intersections. Intersections that meet the peak hour warrant are subject to further analysis before determining that a traffic signal is necessary. Other options such as traffic control devices, signage, or geometric changes may be preferable based on existing field conditions.

Definition of Adverse Intersection Operations Effects

According to the City of Morgan Hill level of service guidelines, a development is said to create a significant adverse effect on traffic conditions at a signalized intersection if for either peak hour:

1. The level of service at the intersection degrades from an acceptable level (LOS D or LOS E as identified above) under no project conditions to an unacceptable level (LOS E or F) under project conditions, or
2. The level of service at the intersection is an unacceptable level (LOS E or F as identified above) under no project conditions and the addition of project trips causes the average critical delay to increase by four (4) or more seconds *and* the volume-to-capacity ratio (V/C) to increase by 0.01.

An exception to this rule applies when the addition of project traffic reduces the amount of average delay for critical movements (i.e., the change in average delay for critical movements is negative). In this case, the threshold of significance is an increase in the critical V/C value by 0.01 or more.

Definition of Adverse Unsignalized Intersection Operations Effects

Unsignalized intersections within the City of Morgan Hill have a minimum operating level of LOS D. According to the City of Morgan Hill level of service guidelines, a development is said to have a significant adverse effect on traffic conditions at an unsignalized intersection if for either peak hour the addition of project traffic causes the worst approach delay to degrade to LOS E or F ***and*** the traffic volumes at the intersection are sufficiently high to satisfy the peak hour volume warrant.

Intersection Operations Analysis

Existing Plus Project Intersection Operations Analysis

The results of the intersection level of service and signal warrant analyses under existing and existing plus project conditions are summarized in Table 5. The level of service calculation sheets are included in Appendix D. The peak-hour signal warrant sheets are contained in Appendix E.

Existing Conditions

The results of the level of service analysis indicate that, measured against the City of Morgan Hill level of service standards, all the study intersections currently operate at an acceptable level of service, LOS D or better, under existing conditions during each of the peak hours analyzed.

The results of the signal warrant analysis indicate that the existing traffic volumes at the intersection of Mission View Drive and Cochrane Road were sufficient to warrant the installation of a traffic signal during the AM and PM peak hours under existing conditions, based on counts conducted in May 2018. However, a traffic signal has since been installed at the intersection and is currently operational. Additionally, the intersection of Condit Road and Diana Avenue currently also has volumes that warrant signalization. All other unsignalized study intersections currently have traffic conditions that fall below the thresholds that warrant signalization.

Existing Plus Project Conditions

The results of the level of service analysis indicate that, when measured against the City of Morgan Hill level of service standards, all of the study intersections are projected to operate at acceptable levels of service, LOS D or better, under existing plus project conditions during each of the peak hours analyzed.

The results of signal warrant analysis indicate that the intersection of Condit Road and Diana Avenue is projected to have volumes that would warrant signalization. However, the intersection is projected to operate within the applicable level of service standards. Therefore, the project would not have an adverse effect on operations at the intersection based on the City of Morgan Hill's standards. All other unsignalized study intersections are projected to have traffic conditions that fall below the thresholds that warrant signalization.

Year 2030 Cumulative with Project Intersection Operations Analysis

The results of the intersection level of service and signal warrant analyses under Year 2030 Cumulative without and with project are summarized in Table 6.

The results of the level of service analysis indicate that the following five intersections would operate at unacceptable levels of service (LOS E or F) during Year 2030 Cumulative without and with project during at least one peak hour when measured against the City of Morgan Hill's level of service standards of LOS D:

Notes:
[1]AWSC = All-Way Stop-Controlled; TWSC = Two-Way Stop-Controlled
[2]The reported delay and corresponding level of service for signalized intersections represent the average delay for all approaches at the intersection.
The reported delay and corresponding level of service for one- and two-way stop-controlled intersections are based on the stop-controlled approach with the highest delay.
Bold indicates unacceptable level of service or signal warrant met.
Bold and boxed indicate adverse effect on operations.

6. Cochrane Road and Mission View Drive (AM and PM Peak Hours)
7. Mission View Drive and Avenida De Los Padres (unsignalized) (PM Peak Hour)
8. Mission View Drive and Half Road (unsignalized) (PM Peak Hour)
9. Main Avenue and Condit Road (PM Peak Hour)
10. Condit Road and Diana Avenue (unsignalized) (AM Peak Hour)

Additionally, the intersection of Mission View Drive and Half Road is projected to operate at LOS D during the AM peak-hour under Year 2030 cumulative conditions and degrade to LOS E with the addition of project traffic.

All of the remaining study intersections are projected to operate at acceptable levels of service under Year 2030 Cumulative without and with project, during each of the peak hours analyzed.

The results of the signal warrant analyses indicate the following two intersections are projected to have traffic volumes under Year 2030 Cumulative without and with project that would meet thresholds that warrant signalization during at least one peak hour.

8. Mission View Drive and Half Road (unsignalized) (AM & PM Peak Hours)
10. Condit Road and Diana Avenue (unsignalized) (AM & PM Peak Hour)

All other unsignalized study intersections are projected to have traffic conditions that fall below the thresholds that warrant signalization.

Based on the City's operating standards, the proposed project would have an adverse effect on intersection operations at the following four study intersections.

6. Mission View Drive and Cochrane Road (AM & PM Peak Hours)
8. Mission View Drive and Half Road (unsignalized) (AM & PM Peak Hours)
9. Condit Road and Main Avenue (PM Peak Hour)
10. Condit Road and Diana Avenue (unsignalized) (AM Peak Hour)

Adverse Intersection Operations Effects and Potential Improvements

This section discusses the adverse intersection operation effects identified under Year 2030 Cumulative with project conditions. Included are descriptions of the adverse effects on intersection operations and potential improvement measures that may be included as part of the project's Conditions of Approval. However, the identified roadway operations and improvements are not required or considered project impacts per CEQA guidelines.

6. Cochrane Road and Mission View Drive

This intersection is projected to operate at an unacceptable LOS F and E during the AM and PM peak hours, respectively, under Year 2030 Cumulative without project conditions. Traffic associated with the proposed project would cause the critical delay to increase by more than four seconds and the volume-to-capacity ratio (V/C) to increase by more than 0.01 during both the AM and PM peak hours. This constitutes an adverse effect on intersection operations based on the City of Morgan Hill's level of service standards.

The addition of a second northbound left-turn lane on Mission View Drive and a cycle length adjustment would be necessary to improve intersection operations. The addition of the second northbound left-turn lane will require lane striping and signal modification but will fit within the existing curb-to-curb pavement width on Mission View Drive. Implementation of this improvement would improve the intersection's level of service to LOS C during both the AM and PM peak hours under Year 2030 Cumulative with project conditions.

8. Mission View Drive and Half Road

This intersection is projected to operate at an unacceptable LOS F during the PM peak hour under Year 2030 Cumulative without and with project conditions. Furthermore, this intersection is projected to operate at an acceptable LOS D during the AM peak hour under Year 2030 Cumulative without conditions and degrade to LOS E with the addition of project traffic. Additionally, the peak-hour traffic signal warrant checks indicate that the intersection would have traffic volumes that meet thresholds that warrant signalization during both the AM and PM peak hours under Year 2030 Cumulative without and with project conditions. This constitutes an adverse effect on intersection operations based on the City of Morgan Hill's level of service standards.

The signalization of the intersection would be necessary to improve intersection operations. Implementation of a traffic signal at this location would improve the level of service to LOS C during both the AM and PM peak hours under Year 2030 Cumulative with project. This intersection is under the jurisdiction of both the City of Morgan Hill and Santa Clara County. Therefore, implementation of the recommended improvements will require City and County approval.

9. Main Avenue and Condit Road

This intersection is projected to operate at an unacceptable LOS F during the PM peak hour under Year 2030 Cumulative without project conditions. Traffic associated with the proposed project would cause the critical delay to increase by more than four seconds and the volume-to-capacity ratio (V/C) to increase by more than 0.01 during the PM peak hour. This constitutes an adverse effect on intersection operations based on the City of Morgan Hill's level of service standards.

The addition of an exclusive southbound right-turn lane on Condit Road would be necessary to improve intersection operations. The addition of the right-turn lane will require signal modifications and lane striping on the southbound approach. Implementation of this improvement would improve the intersection's level of service to LOS D during the PM peak hour under Year 2030 Cumulative with project conditions. This intersection is under the jurisdiction of both the City of Morgan Hill and Santa Clara County. Therefore, implementation of the recommended improvements will require City and County approval.

10. Condit Road and Diana Avenue

This intersection is projected to operate at an unacceptable LOS E during the AM peak hour under Year 2030 Cumulative without and with project conditions. Additionally, the peak-hour traffic signal warrant checks indicate that the intersection would have traffic volumes that meet thresholds that warrant signalization during the AM peak hour under Year 2030 Cumulative without and with project conditions. This constitutes an adverse effect on intersection operations based on the City of Morgan Hill's level of service standards.

The signalization of the intersection would be necessary to improve intersection operations. Implementation of this improvement would improve the intersection's level of service to LOS B during the AM peak hour under Year 2030 Cumulative with project conditions.

Freeway Segment Evaluation

The City is still required to conform to the requirements of the Valley Transit Authority (VTA) which establishes a uniform program for evaluating the transportation impacts of land use decisions on the designated CMP Roadway System. The VTA's Congestion Management Program (CMP) has yet to

adopt and implement guidelines and standards for the evaluation of the CMP roadway system using VMT. Therefore, the effects of the proposed project on freeway segments in the vicinity of the project area following the current methodologies, as outlined in the *VTA Transportation Impact Analysis Guidelines*, were completed. However, this analysis is presented for informational purposes only. The following seven freeway segments were evaluated:

Study Freeway Segments

1. US 101 between SR-85 and Bailey Avenue
2. US 101 between Bailey Avenue and Coyote Creek Golf Drive
3. US 101 between Coyote Creek Golf Drive and Cochrane Road
4. US 101 between Cochrane Road and Dunne Avenue
5. US 101 between Dunne Avenue and Tennant Avenue
6. US 101 between Tennant Avenue and San Martin Avenue
7. US 101 between San Martin Avenue and Masten Avenue

Freeway Segment Level of Service Methodology

As prescribed in the CMP technical guidelines, the level of service for freeway segments is estimated based on vehicle density. Density is calculated by the following formula:

D = V / S
Where:
D= density, in vehicles per mile per lane (vpmpl)
V= peak hour volume, in vehicles per hour per lane (vphpl)
S= average travel speed, in miles per hour (mph)

The vehicle density on a segment is correlated to the level of service as shown in Table 7. The CMP specifies that a capacity of 2,300 vehicles per hour per lane (vphpl) be used for mixed-flow lane segments that are three lanes or wider in one direction, and a capacity of 2,200 vphpl be used for mixed-flow lane segments that are two lanes wide in one direction. A capacity of 1,650 vphpl was used for high occupancy vehicle (HOV) lanes. The CMP defines an acceptable level of service for freeway segments as LOS E or better.

Conformance to CMP Freeway Segment Standards

Based on CMP criteria, a project would fail to meet the CMP freeway segment standard if the additional project traffic caused one of the following during either peak hour:

1. The level of service on the freeway segment is an unacceptable LOS F under existing conditions, and the number of project trips on that segment constitutes at least one percent of capacity on that segment.
2. The level of service on the freeway segment degrades from an acceptable LOS E or better under existing conditions to an unacceptable LOS F under existing plus project conditions.

A significant adverse effect by CMP standards is said to be satisfactorily addressed when measures are implemented that would restore freeway conditions to existing conditions or better.

Table 7
Freeway Level of Service Definitions Based on Density

Level of Service	Description	Density (vehicles/mile/lane)
A	Average operating speeds at the free-flow speed generally prevail. Vehicles are almost completely unimpeded in their ability to maneuver within the traffic stream.	0-11
B	Speeds at the free-flow speed are generally maintained. The ability to maneuver within the traffic stream is only slightly restricted, and the general level of physical and psychological comfort provided to drivers is still high.	>11-18
C	Speeds at or near the free-flow speed of the freeway prevail. Freedom to maneuver within the traffic stream is noticeably restricted, and lane changes require more vigilance on the part of the driver.	>18-26
D	Speeds begin to decline slightly with increased flows at this level. Freedom to maneuver within the traffic stream is more noticeably limited, and the driver experiences reduced physical and psychological comfort levels.	>26-46
E	At this level, the freeway operates at or near capacity. Operations in this level are volatile, because there are virtually no usable gaps in the traffic stream, leaving little room to maneuver within the traffic stream.	>46-58
F	Vehicular flow breakdowns occur. Large queues form behind breakdown points.	>58

Freeway Segment Analysis

The results of the CMP freeway level of service analysis under existing plus project conditions are summarized in Table 8. Traffic volumes on the study freeway segments under existing plus project conditions were estimated by adding project trips to the existing volumes obtained from the 2018 CMP Monitoring and Conformance Report.

The results show that ten directional mixed-flow lanes and one directional HOV lane on the freeway segments analyzed are projected to operate at an unacceptable LOS F during at least one peak hour under existing conditions and would continue to operate at LOS F conditions with the addition of traffic due to proposed project. All other freeway segments analyzed operate at LOS E or better conditions during the AM and PM peak hours.

Improvement of freeway segment operations would require freeway widening to construct additional through lanes, thereby increasing freeway capacity. VTA's Valley Transportation Plan (VTP) 2040 identifies freeway express lane projects along US 101 between Cochrane Road and Whipple Avenue. The planned improvements consist of the conversion of the existing HOV lane to an express lane and the construction of a second express lane in each direction on US 101. These improvements would increase the capacity of the freeway and help to address the deficiency in freeway operations. However, it is not feasible for an individual development project to bear responsibility for implementing such extensive transportation system improvements due to constraints in the acquisition and cost of right-of-way.

Table 8
Freeway Segment Levels of Service

#	Freeway	Segment	Dir.	Peak Hour	Existing Plus Project												Project Trips			
					Mixed-Flow Lane						HOV Lane						Mixed-Flow Lane		HOV Lane

[2]Speed exceeds the bound of the equation used to derive volume and density.
Bold indicates unacceptable LOS.

5. Other Transportation Issues

This chapter presents an analysis of other transportation issues associated with the project site, including:

- Vehicular site access
- On-site circulation
- Intersection operations analysis – vehicle queuing and left-turn pocket storage at intersections
- Potential impacts to bike, pedestrian and transit facilities

Unlike the level of service impact methodology, which is adopted by the City Council, the analyses in this chapter are based on professional judgment in accordance with the standards and methods employed by the traffic engineering community.

Site Access and Circulation

The site plan for the proposed project was reviewed performed to determine if adequate site access is provided and to identify any access and circulation issues that should be improved. This review was completed in accordance with generally accepted traffic engineering standards.

Site Access

Project trips at each of the site access points are presented in Figure 13. The project would include the extension of DePaul Drive to the south with termination as a cul-de-sac just north of Half Road. Access to the project site would be provided via a full access driveway along Mission View Drive and two full access driveways along the DePaul Drive extension.

On-Site Circulation

An internal private street network would provide access to each of the residential units from the proposed entrances along Mission View Drive and DePaul Drive. Most of the streets that front homes include on-street parallel parking. The internal streets would provide continuous access to each area of residential units.

Figure 13
Project Trips at Site Access Points

Travel way on street is typically a minimum of 26 feet. The travel way on the internal streets is shown to be at least 20 feet wide. The narrower travel width will provide adequate width for two-way travel on each of the streets and will promote reduced travel speeds within the site. However, the straight nature of the internal roadways could result in drivers traveling at greater speeds than recommended. Therefore, it may be desirable to implement speed-reducing measures along the internal roadways. These measures could include the installation of speed bumps/humps along the internal roadways and/or bulb-outs at intersections and mid-block.

The project site plan shows sidewalks along the project's frontages along Mission View Drive and DePaul Drive and the internal street network on-site. However, there are no sidewalks provided along the west side of Mission View Drive between the project site and Cochrane Road. In conjunction with the existing sidewalks along the east side of Mission View Drive, the proposed sidewalks on Mission View Drive along the project frontage would provide a connection between the project site and bus stops along Mission View Drive and pedestrian destinations along Cochrane Road. There also are no sidewalks along either side of DePaul Drive between the project site and Cochrane Road. Therefore, there will be no sidewalk connection between the project site and Cochrane Road.

The project site should be designed following City of Morgan Hill design standards and provide adequate width and turn-radii at and along all drive/parking aisles to allow for two-way circulation and adequate circulation of larger vehicles (such as emergency trucks, garbage truck, and delivery trucks) throughout the project site. Adhering to the City of Morgan Hill standards and requirements, and implementing the above recommendations, the proposed site access points and layout of the surface parking areas would be adequate to accommodate the circulation of both passenger and emergency vehicles.

Emergency Vehicle Access and Circulation

The 20-foot-wide internal roadway would provide emergency vehicles (fire trucks) sufficient space to access each of the residential units on-site. There are several dead-end drive aisles that would not provide sufficient space for emergency vehicles to turn around. However, the dead-ends will be located along short segments of roadways. Thus, vehicles would be able to back out of the roadways.

Project Driveway Operations

Based on the project trip generation and trip assignment, it is estimated that a maximum of 79 and 88 inbound trips (during the PM peak hour) and 71 and 78 outbound trips (during the AM peak hour) would enter and exit the site at the Mission View Drive driveway and the two driveways on DePaul Drive combined, respectively. As proposed, each of the three project driveways would be provided with one outbound lane and one inbound lane to serve the shared through/right-turn lane and through/left-turn lane into the site on Mission View Drive and DePaul Drive. The estimated project trips at the project site driveways are shown in Figure 13. The results of the driveway operations analyses are summarized in Table 9. The calculations for the project driveway operations analyses are included in Appendix G.

The results of the level of service analysis indicate that all three project driveways are projected to operate at acceptable levels of service (LOS D or better) during each of the peak hours analyzed.

The results of the signal warrant analysis indicate all three project driveways are projected to have traffic conditions that fall below the thresholds that warrant signalization.

The results of the queuing analysis indicate the 95th percentile queues at the project driveways are projected to be at most 25 feet.

Table 9
Project Driveway Operations

Intersection	Int. Control	LOS Std	Peak Hour	Existing Plus Project								Year 2030 Cumulative with Project							
				Warrant Met?	Delay[1]	LOS	Queue Length (ft.) NBL	EB	SBL	WB		Warrant Met?	Delay[1]	LOS	Queue Length (ft.) NBL	EB	SBL	WB	
Mission View Drive and Project Driveway A	OWSC	D	AM	No	11.6	B	0	25	--	--		No	19.7	C	0	25	--	--	
			PM	No	14.2	B	25	25	--	--		No	31.1	D	25	25	--	--	
DePaul Drive and Project Driveway B	OWSC	D	AM	No	8.4	A	--	--	0	25		No	8.4	A	--	--	0	25	
			PM	No	8.4	A	--	--	25	25		No	8.4	A	--	--	25	25	
DePaul Drive and Project Driveway C	OWSC	D	AM	No	8.6	A	--	--	0	25		No	8.6	A	--	--	0	25	
			PM	No	8.5	A	--	--	25	0		No	8.5	A	--	--	25	0	

Notes:
[1]The reported delay and corresponding level of service for one-way stop-controlled intersections are based on the stop-controlled approach with the highest delay.
OWSC = one-way stop-controlled; NBL = northbound left; EB = eastbound; SBL = southbound left; WB = westbound

Recommendation: A center-striped median is currently provided along Mission View Drive north of the project site. The current width of Mission View Drive along the project frontage is not adequate to provide a left-turn pocket into the project driveway. Mission View Drive would need to be widened along its east side, opposite the project frontage, to provide a striped left-turn pocket into the project site. Similarly, left-turn lanes should be striped at the project driveways along DePaul Drive if a center-striped median is planned.

Intersection Operations Analysis

The analysis of the intersection level of service was supplemented with an analysis of intersection operations for selected intersections where the project would add a significant number of left-turning vehicles. The operations analysis is based on vehicle queuing for high demand left-turn movements at intersections. Vehicle queues were estimated using a Poisson probability distribution, which estimates the probability of "n" vehicles for a vehicle movement using the following formula:

$$P(x=n) = \frac{\lambda^n e^{-(\lambda)}}{n!}$$

Where:
P (x=n) = probability of "n" vehicles in queue per lane
n = number of vehicles in the queue per lane
λ = average number of vehicles in the queue per lane (vehicles per hour per lane/signal cycles per hour)

The basis of the analysis is as follows: (1) the Poisson probability distribution is used to estimate the 95th percentile number of queued vehicles per cycle for a particular movement; (2) the estimated maximum number of vehicles in the queue is translated into a queue length, assuming 25 feet per vehicle; and (3) the estimated 95th percentile queue length is compared to the existing or planned available storage capacity for the movement. This analysis thus provides a basis for estimating future left-turn storage requirements at intersections. The 95th percentile queue length value indicates that during the peak hour, a queue of this length or less would occur on 95 percent of the signal cycles. Likewise, a queue length larger than the 95th percentile queue would only occur on 5 percent of the signal cycles (about 3 cycles during the peak hour for a signal with a 60-second cycle length). Therefore, left-turn storage pocket designs based on the 95th percentile queue length would ensure that storage space would be exceeded only 5 percent of the time. The 95th percentile queue length is also known as the "design queue length".

The vehicle queue estimates and a tabulated summary of the findings are provided in Table 10. The vehicular queuing analysis (Poisson probability calculations) is included in Appendix F.

Cochrane Road and Mission View Drive

The queuing analysis indicates that the estimated 95th vehicle queue for northbound left-turn movement at the Cochrane Road and Mission View Drive intersection currently exceeds the provided turn pocket storage space during the AM and PM peak hours under existing conditions.

The northbound left-turn pocket currently provides approximately 100 feet of vehicle storage, which can accommodate approximately 4 vehicles. The estimated 95th percentile vehicle queues for the northbound left-turn movement currently are approximately 14 and 6 vehicles during the AM and PM peak hours under existing conditions, respectively.

Table 10

Adequate (Y/N)	YES	YES	**NO**	**NO**	YES	YES	YES	YES

Notes:
[1] Cycle length for signalized intersections and control delay for stop-controlled intersections.
[2] Assumes 25 feet per vehicle queued

The addition of project traffic is not projected to lengthen the projected queue during the AM peak hour. However, the addition of project traffic is projected to lengthen the projected queue by one vehicle or 25 feet during the PM peak hour under existing plus project conditions, which would exceed the existing storage capacity by 75 feet.

Recommendation: The northbound left-turn pocket can be lengthened by 250 feet to accommodate the projected queue during the AM peak hour. However, a second northbound left-turn lane is recommended to improve intersection operations.

Project-generated traffic at other locations would be too low to have a measurable effect on queue lengths.

Sight Distance

Adequate sight distance (sight distance triangles) should be provided at the project site driveways in accordance with the *Caltrans Highway Design Manual*. Sight distance triangles should be measured at the driveway approximately 10 feet back from the traveled way. Providing the appropriate sight distance reduces the likelihood of a collision at a driveway or intersection and provides drivers with the ability to exit a driveway and locate sufficient gaps in traffic. The minimum acceptable sight distance is often considered the Caltrans stopping sight distance. Sight distance requirements vary depending on the roadway speeds. DePaul Drive and Mission View Drive have posted speed limits of 35 and 40 mph, respectively. The Caltrans stopping sight distance for facilities with posted speed limits of 35 and 40 mph are 250 and 300 feet, respectively. Thus, a driver exiting the project driveways on DePaul Drive and Mission View Drive must be able to see approaching traffic on DePaul Drive and Mission View Drive at minimum distances of 250 and 300 feet, respectively, to be able to stop and avoid a collision.

Based on field observations, aerial images, and the location of the project driveways, there are no existing trees or visual obstructions along DePaul Drive and Mission View Drive that would obscure sight distance to drivers exiting the project site, providing a clear view of approaching traffic on both sides of DePaul Drive and Mission View Drive beyond the minimum required distances of 250 and 300 feet, respectively. Therefore, it can be concluded that the project access driveways would meet the Caltrans minimum stopping sight distance standards.

Recommendation: The site design should ensure design features, in particular, the landscaping and signage along the project site frontage and at the project site driveways, would not interfere with the sight distance at the proposed site driveway.

Parking

Based on Tables 18.72-2 and 18.72-3 of Section 18.72.030 of the Morgan Hill City Code, the project would be required to provide 2 covered parking spaces per residential unit and one guest parking space is required for every four residential units. The project would be required to provide 538 resident and 68 guest parking spaces for the proposed 269 residential units. The project is proposing to provide two covered parking spaces for each residential unit for a total of 538 parking spaces and 271 on-street parking spaces within the internal street network. Therefore, the provided number of parking spaces would satisfy the City's parking requirement.

Transit, Pedestrian, and Bicycle Analysis

The project site is served by Local Route 87 with bus stops along Mission View Drive and Half Road. In addition, Express Route 168 also provides service along Cochrane Road west of US 101. These two bus routes provide a connection to the Morgan Hill Caltrain Station. A conservative mode split in Morgan Hill would be a three percent transit share. Assuming up to three percent transit mode share for the project equates to no more than six and eight transit riders during the AM and PM peak hours, respectively.

VTA has recommended that a new bus stop for Route 87 be installed along Mission View Drive on the project frontage just south of the project entrance. VTA also has suggested a new bus stop be installed on the northbound side of Mission View Drive if a controlled crosswalk were to be installed at the project entrance along Mission view Drive. However, this analysis showed no need for signal control at the project entrance. It is recommended that the project coordinate with VTA to identify the specific placement of a new bus stop along Mission View Drive and allow for adequate space along its frontage on Mission View to accommodate the installation of a bus stop including wider sidewalks, lighting, landscaping, and passenger pad.

Sidewalks are provided along the east side of Mission View Drive and the north side of Cochrane Road in the immediate project area. However, sidewalks along the south side of Cochrane Road are intermittent, with no sidewalk currently provided between the US 101 northbound ramps and De Paul Drive, and a short segment west of Mission View Drive. The project would provide sidewalks along its entire frontages along Mission View Drive, Half Road, and DePaul Drive and result in a continuous connection to the existing sidewalks on the east side of Mission View Drive to provide a safe connection between the project site and other surrounding land uses in the area. Controlled crossings at the intersections of Cochrane Road with Mission View Drive and DePaul Drive would provide a connection between the project area and retail uses on the north side of Cochrane Road.

Bike lanes are currently provided along the entire lengths of Cochrane Road and Main Avenue. An unpaved bike path, the Madrone Channel Trail, runs along the east side of US 101, between Tennant Avenue and Cochrane Road. It is expected that bicycle trips would comprise no more than one percent of the total project-generated trips. Thus, the project could potentially generate no more than three new bicycle trips during each of the peak hours. The demand generated by the proposed project could be accommodated by the existing bicycle facilities in the vicinity of the project site.

Freeway Ramp Analysis

Freeway On-Ramp Queuing Analysis

An analysis of metered freeway ramps providing access to the project site was performed to identify the effect of the addition of project traffic on the queues at metered study freeway on-ramps. It should be noted that the evaluation of freeway ramps is not required based on the City's transportation analysis guidelines. Nor are there adopted methodologies and impact criteria for the analysis of freeway ramps. The project is expected to add peak hour trips to only the following metered freeway on-ramps in the project vicinity:

- US 101 northbound on-ramp from westbound Cochrane Road (Active Meter – AM Peak Hour)
- US 101 southbound on-ramp from westbound Cochrane Road (Active Meter – PM Peak Hour)
- US 101 southbound on-ramp from Dunne Avenue

The project is projected to add at most four trips to the US 101 southbound on-ramp from Dunne Avenue during the AM or PM peak hour and would not lengthen the projected queues at this location. Therefore, this ramp was not included in the queuing analysis.

The analysis indicates that project traffic would not lengthen the projected 15-minute interval queue lengths at either of the subject Cochrane Road on-ramps under existing plus project conditions. Short vehicle queues, less than 10 vehicles, currently occur at the ramps, however, the queues dissipate during the 15-minute intervals because the demand volume is less than the service rate of the freeway ramp meters.

The volumes on the northbound diagonal on-ramp from westbound Cochrane Road are projected to be greater than the service rate of the ramp meter during the AM peak hour under Year 2030 Cumulative with project conditions. Therefore, queues are projected to develop on the northbound diagonal on-ramp. Trips from the proposed project will result in an increase in the projected queue by two vehicles. However, the projected queues on the metered northbound diagonal on-ramp can be accommodated entirely on the ramp. The freeway on-ramp queuing calculations are included in Appendix H.

Freeway Off-Ramp Queuing Analysis

A queuing analysis was completed for freeway off-ramps, where the project will result in the addition of peak hour trips. These freeway off-ramps are controlled by a traffic signal at their intersection with the local arterial. The project is expected to add peak hour trips to only the following freeway off-ramps in the project vicinity:

- US 101 northbound off-ramp to Cochrane Road
- US 101 southbound off-ramp to Cochrane Road
- US 101 northbound off-ramp to Dunne Avenue

The project is projected to add at most four trips to the US 101 northbound off-ramp at Dunne Avenue during the AM or PM peak hour and would not lengthen the projected queues at this location. Therefore, this ramp was not included in the queuing analysis.

The results of the analysis (see Table 11) show that the 95th percentile queue lengths at each of the US 101 off-ramps to Cochrane Road are projected to be accommodated entirely on the ramps and would not extend back and disrupt the freeway mainline. The freeway off-ramp queuing calculations are included in Appendix H.

Table 11
Freeway Off-Ramp Vehicle Queuing Analysis

Scenario		Queue Length[1] (feet)			
		US 101 SB Off-Ramps and Cochrane Road		US 101 NB Off-Ramps and Cochrane Road

[2]SBL/R = southbound left/right; SBR = southbound right; NBL = northbound left; NBL/R = northbound left/right

6. Conclusions

The potential impacts of the project were evaluated in accordance with the California Environmental Quality Act (CEQA) guidelines and the Governor's Office of Planning and Research (OPR) *Technical Advisory on Evaluating Transportation Impacts in CEQA*, December 2018.

A supplemental traffic operations analysis also was completed to demonstrate the project's consistency with the *Morgan Hill 2035 General Plan* goals and policies. The traffic operations analysis supplements the CEQA required VMT analysis. However, the determination of project impacts per CEQA requirements is based solely on the VMT analysis.

CEQA VMT Analysis

The results of the VMT analysis using the VTA's VMT Evaluation Tool indicate that the existing VMT for residential uses in the project vicinity is 30.46 VMT per capita.

The results also indicate that the project is projected to generate VMT per capita (27.41), which would exceed the OPR's recommended impact threshold of 20.94 VMT per capita. Therefore, the project would result in an impact on the transportation system based on OPR's VMT impact criteria.

VMT Impacts and Mitigation

Using OPR's impact thresholds, the project would need to implement VMT reduction measures to achieve a 24% reduction (27.41 to 20.94) in its VMT per capita for the proposed residential uses to reduce its impact to less than significant levels. However, a maximum 11% reduction in project VMT is possible regardless of the extent of VMT reduction measures implemented.

OPR's recommended 15% below existing VMT impact threshold encourages developments in transit-rich, highly mixed-use areas to implement design features and trip reduction measures to take advantage of existing multi-model infrastructure and land use mixes in reducing trip making and/or trip lengths. However, many communities such as Morgan Hill have very limited multi-modal transportation infrastructure and lack a mix of complementary land uses. The lack of employment in these communities along with minimal transit options results in a greater number and longer commute trips. Therefore, it is highly unlikely that developments like the proposed project in these cities can achieve OPR's recommended 15% reduction in VMT. Therefore, absent of the City adopting its own City-specific VMT policies and impact thresholds, the proposed project's VMT impact must be deemed significant and unavoidable.

Per its condition of approval and prior to project occupancy, the project applicant shall develop and implement a Transportation Demand Management (TDM) plan which targets a reduction in residential vehicle trips to and from the site. The TDM plan shall be prepared by a qualified traffic consultant and in coordination with the City of Morgan Hill Development Services Director or Designee. The TDM plan shall quantify the reduction in VMT. The TDM shall require the following measures:

1. Prior to project occupancy, the project applicant will be required to make a financial contribution to the City's on-site demand rideshare service (MoGo), as a one-time or annual financial contribution based on City approval, **or**
~~Per its condition of approval, the City will however require that the project implement and/or incorporate in its design the following VMT reduction measures to encourage the use of multi-modal travel and reduce the number and length of vehicular trips:~~

2. During project operations, t~~T~~he management entity/HOA shall provide fully (100 percent) subsidized annual VTA transit passes for all project homeowners (a maximum of one transit subsidy per residential unit, which would result in up to 269 transit passes per year). This subsidized transit program shall be approved by the City of Morgan Hill's Public Services Director prior to issuance of occupancy.

3. The project must improve the surrounding pedestrian network by including sidewalks which terminate at the common property line, allowing for connections to the adjacent property in the event there is development in the future. Continuous sidewalks are proposed along the project frontages. The proposed frontage improvements along Mission View Drive, Half Road, and De Paul Drive include sidewalk improvements; each of the street sections will be wide enough to accommodate future bicycle lanes.

4. The proposed development will include 64 bicycle parking spaces.

Traffic Operations Analysis

Project Trip Generation

Based on the recommended rates for single-family detached housing (Land Use #210) and the size of the proposed project, it is estimated that the proposed project would generate 2,539 daily trips, with 199 trips (50 inbound and 149 outbound) occurring during the AM peak hour and 266 trips (168 inbound and 98 outbound) occurring during the PM peak hour.

Intersection Operations Analyses

The results of the traffic operations analysis indicate that based on the City's operating standards, the proposed project would have an adverse effect on intersection operations at the following four study intersections under Year 2030 Cumulative with project conditions.

6. Mission View Drive and Cochrane Road (AM & PM Peak Hours)
8. Mission View Drive and Half Road (unsignalized) (AM & PM Peak Hours)
9. Condit Road and Main Avenue (PM Peak Hour)
10. Condit Road and Diana Avenue (unsignalized) (AM Peak Hour)

Adverse Intersection Operations Effects and Potential Improvements

The adverse intersection operation effects identified under Year 2030 Cumulative with project conditions are discussed below. Included are descriptions of the adverse effects on intersection operations and potential improvement measures that may be included as part of the project's Conditions of Approval. However, the identified roadway operations and improvements are not required or considered project impacts per CEQA guidelines.

6. Cochrane Road and Mission View Drive

This intersection is projected to operate at an unacceptable LOS F and E during the AM and PM peak hours, respectively, under Year 2030 Cumulative without project conditions. Traffic associated with the proposed project would cause the critical delay to increase by more than four seconds and the volume-to-capacity ratio (V/C) to increase by more than 0.01 during both the AM and PM peak hours. This constitutes an adverse effect on intersection operations based on the City of Morgan Hill's level of service standards.

The addition of a second northbound left-turn lane on Mission View Drive and a cycle length adjustment would be necessary to improve intersection operations. The addition of the second northbound left-turn lane will require lane striping and signal modification but will fit within the existing curb-to-curb pavement width on Mission View Drive. Implementation of this improvement would improve the intersection's level of service to LOS C during both the AM and PM peak hours under Year 2030 Cumulative with project conditions.

8. Mission View Drive and Half Road

This intersection is projected to operate at an unacceptable LOS F during the PM peak hour under Year 2030 Cumulative without and with project conditions. Furthermore, this intersection is projected to operate at an acceptable LOS D during the AM peak hour under Year 2030 Cumulative without conditions and degrade to LOS E with the addition of project traffic. Additionally, the peak-hour traffic signal warrant checks indicate that the intersection would have traffic volumes that meet thresholds that warrant signalization during both the AM and PM peak hours under Year 2030 Cumulative without and with project conditions. This constitutes an adverse effect on intersection operations based on the City of Morgan Hill's level of service standards.

The signalization of the intersection would be necessary to improve intersection operations. Implementation of a traffic signal at this location would improve the level of service to LOS C during both the AM and PM peak hours under Year 2030 Cumulative with project. This intersection is under the jurisdiction of both the City of Morgan Hill and Santa Clara County. Therefore, implementation of the recommended improvements will require City and County approval.

9. Main Avenue and Condit Road

This intersection is projected to operate at an unacceptable LOS F during the PM peak hour under Year 2030 Cumulative without project conditions. Traffic associated with the proposed project would cause the critical delay to increase by more than four seconds and the volume-to-capacity ratio (V/C) to increase by more than 0.01 during the PM peak hour. This constitutes an adverse effect on intersection operations based on the City of Morgan Hill's level of service standards.

The addition of an exclusive southbound right-turn lane on Condit Road would be necessary to improve intersection operations. The addition of the right-turn lane will require signal modifications and lane striping on the southbound approach. Implementation of this improvement would improve the intersection's level of service to LOS D during the PM peak hour under Year 2030 Cumulative with project conditions. This intersection is under the jurisdiction of both the City of Morgan Hill and Santa Clara County. Therefore, implementation of the recommended improvements will require City and County approval.

10. Condit Road and Diana Avenue

This intersection is projected to operate at an unacceptable LOS E during the AM peak hour under Year 2030 Cumulative without and with project conditions. Additionally, the peak-hour traffic signal

warrant checks indicate that the intersection would have traffic volumes that meet thresholds that warrant signalization during the AM peak hour under Year 2030 Cumulative without and with project conditions. This constitutes an adverse effect on intersection operations based on the City of Morgan Hill's level of service standards.

The signalization of the intersection would be necessary to improve intersection operations. Implementation of this improvement would improve the intersection's level of service to LOS B during the AM peak hour under Year 2030 Cumulative with project conditions.

Freeway Segment Level of Service Analysis

The results of the freeway segment level of service analysis indicate that ten directional mixed-flow lanes and one directional HOV lane on the freeway segments analyzed are projected to operate at an unacceptable LOS F during at least one peak hour under existing conditions and would continue to operate at LOS F conditions with the addition of traffic due to proposed project.

Improvement of freeway segment operations would require freeway widening to construct additional through lanes, thereby increasing freeway capacity. VTA's Valley Transportation Plan (VTP) 2040 identifies freeway express lane projects along US 101 between Cochrane Road and Whipple Avenue. The planned improvements consist of the conversion of the existing HOV lane to an express lane and the construction of a second express lane in each direction on US 101. These improvements would increase the capacity of the freeway and help to address the deficiency in freeway operations. However, it is not feasible for an individual development project to bear responsibility for implementing such extensive transportation system improvements due to constraints in the acquisition and cost of right-of-way.

Other Transportation Issues

Site Access

The project would include the extension of DePaul Drive to the south with termination as a cul-de-sac just north of Half Road. Access to the project site would be provided via a full access driveway along Mission View Drive and two full access driveways along the DePaul Drive extension.

On-Site Circulation

An internal private street network would provide access to each of the residential units from the proposed entrances along Mission View Drive and DePaul Drive. Most of the streets that front homes include on-street parallel parking. The internal streets would provide continuous access to each area of residential units.

Travel way on street is typically a minimum of 26 feet. The travel way on the internal streets is shown to be at least 20 feet wide. The narrower travel width will provide adequate width for two-way travel on each of the streets and will promote reduced travel speeds within the site. However, the straight nature of the internal roadways could result in drivers traveling at greater speeds than recommended. Therefore, it may be desirable to implement speed-reducing measures along the internal roadways. These measures could include the installation of speed bumps/humps along the internal roadways and/or bulb-outs at intersections and mid-block.

The project site plan shows sidewalks along the project's frontages along Mission View Drive and DePaul Drive and the internal street network on-site. However, there are no sidewalks provided along

the west side of Mission View Drive between the project site and Cochrane Road. In conjunction with the existing sidewalks along the east side of Mission View Drive, the proposed sidewalks on Mission View Drive along the project frontage would provide a connection between the project site and bus stops along Mission View Drive and pedestrian destinations along Cochrane Road. There also are no sidewalks along either side of DePaul Drive between the project site and Cochrane Road. Therefore, there will be no sidewalk connection between the project site and Cochrane Road.

The project site should be designed following City of Morgan Hill design standards and provide adequate width and turn-radii at and along all drive/parking aisles to allow for two-way circulation and adequate circulation of larger vehicles (such as emergency trucks, garbage truck, and delivery trucks) throughout the project site. Adhering to the City of Morgan Hill standards and requirements, and implementing the above recommendations, the proposed site access points and layout of the surface parking areas would be adequate to accommodate the circulation of both passenger and emergency vehicles.

Emergency Vehicle Access and Circulation

The 20-foot-wide internal roadway would provide emergency vehicles (fire trucks) sufficient space to access each of the residential units on-site. There are several dead-end drive aisles that would not provide sufficient space for emergency vehicles to turn around. However, the dead-ends will be located along short segments of roadways. Thus, vehicles would be able to back out of the roadways.

Intersection Operations Analysis

The queuing analysis also indicates that the maximum vehicle queue for northbound left-turn movement at the Cochrane Road and Mission View Drive intersection currently exceeds the provided turn pocket storage space during the AM and PM peak hours under existing conditions.

The addition of project traffic is not projected to lengthen the projected queue during the AM peak hour. However, the addition of project traffic is projected to lengthen the projected queue by one vehicle or 25 feet during the PM peak hour under existing plus project conditions, which would exceed the existing storage capacity by 75 feet.

Recommendation: The northbound left-turn pocket can be lengthened by 250 feet to accommodate the projected queue during the AM peak hour. However, a second northbound left-turn lane is recommended to improve intersection operations.

Project Driveway Operations

The results of the project driveway operations analysis indicate that all three project driveways are projected to operate at acceptable levels of service (LOS D or better) during each of the peak hours analyzed and to have traffic conditions that fall below the thresholds that warrant signalization. Additionally, the 95th percentile queues at the project driveways are projected to be at most 25 feet.

Recommendation: A center-striped median is currently provided along Mission View Drive north of the project site. The current width of Mission View Drive along the project frontage is not adequate to provide a left-turn pocket into the project driveway. Mission View Drive would need to be widened along its east side, opposite the project frontage, to provide a striped left-turn pocket into the project site. Similarly, left-turn lanes should be striped at the project driveways along DePaul Drive if a center-striped median is planned.

Sight Distance

Based on Caltrans requirements, the available sight distance at the project site driveways on DePaul Drive and Mission View Drive would be adequate.

Recommendation: The site design should ensure design features, in particular, the landscaping and signage along the project site frontage and at the project site driveways, would not interfere with the sight distance at the proposed site driveway.

Parking

Based on Tables 18.72-2 and 18.72-3 of Section 18.72.030 of the Morgan Hill City Code, the project would be required to provide 2 covered parking spaces per residential unit and one guest parking space is required for every four residential units. The project would be required to provide 538 resident and 68 guest parking spaces for the proposed 269 residential units. The project is proposing to provide two covered parking spaces for each residential unit for a total of 538 parking spaces and 271 on-street parking spaces within the internal street network. Therefore, the provided number of parking spaces would satisfy the City's parking requirement.

Transit, Pedestrian, and Bicycle Analysis

The project site is served by Local Route 87 with bus stops along Mission View Drive and Half Road. In addition, Express Route 168 also provides service along Cochrane Road west of US 101. These two bus routes provide a connection to the Morgan Hill Caltrain Station. A conservative mode split in Morgan Hill would be a three percent transit share. Assuming up to three percent transit mode share for the project equates to no more than six and eight transit riders during the AM and PM peak hours, respectively.

VTA has recommended that a new bus stop for Route 87 be installed along Mission View Drive on the project frontage just south of the project entrance. VTA also has suggested a new bus stop be installed on the northbound side of Mission View Drive if a controlled crosswalk were to be installed at the project entrance along Mission view Drive. However, this analysis showed no need for signal control at the project entrance. It is recommended that the project coordinate with VTA to identify the specific placement of a new bus stop along Mission View Drive and allow for adequate space along its frontage on Mission View to accommodate the installation of a bus stop including wider sidewalks, lighting, landscaping, and passenger pad.

Sidewalks are provided along the east side of Mission View Drive and the north side of Cochrane Road in the immediate project area. However, sidewalks along the south side of Cochrane Road are intermittent, with no sidewalk currently provided between the US 101 northbound ramps and De Paul Drive, and a short segment west of Mission View Drive. The project would provide sidewalks along its entire frontages along Mission View Drive, Half Road, and DePaul Drive and result in a continuous connection to the existing sidewalks on the east side of Mission View Drive to provide a safe connection between the project site and other surrounding land uses in the area. Controlled crossings at the intersections of Cochrane Road with Mission View Drive and DePaul Drive would provide a connection between the project area and retail uses on the north side of Cochrane Road.

Bike lanes are currently provided along the entire lengths of Cochrane Road and Main Avenue. An unpaved bike path, the Madrone Channel Trail, runs along the east side of US 101, between Tennant Avenue and Cochrane Road. It is expected that bicycle trips would comprise no more than one percent of the total project-generated trips. Thus, the project could potentially generate no more than three new

bicycle trips during each of the peak hours. The demand generated by the proposed project could be accommodated by the existing bicycle facilities in the vicinity of the project site.

Freeway Ramp Analysis

Freeway On-Ramp Queuing Analysis

The analysis indicates that project traffic would not lengthen the projected 15-minute interval queue lengths at either of the subject Cochrane Road on-ramps under existing plus project conditions. Short vehicle queues, less than 10 vehicles, currently occur at the ramps, however, the queues dissipate during the 15-minute intervals because the demand volume is less than the service rate of the freeway ramp meters.

The volumes on the northbound diagonal on-ramp from westbound Cochrane Road are projected to be greater than the service rate of the ramp meter during the AM peak hour under Year 2030 Cumulative with project conditions. Therefore, queues are projected to develop on the northbound diagonal on-ramp. Trips from the proposed project will result in an increase in the projected queue by two vehicles. However, the projected queues on the metered northbound diagonal on-ramp can be accommodated entirely on the ramp.

Freeway Off-Ramp Queuing Analysis

The results of the analysis show that the 95th percentile queue lengths at each of the US 101 off-ramps to Cochrane Road are projected to be accommodated entirely on the ramps and would not extend back and disrupt the freeway mainline.

Analysis Details

Santa Clara Countywide VMT Evaluation Tool Version: 1

Data Version: VTA Countywide Model December 2019

Analysis Methodology: Parcel Buffer Method

Baseline Year: 2019

Project Land Use

Residential:

Single Family DU: 269

Multifamily DU:

Total DUs: 269

Non-Residential:

Office KSF:

Local Serving Retail KSF:

Industrial KSF:

Residential Affordability (percent of all units):

Extremely Low Income: 0 %

Very Low Income: 0 %

Low Income: 15 %

Parking:

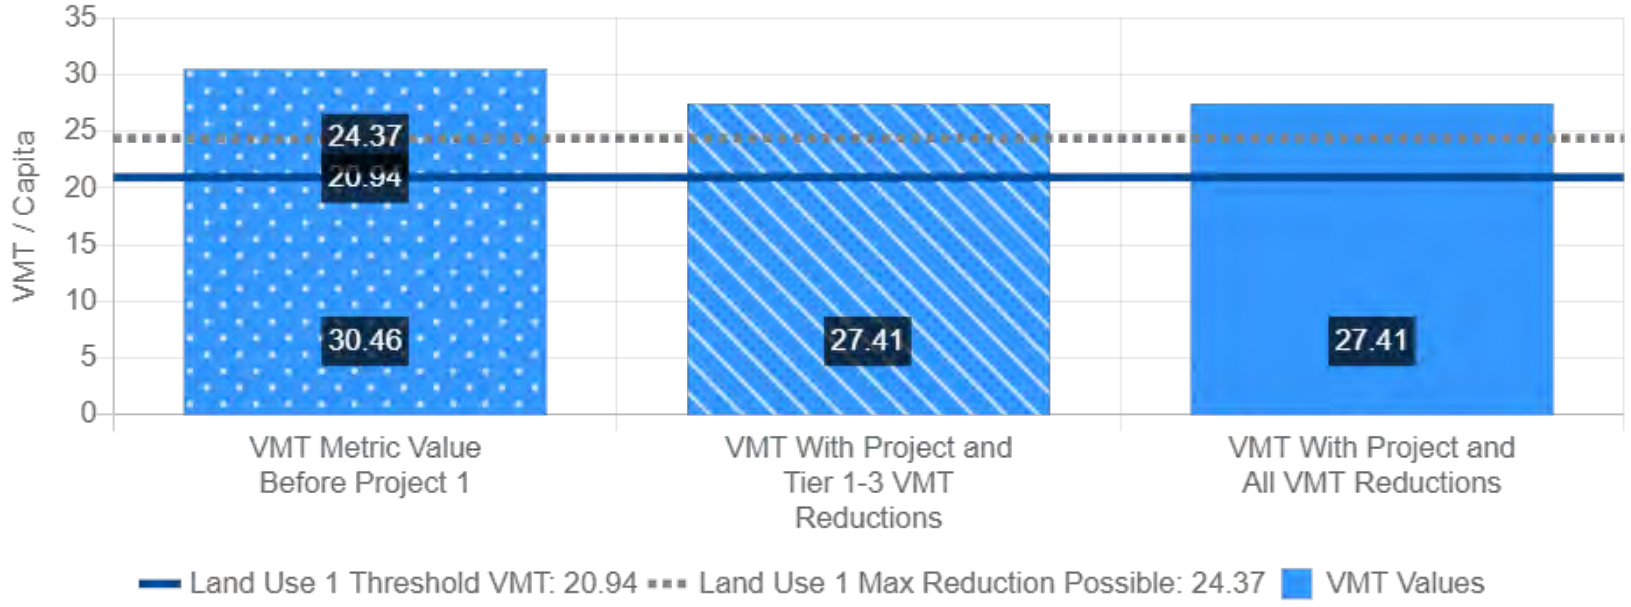
Motor Vehicle Parking:

Bicycle Parking:

Residential Vehicle Miles Traveled (VMT) Screening Results

Land Use Type 1:	Residential
VMT Without Project:	Home-based VMT per Capita
VMT Baseline Description 1:	City Average
VMT Baseline Value 1:	24.64
VMT Threshold Description 1:	-15%
Land Use 1 has been Pre-Screened by the Local Jurisdiction:	N/A

	Without Project	With Project & Tier 1-3 VMT Reductions	With Project & All VMT Reductions
Project Generated Vehicle Miles Traveled (VMT) Rate	30.46	27.41	27.41
Low VMT Screening Analysis	No (Fail)	No (Fail)	No (Fail)



Tier 1 Project Characteristics

PC01 Increase Residential Density

Existing Residential Density:	2.28
With Project Residential Density:	4.09

PC02 Increase Residential Diversity

Existing Residential Diversity Index:	0.71
With Project Residential Diversity Index:	0.55

PC03 Affordable Housing

Low Income:	15 %

PC04 Increase Employment Density

Existing Employment Density:	11.62
With Project Employment Density:	11.62

Santa Clara Countywide VMT Evaluation Tool Report

Project Details

Timestamp of Analysis: December 22, 2020, 11:01:57 PM

Project Name: The Crosswinds Residential Development

Project Description: 269 residential units comprised of 149condos, 56 single-family detached, and64 duet units

Project Location

Jurisdiction:
Morgan Hill

Inside Transit Priority Area (TPA)?
No (Fail)

APN	TAZ
72830001	333
72830003	333
72830002	333
72830004	333

Signal Warrant Analysis

The Crosswinds Residential Development

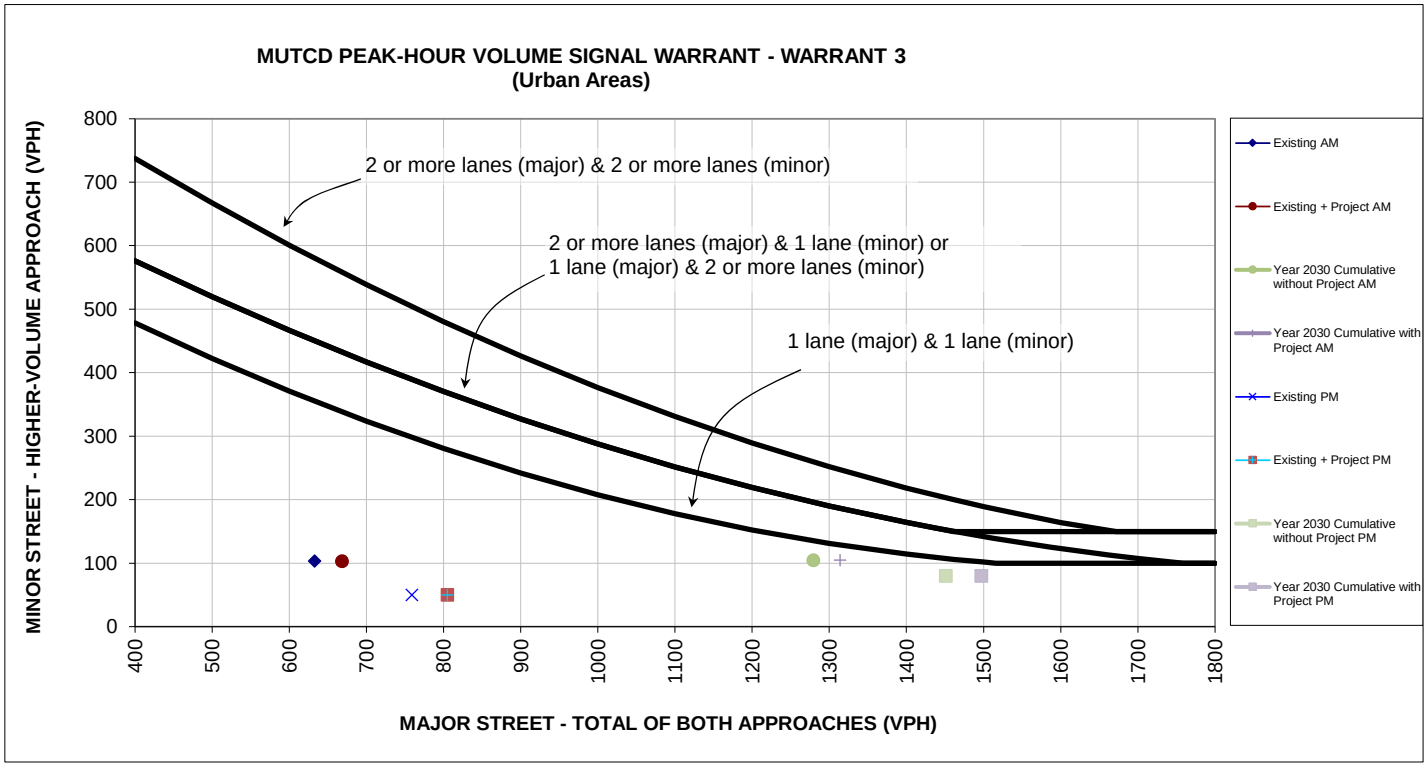
7 . Mission View Drive and Avenida De Los Padres



Source: Figure 4C-3 of the Manual on Unifrom Traffic Control and Devices (MUTCD) from California Department of Transportation (Caltrans).
* 150 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 100 vph applies as the lower threshold volume for a minor-street approach with one lane.

		Approach Lanes: One	Approach Lanes: 2 or More	Existing AM	Existing + Project AM	Year 2030 Cumulative without Project AM	Year 2030 Cumulative with Project AM
Major Street - Both Approaches	Avenida De Los Padres	X		633	668	1279	1314
Minor Street - Highest Approach	Mission View Drive	X		103	103	105	105
Maximum warrant threshold for minor street volume				355	338	135	128
Difference between warrant threshold & minor street volume				252	235	30	23
		Warrant Met?		No	No	No	No

		Approach Lanes: One	Approach Lanes: 2 or More	Existing PM	Existing + Project PM	Year 2030 Cumulative without Project PM	Year 2030 Cumulative with Project PM
Major Street - Both Approaches	Avenida De Los Padres	X		759	805	1451	1497
Minor Street - Highest Approach	Mission View Drive	X		50	50	80	80
Maximum warrant threshold for minor street volume				298	279	107	102
Difference between warrant threshold & minor street volume				248	229	27	22
		Warrant Met?		No	No	No	No

The Crosswinds Residential Development

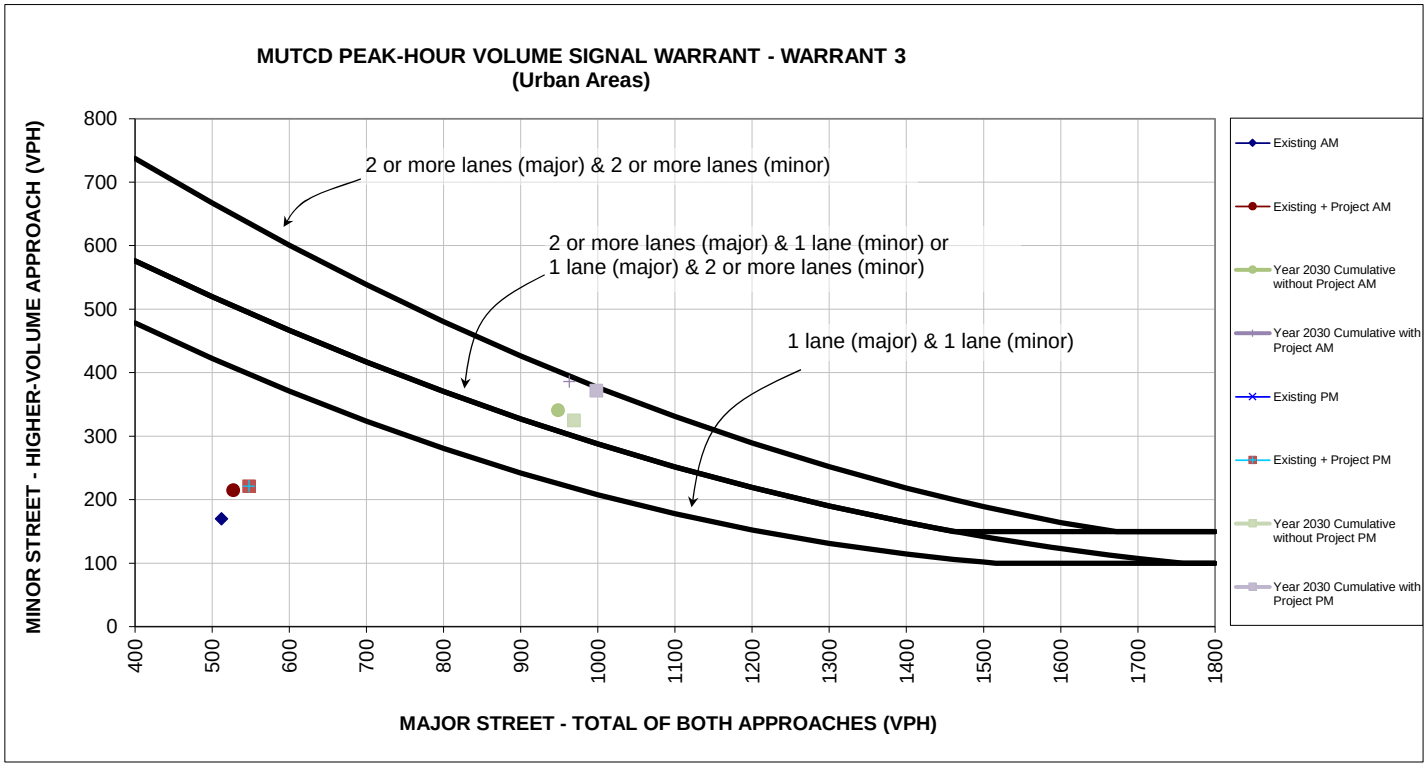
8 . Mission View Drive and Half Road



Source: Figure 4C-3 of the Manual on Unifrom Traffic Control and Devices (MUTCD) from California Department of Transportation (Caltrans).
* 150 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 100 vph applies as the lower threshold volume for a minor-street approach with one lane.

		Approach Lanes: One	Approach Lanes: 2 or More	Existing AM	Existing + Project AM	Year 2030 Cumulative without Project AM	Year 2030 Cumulative with Project AM
Major Street - Both Approaches	Mission View Drive	X		512	527	948	963
Minor Street - Highest Approach	Half Road	X		170	215	341	386
Maximum warrant threshold for minor street volume				416	408	225	220
Difference between warrant threshold & minor street volume				246	193	116	166
		Warrant Met?		No	No	**Yes**	**Yes**

		Approach Lanes: One	Approach Lanes: 2 or More	Existing PM	Existing + Project PM	Year 2030 Cumulative without Project PM	Year 2030 Cumulative with Project PM
Major Street - Both Approaches	Mission View Drive	X		268	548	969	998
Minor Street - Highest Approach	Half Road	X		519	221	325	372
Maximum warrant threshold for minor street volume				559	397	218	208
Difference between warrant threshold & minor street volume				40	176	107	164
		Warrant Met?		No	No	**Yes**	**Yes**

The Crosswinds Residential Development

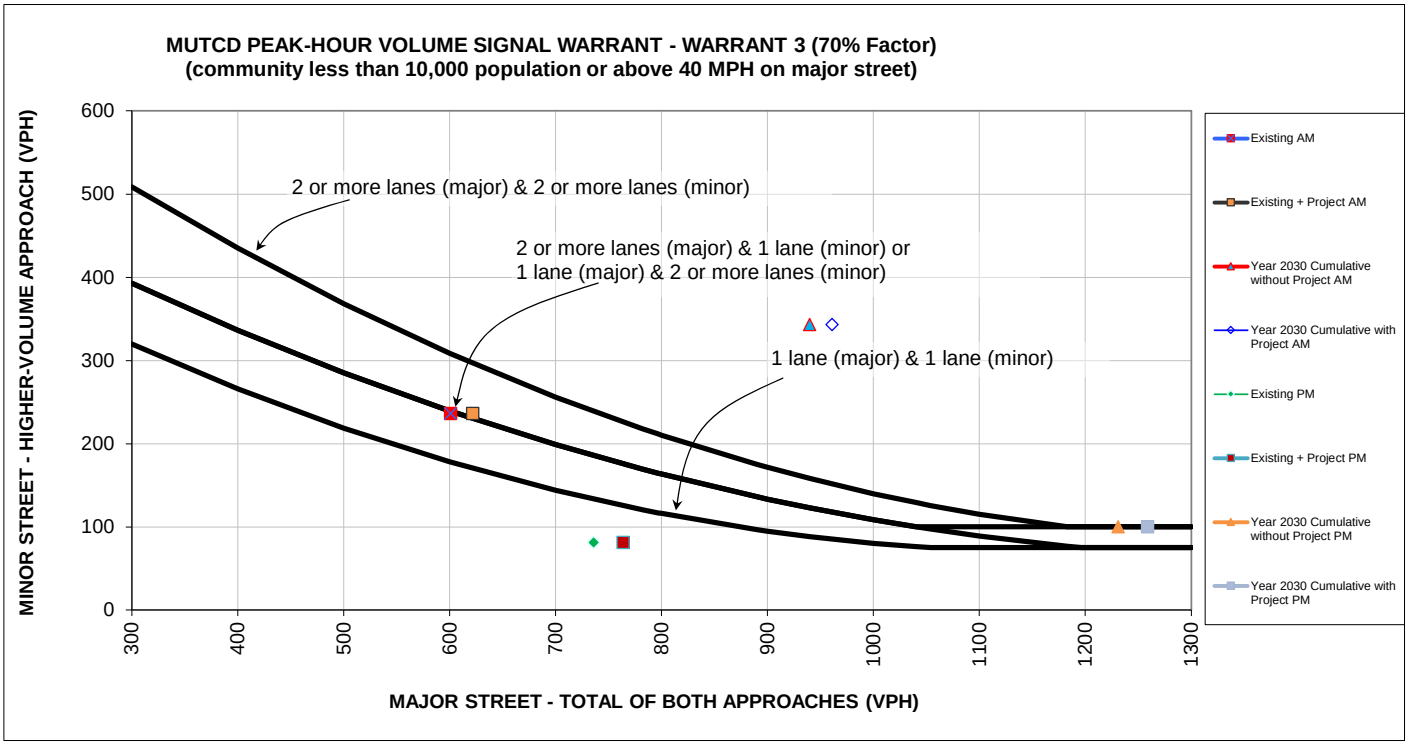
10 . Condit Road and Diana Avenue



Source: Figure 4C-4 of the Manual on Unifrom Traffic Control and Devices (MUTCD) from California Department of Transportation (Caltrans).
* 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

		Approach Lanes: One	Approach Lanes: 2 or More	Existing AM	Existing + Project AM	Year 2030 Cumulative without Project AM	Year 2030 Cumulative with Project AM
Major Street - Both Approaches	Diana Avenue	X		601	622	940	961
Minor Street - Highest Approach	Condit Road	X		236	236	343	343
Maximum warrant threshold for minor street volume				178	170	88	85
Difference between warrant threshold & minor street volume				58	66	255	258
		Warrant Met?		**Yes**	**Yes**	**Yes**	**Yes**

		Approach Lanes: One	Approach Lanes: 2 or More	Existing PM	Existing + Project PM	Year 2030 Cumulative without Project PM	Year 2030 Cumulative with Project PM
Major Street - Both Approaches	Diana Avenue	X		736	764	1231	1259
Minor Street - Highest Approach	Condit Road	X		81	81	100	100
Maximum warrant threshold for minor street volume				133	125	75	75
Difference between warrant threshold & minor street volume				52	44	25	25
		Warrant Met?		No	No	**Yes**	**Yes**

ERRATA

Crosswinds Residential Project
Environmental Impact Report (SCH No. 2021010358)
May 10, 2023

BACKGROUND AND PURPOSE OF ERRATA

The Draft Environmental Impact Report (Draft EIR) for the Crosswinds Residential project was published for public review on November 4, 2022. The public review period ended on January 3, 2023. A Final EIR, which included formal responses to public comments received on the Draft EIR and text revisions to the Draft EIR, was published for public review on May 3, 2023.

The purpose of this errata document to the Draft EIR is to make a clarification regarding the project's VMT reduction with the implementation of mitigation measures.

CEQA Guidelines Section 15088.5 requires that a lead agency recirculate an EIR when:

(a) A lead agency is required to recirculate an EIR when significant new information is added to the EIR after public notice is given of the availability of the draft EIR for public review under Section 15087 but before certification. As used in this Section, the term "information" can include changes in the project or environmental setting as well as additional data or other information. New information added to an EIR is not "significant" unless the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the project's proponents have declined to implement. "Significant new information" requiring recirculation includes, for example, a disclosure showing that:
    (1) A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.
    (2) A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.
    (3) A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the environmental impacts of the project, but the project's proponents decline to adopt it.
    (4) The Draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded.

(b) Recirculation is not required where the new information added to the EIR merely clarifies or amplifies or makes insignificant modifications in an adequate EIR.
(c) If the revision is limited to a few chapters or portions of the EIR, the lead agency need only recirculate the chapters or portions that have been modified.
(d) Recirculation of an EIR requires notice pursuant to Section 15087, and consultation pursuant to Section 15086.

(e) A decision not to recirculate an EIR must be supported by substantial evidence in the administrative record.
(f) The lead agency shall evaluate and respond to comments as provided in Section 15088. Recirculating an EIR can result in the lead agency receiving more than one set of comments from reviewers. The following are two ways in which the lead agency may identify the set of comments to which it will respond. This dual approach avoids confusion over whether the lead agency must respond to comments which are duplicates or which are no longer pertinent due to revisions to the EIR. In no case shall the lead agency fail to respond to pertinent comments on significant environmental issues.

EIR TEXT REVISIONS

The following text revisions reflect minor updates made to the VMT discussion in the Appendix G Transportation Analysis of the Draft EIR, after the Draft EIR and Final EIR were published. Deletions are shown with ~~a line through the text~~ and new text is shown with underlining.

Draft EIR, page 194 **REVISE** the text in the second paragraph as follows:

The provision of fully (100 percent) subsidized annual VTA transit passes for all project homeowners under mitigation MM TRN-2.1 could reduce the project's VMT per resident from 27.41 to 27.37.[a] VTA's VMT tool does not include a feature which calculates VMT reduction from the project applicant's contribution to the City's on-site demand rideshare service. ~~Although implementation of the above mitigation measure MM TRN-2.1 could reduce the number of trips generated by the project, by approximately 10 trips per day, the project's overall VMT would remain at 27.41 per resident.~~ The project design features would encourage the use of pedestrian and bicycle facilities, but not to a degree which would have any measurable effect on project VMT. ~~However,~~ Therefore, the project VMT would continue to be above the 20.94 VMT per capita threshold~~. The project, therefore,~~ and would result in a significant and unavoidable VMT impact (under Options 1 and 2). **(Significant and Unavoidable Impact with Mitigation)**

CONCLUSION

Recirculation of the Draft EIR for the project is not required pursuant to CEQA. The above text revisions are minor and do not represent substantial new information. The revisions would not alter the analysis, conclusions, or findings of the Draft EIR.

In conformance with Section 15121 of the CEQA Guidelines, the Draft EIR (including associated technical appendices and reports), Final EIR, together with the information contained in this Errata are intended to inform the decision-makers and the public of the environmental effects of the Crosswinds Residential project.

Re: Mission View Drive and Cochrane Road
SD2020-0003/SR2020-0010/EA2020-0007

Dear Morgan Hill Planning Commission,

YIMBY Law is a 501(c)3 non-profit corporation, whose mission is to increase the accessibility and affordability of housing in California. YIMBY Law sues municipalities when they fail to comply with state housing laws, including the Housing Accountability Act (HAA). As you know, the Planning Commission has an obligation to abide by all relevant state housing laws when evaluating the above captioned proposal, including the HAA. Should the City fail to follow the law, YIMBY Law will not hesitate to file suit to ensure that the law is enforced.

This project will include 269 for-sale homes with a 15% on-site affordability component. It will include three different housing types, allowing different, unique options for future homebuyers. The home types include detached courtyard homes, duets, and townhome style condos.

California Government Code § 65589.5, the Housing Accountability Act, prohibits localities from denying housing development projects that are compliant with the locality's zoning ordinance or general plan at the time the application was deemed complete, unless the locality can make findings that the proposed housing development would be a threat to public health and safety.

The above captioned proposal is zoning compliant and general plan compliant, therefore, your local agency must approve the application, or else make findings to the effect that the proposed project would have an adverse impact on public health and safety, as described above. Should the City fail to comply with the law, YIMBY Law will not hesitate to take legal action to ensure that the law is enforced.

I am signing this letter both in my capacity as the Executive Director of YIMBY Law, and as a resident of California who is affected by the shortage of housing in our state.

Sincerely,

Sonja Trauss
Executive Director
YIMBY Law
